Scientist Explains the Reason of Their Presence There.

"Amazing!" said a scientist, "is the popularity of the belief that toads live for long spaces of time in rocks. Only last week a quarryman sent to me a toad that he had found imbedded, he said, in a solid block of stone. Of course there is no truth in the idea that these reptiles can exist shut up for years without food and air, but there is truth in the stories of their being found in rocks. The rocks, though, are not solid, as the finders only been in them, it is probable, for a few hours instead of for years and years. Toads, you see, take naturally to sequestered places-to clifts in rocks or trees. A guarryman or a lumberman breaks into a rock or a tree, finds a live toad imbedded and thinks the reptile has been there since time began. As a matter of fact the toad has but recently crawled there through a little passage of some sort, but the passage is so well concealed that the eyes of the man have failed to discern it."

Coleridge Neb., Dec. 13, 1902.

Sirs :- I can say that I am more than pleased with Liquid Koal. A. year ago last October my hogs took sick and I tried every thing I could think of but no good came of it. So your agent Kirkpatrick came along and I took a can of Liquid Koal. I had about 90 hogs all sick, I shut them up in a small pen and made every hog take his medicine and I saved one half of my hogs. If I had not used Liquid Koal I am sure I would not have saved a hog. I think a man stands in his own light that does not keep Liquid Koal on hand. Use this as you see fit.
