Flat-Headed Apple Tree Borer. This is a very abundant insect, though it is not so destructive as the round-headed borer. The adult insect measures about half an inch in length. It is flattened above, resem bling a snapping beetle. The antennae are short, the eyes large and the forelegs are armed in front with a conspicuous tooth. The upper surface of the body is dark metallic brown, and fresh specimens are coated here and there with a powdery gray substance, which is easily rubbed off.

Unlike the round-headed borer, this insect works in the day time, being most active in the heat of the day. It is also frequently found on prostrate trees basking in the sun. The beetles are active creatures, running rapidly and flying readily. This species

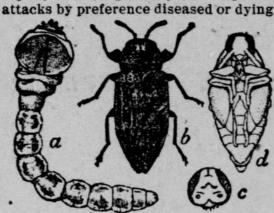

Fig. 3.—Chrysobothris femorata: a, larva; b, beetle; c, head of male; d, pupa—twice natural size (original).

trees, inhabits all parts of a tree from the base of the trunk to the limbs ers on this point. and is not restricted in its ravages to fruit trees.

It is injurious chiefly to young trees, its injuries being practically confined to newly-planted nursery stock and to trees that have been weakened through any cause, such as careless pruning or insufficient nourishment due to poor soil or drouth. Some writers claim that healthy trees are not injured at all.

It is a well-known fact that many forms of boring insects prefer injured plants, but when these are wanting do not hesitate to attack perfectly sound growth, and records show conclusively that the present species is .ncluded in this category.

Infestation may be detected by the discoloration of the bark. Give the orchard good care, feeding the trees freely through their roots, and little damage will result. Washes of various kinds are good for the trees, especially the lime wash. These check borers.

Mildew on Gooseberries.

For a long time it was impossible to raise the large English varieties of gooseberry in this country, on account of the tendency to mildew; now the cause of the trouble is better understood and can be obviated in various ways, so that it is comparatively easy to grow many of the very large sorts.

Some new large varieties have been produced which are less liable to mildew than the older ones, though most of them will do so more or less in unfavorable seasons, unless great care is exercised. In the first place, the bushes should have plenty of room as a crowded condition is one of the causes of the trouble. They should If you sing in bed you will cry next | not be planted in a place where the wind cannot blow freely among them, but in an airy situation where there will be less tendency to dampness. The dampness alone is not so bad, as the effect of the hot sun on the bushes after a prolonged wet spell.

Judicious pruning has much to do with the prevention of mildew, as where the old wood is removed and the extra branches taken out the air has a better chance for circulation and

To sum up the matter, the best way to obviate the difficulty is to plant the bushes where there is a good circulation of air, in partial shade during the heat of the day, and keep the bushes well thinned of branches. If the fruit ent of all other nations. Independence is so heavy as to bear the branches down to the ground, a frame should be

provided to hold them up. When mildew appears in spite of all precaution, a spray can be applied that will effectually check it, as mildew yields more readily to the fungicide than almost any other fungus. To make it dissolve one-half ounce of liver of sulphur in one gallon of water, and spray the bushes thoroughly, be--that it has always kept its old ginning when the disease first begins and repeating if necessary. In damp seasons the work will be needed more

> Bordeaux mixture has also proved a valuable help in this work, four applications being necessary during the season, two before blooming and two after. If currant worms are also working, add a little paris green or

It will not be found a hard task to than they can out of a \$3 opera ticket fight mildew, as it does not appear every season, often being years between. In our experience of many years we have had it but once, and think our freedom from it due to the care in planting and pruning.

Pear Culture Expensive.

The culture of pears has proved itself so far an expensive enterprise. Many a man, who has tried to grow If you cannot see heaven here you pears, has given it up with the declaration that all the pears he ever sucseeded in growing cost him more than oranges. This has been due to a single obstacle-the susceptibility of the pear tree to blight. More often than not the pear orchard falls before the scourge. Any man that can develop a blight-proof pear tree that bears ness. This was the 20th of June. To the hypocrite one man's religion | fruit of good quality will make his fortune.

The Strawberry Bed After Fruiting. The strawberry bed should receive attention as soon as the harvest is ended. Where large beds of strawberries are grown, the mower can be used in clipping off the old vines, and as weeds will have grown up quite thickly in the rows and between the rows where a mulch has not been used, the second work is to cultivate between the rows to destroy the weeds. If the rows are narrowed up considerably and the growth of vines and rough? Then keep on hand a Blessed is the sorrow that cures of is luxuriant, the problem of keeping piece of beeswax tied in a cloth and

Sorrel as a Pest.

liming the land helps greatly. The everywhere. The fields are red with lime. In the part that had been limed there was little sorrel, while on the other part it grew in abundance. It was evident that it found lime not tc its liking.

The popular impression is that sorrel indicates sour land, and this belief doubtless has in it some truth: though sorrel will grow on land that is sweet. It is like some other plants, it has its preference, and in this case it is for land that is too acid for the growing of some other plants. The very fact that other plants do not do well on it helps the sorrel, for it leaves the land free for its use. Sorrel can be best fought by liming the land, if it is inclined toward sourness and then putting it into a crop that needs cultivation. We have never seen the sorrel persist under such treatment. We solicit communications from our read

to quiet the trouble and restore her

medicina. "But my wife's second attack satisfled me that the use of coffee was at the bottom of our troubles, and so we stopped it forthwith and took on Postum Food Coffee. The old symptoms of disease disappeared and during the 9 years that we have been using Postum instead of coffee we have never had a recurrence of the vomiting. We never weary of Postum. to which we know we owe our good health. This is a simple statement of facts." Name given by Postum Company, Battle Creek, Mich.

Read the little book "The Road to Wellville," in each pkg.
