TASTY LIMA BEAN SALAD

Recipe for Making One That Will Be Found Exceptionally Good.

One tinned vegetable that yields a delicious salad for use while the fresh 4 green things are still scarce is lima Degns.

Use for this the contents of a half or a whole can, according to the number to be served. Simmer in boiling water until tender, then drain and chill thoroughly. Serve on lettuce leaves dressed with either mayonnaise or French dressing, according to taste, or French dressing made with thick cream instead of oil would be tasty. A sprinkling of parsley, chives and celery all finely minced and combined. or of any one of the three used singly. is considered an improvement by some salad endeaves.

in the way of a company dessert when the early strawberries first begin to be available, crush slightly enough of the berries to half fill a ring mold. Fill the mold up afterward with lemon jelly. The prepared jelly will serve for this. Just before it is to be eaten turn out upon a platter. and fill the hollow center of the ring with stiffy whipped cream. Pass with it lady fingers or angel food.

FOR PACKING AWAY CLOTHES

Physician Says Ounce Bottle of Chloroform is Better Than Camphor.

Better than camphor, according to a physician, in packing away clothes, is an ounce bottle of chloroform, with a split cork, so that the fumes may gradually evaporate Put the bottle in the bottom of the trunk. These fumes will not only kill moths, but many disease germs. Care must be taken not to inhale the fumes when opening the trunk.

All clothing should be put away as clean as possible. If there are pockets, turn inside out and brush thoroughly. Take solled ruching from the necks of dresses and shields from under the arms. A few bits of charcoal wrapped in tissue paper and laid among the clothing will prevent the follow and thus uppleasant odor that is often noticed when the air has been excluded for grounds" become some time.

ness activity requires playgrounds as well workshops. 25 says George Otis Smith, which is but an application to America of the old saw that all work and no play

manes of Jack a dull boy. When Secretary Seward was endeavoring to enlist the support of the people for his project to purchase Alaska one of the somewhat esthetic arguments by which he sought to gain advocates was that this great northwestern territory should be acquired if for nothing else than that it would afford a magnificent summer playground for the American nation. Alaska's purchase is doubtless justified on this score alone, and, while its varied topography affords in truth a wonderful field to the tourist, there are much more readily accessible "playgrounds" within the United States. Indeed, some lie at our very doors, although for lack of good transportation facilities they may be more difficult of

access than far distant points. The nation owes it to itself, to the people of the present day, and even more to those of a future congested population to create into national parks the magnificent regions of the Rocky

lead from valley to valley. Following the game came the Indians; the hunter and the trapper, looking for easy routes of travel, followed the Indians; then came the government engineers exploring and mapping, and finally the hardier of the tourists and lovers of nature. Most of these passes are closed for many months of each year by the snow; some of them are available only after the use of the ax to give footing on the hard ice of glaciers lying close to the Continental divide, but across one or two of them wagon roads may be built by which persons unfitted for the strenuous efforts now required to reach the higher country may have opportunity to view it at close range. None of the passes that are south of the Canadian boundary will ever be used for a railway route.

There is interest in Canada which looks with favor upon the creation of the proposed Glacier park, and at some future day the locomotive may cross from the Dominion to the waters of the Flathead river and wend southward to the towns and farming valleys adjacent to Columbia falls and Kalispell, forming a link between the

northern Montana. There are some people in the east who do not even know that there are gla-To one pint of raised bread dough ciers in the United States today, but think of them as extinct monsters belonging to a past geologic era. To such the very name, Glacier park, is an education. There are no longer, it is true, vast continental glaciers; even the great frozen regions of Alaska are small in extent compared with the ancient glaciers, but the remnants of the one-time universal ice sheets, such as can be seen in Glacier park, are so majestic and numerous as to awaken in the mind of the traveler sentiments of unbounded awe and wonder at Nature's matchless handiwork.

"Give a month at least to this precious reserve," says John Muir, some ten years ago, in speaking of the delights of this region. "The time will not be taken from the sum of your life. Instead of shortening it will indefinitely lengthen it and make you truly immortal."

Nor are the attractions of the Glacier park Beat the whites and yolks of four region confined to the scenic. Here lies, for instance, the majestic Lake McDonald, full of brisk trout, as described by Mr. Muir, in the heart of the splendid Flathead forests of giant pine. ter. To the yolks and sugar add one spruce and cedar, while ten miles above is Avacupful of graham cracker crumbs and lanche lake, shimmering at the foot of a group of one tenspoonful of baking powder. glarier-laden mountains. Far up the white peaks one can hardly fail to meet the white goat or nuts. Put the whites of the eggs in American chamois, while in other retreats dwell last. Bake to a brown and serve with deer, elk and bear, and many smaller, sleek-furred animals enjoying their beautiful lives in company with numerous bird species.

It is hoped that the present session of congress will preserve for the nation this latest playground and constitute it another of our national parks. It will then be our second largest park surpassed only by the Yellowstone.

The Sixtieth congress made a favorable report on a Glacier park bill, which had also the strong support of the secretaries of the interior and agriculture. This report was based largely vanilla and two drops of almond ex- upon a topographic survey made four years ago by a United States geological survey party, and upon a later compilation by Robert H. Chapman, one of the party, embracing a total area of about 1,000,000 acres lying just south of the Canadian line and between Flathead river and the Blackfeet Indian reservation. This area contains 60 or more true glaciers, ranging in size from small glaciers of a few acres each to those covering five square miles. It also contains over 250 glacial lakes from a few hundred feet to ten miles in area.

The Rocky mountain system in the United States abounds in regions of wild and magnificent scenery, but it is doubtful if any of them surpasses in grandeur and interest that of Glacier park. From its area water flows to Hudson bay. the Gulf of Mexico and the Pacific ocean. Mount Cleveland, its highest peak, reaches an elevation of 10,434 feet, and there are many other rugged mountains ranging from 6,000 to 10,000 feet above sea level. This area of the northern Rocky mountains, says Mr. Chapman, which lies to the north of the Great Northern railway and to the south of the Canadian boundary, is one of the most beautiful mountain regions in the world. Approaching the divide from the plains region to the east, the mountains present to the traveler a

ly formed by the great glaciers which once slowly flowed from the mighty snow-covered peaks and ridges forming the divide between the drainage of the Atlantic and the Pacific

oceans-the northern continental divide.

Deep in the canyons are roaring streams, coming from the melting ice and snow and flowing into placid mountain lakes below. Between the canyons the long finger-like ridges rise to considerable heights, the timber-covered slopes ascending steeply until a region of brush-grown broken rock is reached, which in turn leads to the base of precipitous cliffs. The canyons at the head usually terminate in great amphitheaters, rising cliff over cliff in a stairway of tremendous proportions. Many of the steps of these giant's stairways retain ice masses which slowly flow across them, each fed from a large ice mass above until a region of huge snow banks is reached.

The main Rocky mountain mass is actually made up of two principal parallel ridges, the Lewis and the Livingston ranges, which run approximately through the center of the proposed park. These ranges are the remnants of what was once a much wider plateau-like region of rock, which, however, has been mightily carved and shattered by the forces of erosion, principally those of the great ancient glaciers. Resting upon this great mass are the higher peaks, huge pyramids and blocks, with cliffs and precipices of hundreds and sometimes thousands of feet, plunging away down to the roaring streams of the canyons or ending in the great crevasse at the head of some glacier.

To the westward the mountains break precipitously, and from the foot of the steep, long. timber-covered ridges reach out toward the valley of the Flathead river. Between these ridges and extending up the canyons of the higher range are many miles of lakes, joined by rushing streams similar to those on the eastern side.

The whole park is inhabited by wild animals and birds and the streams abound in many kinds of fish. In the higher barren rock areas the white goat is found in great numbers, while on the slightly lower ridges, where some protection is afforded by stunted timber growth and brush and jagged slopes, the Rocky mountain sheep, or "bighorn," has his haunts. In the valleys and on the lower spurs are many white-tail and black-tail deer and moose; in places a few elk are found, and over the whole area, from high glacier and snow-field to huckleberry bush region of valley and flat, roams the giant grizzly bear.

All the game animals use the higher mountain districts for summer range only, as the area is too high and the snowfall too heavy to permit of winter use. As in the case of the other national parks, these game animals, protected by law from interference, will increase to such an extent as to furnish in the overflow from the park a tempting supply to sportsmen for all time; on the other hand, without such protection of a breeding ground, many of the animals, especially the big-

> Canadian Pacific and the Great Northern railroads. A route on the west side of the Flathead river. says Mr. Chapman, is very available for the location of a railroad track.

> In order to open up this region of superb and unique scenery for the public, a few main roadways will be required along the streams, together with horse trails to points of especial interest. Lake McDonald, it is pointed out in the senate report, lying near the southwestern boundary of the proposed park, is a sheet of water of unmatched beauty, surrounded by scenery of such signal grandeur as to make a roadway along its eastern shore extremely desirable, but this it is stated, is a matter for the future consideration of CONGTESS.

> The region combines all the elements of an ideal "playground" as it stands. It needs only official designation to insure its protection and perpetuity as such to stimulate the establishment of transportation facilities, making it more readily available to visitors. While of interest geologically, it is of little, if any, economic importance. The conditions are particularly adapted to the study of the structure and history of mountain building, as the ancient forces of nature were most active and a tremendous folding and warping of the once horizontally bedded rocks is in many places apparent. At one time prospectors for copper flocked to the region, but no finds were made indicative of any economic deposits, and the same may be said as to oil. From the reconnaissance made by the geological survey it is not believed that Glacier park contains any mineral-bearing formations of commercial importance. However, if such are discovered following the creation of the park there will be nothing to hinder their development.

KEEP YOUR FEET STRAIGHT.

How many men know how to walk? Most men turn their toes in or out, a writer in the New York Press says. The toes should not be turned either way. They ought to point straight ahead, so that the foot at the end of each step can give the body that upward, forward impetus that results in what is called a springy walk. This does not mean that a man should walk exclusively on his toes. The whole foot must be used in proper walking. The goose step of the German army is as absurd as the boy's prank of walking on his heels.

When a man walks in the right way-speaking literally-the back of the heel strikes the ground first. Then the rest of the heel comes down, after which the outer edge of the foot takes the bulk of the burden until the forward movement shifts the weight to the ball of the foot and finally to the toes. The ideal step is a slightly rocking motion. At no time should the entire foot be pressed against the ground. Heel to toe is the movement. Try it and see how much further and more easily you can walk. It's the Indian's way, and what Poor Lo doesn't know about footwork can go into the discard.

into a saucer, sponge the spots till they disappear, wipe, and put into the air to dry.
