

DIZZY, HEADACHY, SICK, "CASCARETS"

Gently cleanse your liver and sluggish bowels while you sleep.

Get a 10-cent box. Sick headache, biliousness, dizziness, coated tongue, foul taste and foul breath—always trace them to torpid liver; delayed, fermenting food in the bowels or sour, gassy stomach.

Poisonous matter clogged in the intestines, instead of being cast out of the system is re-absorbed into the blood. When this poison reaches the delicate brain tissue it causes congestion and that dull, throbbing, sickening headache.

Cascarets immediately cleanse the stomach, remove the sour, undigested food and foul gases, take the excess bile from the liver and carry out all the constipated waste matter and poisons in the bowels.

A Cascaret to-night will surely straighten you out by morning. They work while you sleep—a 10-cent box from your druggist means your head clear, stomach sweet and your liver and bowels regular for months. Adv.

The Curiosity of It. "There is one funny thing about wheat speculation."
"What is that?"
"It is a case where the dough is behind the wheat."

Red Cross Ball Blue, all blue, best bluing value in the whole world, makes the laundry smile. Adv.

Missouri holds fifth place in the United States in cement output.

Rah! Rah! Rah!

Three cheers for a keen appetite, perfect digestion, liver activity and bowel regularity. If you do not possess these, you should take

HOSTETTER'S STOMACH BITTERS

before meals. It helps Nature overcome all Stomach, Liver and Bowel ills.

CANADA'S OFFERING TO THE SETTLER

THE AMERICAN RUSH TO WESTERN CANADA IS INCREASING

Free Homesteads in the West. Thousands of Free Homesteads left, which will be made available in 5 years time. These lands are well adapted to grain raising and cattle raising.

EXCELLENT RAILWAY FACILITIES. In many cases the railways in Canada have been built in advance of settlement and for a short time there will not be a settler who need be aware of any of the difficulties of a new life.

Social Conditions. The American settler at home in Western Canada. He is not a stranger in a strange land, but he finds a million of his own people already settled there.

JUST ADDING THE SEASONING

Why Bennie Reasoned He Had Just Come in Time to Save the Baby Brother.

Five-year-old Bennie, who, since the arrival of his baby brother three days before, had been on tip-toe for a sight of him, was at last admitted to the chamber.

As he entered the dim room, he saw behind a screen the pink body lying on the lap of the white-capped nurse, who, having just given it a bath, was shaking powder over it from a perforated box.

At the sight a look of horror overcame the chubby face of Bennie. Toddling to his mother's bedside, he whispered in awed tones:

"Det up, nuver, quick! Nurse is goin' to eat little bruvver; she's puttin' 'the salt on him now!'"—New York Evening Post.

FALLING HAIR MEANS DANDRUFF IS ACTIVE

Save Your Hair! Get a 25 Cent Bottle of Danderine Right Now—Also Stops Itching Scalp.

Thin, brittle, colorless and scraggy hair is mute evidence of a neglected scalp, of dandruff—that awful scurf. There is nothing so destructive to the hair as dandruff. It robs the hair of its luster, its strength and its very life; eventually producing a feverishness and itching of the scalp, which if not remedied causes the hair roots to shrink, loosen and die—then the hair falls out fast. A little Danderine tonight—now—any time—will surely save your hair.

Get a 25 cent bottle of Knowlton's Danderine from any store, and after the first application your hair will take on that life, luster and luxuriance which is so beautiful. It will become wavy and fluffy and have the appearance of abundance; an incomparable gloss and softness, but what will please you most will be after just a few weeks' use, when you will actually see a lot of fine, downy hair—new hair—growing all over the scalp. Adv.

Next. This contribution is very faulty in spots, but we give it as it was postcarded to us. We are fond of the contributor:

"In a sweet Ohio village, whose chief industry is tillage, I sought a barber shop to get my hair cut. I didn't find the hair man, but a note tacked on the chair ran: 'Lam the stovepipe if you want me. Charley Faircut.' So I hit the pipe and waited till a girl came in. She stated: 'Say, paw he's busy now, but in the barneyard. He's a workin' like a fool, clippin' of Hank Ramsey's mule. You're the next one, but I'll bet that you'll get darn tired!' Back Danks."—Cleveland Plain Dealer.

ERADICATION OF INJURIOUS SHEEP TICK

Dipping Sheep on Western Ranch.

(By LEROY D. SWINGLE.) The sheep tick is one of the worst enemies that the sheep raiser has to meet. The damage that it does is accomplished slowly, silently and continuously. For this reason the damage may not be noticed or thought to be of much consequence. Nevertheless, in the course of a year, constant pestering its host by its blood-sucking habit, the sheep tick can effect a large amount of damage, which, however, is hard to estimate. If it should require but ten cents worth of grain more to raise and fatten a ticky lamb than one without ticks, the damage done in a flock of 10,000 is \$1,000. This is worth considering. The fact is that the damage is more than ten cents per sheep when the effect on the wool is added. Therefore, laying aside our moral duty to alay the suffering of the suffering brute, there is potent financial reason for destroying the tick. For determining intelligent methods of destroying the tick it was necessary to discover the details of its life history.

The life history is divided into four stages: the egg, the larva, the pupa, and the imago, or fully developed tick. This is the stage that is common to everyone. The egg is not laid as in the case with most flies. After fertilization it remains in the uterus of the mother and develops into a larva, which is laid in the wool of the sheep. This larva changes into the pupa stage in about 12 hours after it is laid. When first laid it is covered with a white chitinous membrane which soon becomes brown and hard. For convenience, I shall include in the pupa stage that portion of the larva pupa stage which is passed outside of the tick and shall speak of the tick as laying a pupa. Most people call the pupa an egg.

From the standpoint of the eradication of the tick the incubation period of the pupa, i. e., the time elapsing between the laying and the hatching, is the most important. None of the sheep dips will kill all the pupae, hence more than one dipping is necessary. The last dipping must occur after all of the pupae have hatched.

It was found that pupae would hatch in from 19 to 23 days in warm weather. In cold weather the incubation period might be much longer, sometimes 36 days being required. Thus the last dipping in summer must be at least 23 days after the first in order to kill all the ticks after they have hatched. In autumn or spring the last dipping should not occur sooner than 25 to 28 days after the first.

The question of next importance is how old must a tick be before it lays its first pupa? Experiments indicate that ticks may lay their first pupa within two weeks after hatching. This means that a young tick hatching soon after the first dipping may reach sexual maturity and lay its first pupa before the last of the other pupae on the sheep have hatched. Theoretically, it would be necessary, in order to prevent this, to make another dipping about two weeks after the first. Three dippings placed two weeks apart are certain to eradicate the tick, if the proper dip is used. There are, however, certain other factors that make it unnecessary to use three dippings, two being sufficient. These should be placed about 25 to 28 days apart in such weather as occurs in September.

It is difficult to determine which is the best dip to use, some being better in certain respects and poorer in others. The effect upon the wool and the cost must also be taken into consideration. The first essential is that the dip will kill the ticks and not injure the sheep. Among the coal tar dips there are several that may be mentioned as effective.

It should be remarked that sheep and lambs with short wool should be left in the dip longer than those with long wool, on account of their drying more quickly.

The best time to dip is probably in the autumn. The chief reason for advising dipping in the fall is that the wool on the lambs and sheep will be grown out so as to retain more dip. This makes the killing of the ticks more certain. If they are carefully dipped then the stock will be rid of the ticks and no dipping will be needed thereafter. The result will be that the next crop of lambs will be free from ticks from the first.

The sheep tick once eradicated will not return to the flock unless they associate with other ticky sheep. The sheep tick will not live but a few days, generally not over three or four, of the sheep. In this respect it differs from the true tick, which may be picked up by the host in the brush. The sheep tick's whole life is spent on the sheep. The pupae will, however, hatch even if they are kept off the sheep during the whole incubation period. It is therefore important to keep the sheep after dipping away from the shorn wool for at least a month. Young ticks will be hatching out in the shorn wool for three or four weeks after shearing.

It is hardly necessary to mention the fact that the attendants should not come in contact with the undipped sheep and then associate with the dipped flock.

GOOD DEMAND FOR HIGH-CLASS HORSES

Insistent Call for Draft Animals Cannot Be Supplied—Mare Is Profitable.

(By H. G. GARDNER.) There is an insistent market demand for high-class horses, especially for draft horses, that cannot be supplied. On the other hand, the country is flooded with common ordinary "plug" horses. They do not fill any particular requirement or demand, hence the very low and profit-killing prices for which they sell. This insistent demand for high-class draft horses does not come from the market alone. There also comes a demand from the farm, for this is a day of heavy machinery, demanding and increased amount of motive power. Experience has proven that the most satisfactory and economical form of motive power on the average farm is the heavy, sound draft mare. Besides doing most of the farm work she will raise a valuable colt each year, if properly handled. Thus she is constantly producing a profit other than by means of the work she does. The gelding or mule will not do this and in these days of high-priced lands, feeds, and labor this proposition is worthy of careful consideration.

Profit in Goats. Goats may be raised profitably on land which is unsuited for any kind of cultivation.

Salt for Cows. When cows are salted only once a week they eat too much at a time, and it causes looseness of the bowels. They will eat a little salt nearly every day if it is kept where they can get at it, especially when the grass is fresh and abundant.

Corn for Hogs. While ground shelled corn is somewhat more valuable for fattening hogs than is whole corn, it is not, as a rule, economical to grind corn for hogs.

LESS DOGS MEANS MANY MORE SHEEP

One Big Detriment to Animal Industry Is Large Increase in Worthless Curs.

I cannot concede, all things considered, says Secretary Coburn of Kansas in a recent address, that the Architect of the Universe made on this round world of ours an equal area better adapted than Kansas to profitable sheep industry. The one detriment is worthless dogs, and this is the way we rise to the opportunity with a kind Providence confronts us: In 1882 we had 806,000 sheep; in 1910 we had 175,000, a decrease of more than 78 per cent.; in 1882 we had 29,000 dogs; in 1910 we had 199,000, an increase of about 54 per cent.

These figures line with the experience of all the ages, which points out that no people whose land owners neglect animal husbandry, who sidestep the manure spreader, expectorate upon a sheep and defy the dog, can have any considerable well grounded, permanent prosperity.

Keep Stock Growing. Do not let the stock stop growing or producing milk during the fall, for lack of feed or from exposure. Any loss sustained will be regained at great expense of feed, or not at all. Keep the stock comfortable by supplying them with shelter from bad weather and see that they have plenty of eat.

EDISON DENIES HE'S A GENIUS

Tells Reviser of Latin Bible "I'm Only Mechanic and Couldn't Do Your Work."

Thomas A. Edison listened intently at his home at Llewellyn Park, in Orange, N. J., as the Abbott Francis Gasquet, president of the English Benedictine Monks, unfolded to him the gigantic task in which the commission appointed by Pope Pius X., of which he is the head, is engaged in revising the Latin Bible.

The inventor, accounted an agnostic, had asked the abbot to dinner to hear of the work he has undertaken. When the abbot had finished telling of the tremendous scope of the task, involving as it does the minute analysis of ancient manuscripts wherever they may be found in Europe, Mr. Edison turned to him, saying:

"Father Gasquet, I want to tell you that I wouldn't like your job. It's more than I could do."

"But you, Mr. Edison, are the genius of the age," protested Abbott Gasquet. "My work does not compare with yours."

"Oh," replied Mr. Edison, with a wave of the hand, "I am only a mechanic."

After dinner Abbott Gasquet, in the Edison library, heard operatic arias. "I'm feeling like a boy," said Mr. Edison, when asked if he had fully recovered from his recent illness. "I'll never take another vacation."

Once Upon a Time. Once upon a time there lived and flourished in a small city a worthy man. He was devoted to his native place; he loved its streets and stones, its strange odors, its smoke, its high rates, its indifferent water supply, its clubs and cafes and everything about it. Nothing could induce him to leave it even for the briefest period. In vain did the railway companies spread their holiday arrangements before his eyes; he returned with the more satisfaction to his favorite seat overlooking the central square. And, then, one day, the king of that country, who was full of capricious impulses, issued a decree that no one in this little city should ever leave it again, under pain of fearful penalties. And immediately our friend began to be consumed with a longing for travel.—Punch.

ECZEMA ON BACK AND CHEST. Pierson, N. Dakota—"The eczema started on my scalp. It finally went on to the back of my neck, then on to my back, arms and chest. It broke out in pimples first and then seemed to run together in some places, making a sore about the size of a dime. At times the itching and burning were so intense that it seemed unbearable. The more I scratched it the worse it became, and there would be a slight discharge from it, especially on my scalp, so as to make my hair matted and sticky close to the scalp. The hair was dry, lifeless and thin. My hair was falling so terribly that I had begun to despair of ever finding relief. My clothing irritated the eruption on my back. The affected parts were almost a solid scab.

"I had been bothered with eczema for about a year and a half. Then I began using the Cuticura Soap and Ointment. I used them daily for two months and I was cured." (Signed) Miss Mildred Dennis, Apr. 30, 1913.

Cuticura Soap and Ointment sold throughout the world. Sample of each free, with 32-p. Skin Book. Address postcard "Cuticura, Dept. L, Boston."—Adv.

Shipping Fever

Influenza, pink eye, epistaxis, distemper, and all nose and throat diseases cured, and all others, no matter how "resisted," kept from having any of these diseases with SPOHN'S LIQUID DISTEMPER CURE.
