

HOW TO GET A NEW DRESS

One Method That is Practised is to Jostle the Hotel Waiter's Elbow.

Hotel men in this town have joined forces to discourage the woman who deliberately jostles the waiter so that he spills food on her dress, and then claims damages therefor.

It used to be related of impetuous young army officers in London that when they hadn't the price of a meal they went to a swagger restaurant and toward the close of an elaborate dinner slipped a cockroach into the ice cream.

If New York men descend to such tricks we rarely hear of it. But we grieve to note the subterfuge of a New York woman when she needs a new dress.

World's Deepest Mud. The roads of the plains of Argentina have deeper mud in summer and deeper mud in winter than those of any other part of the world; consequently the wagons used on them have wheels from six to fifteen feet in diameter.

One touch of nature may make the whole world kin—but, just the same, your next door neighbor may not stand for a touch.

AN EASY MATTER

to correct such ills as Poor Appetite, Sick Headache, Bloating, Heartburn, Indigestion or Nausea if you act promptly and at the first sign of trouble take

Hostetter's Stomach Bitters

It invigorates the digestive system, renews and rebuilds health.

CORN CAN BE GROWN ON CANADIAN PRAIRIES

Manitoba is now commencing to produce considerable corn, chiefly for feeding purposes. In some cases, where the crop can be matured into the dough stage, silos could be used and would be a profitable investment.

Considering the success with which corn can be produced, and the advantages to be gained by so producing it, should not it receive the serious attention of the western agriculturist?

Corn is successfully grown in the northern part of Minnesota in similar soil and under the same climatic condition, and there does not appear to be any reason why like results should not be secured in western Canada.

It is the opinion of many American farmers of experience that the corn belt is extending northward. The prairie provinces must gradually take up with mixed farming. More stock on the farms must be raised, and in consequence farming must to some extent be diverted from grain growing to other necessary crops.

If crops suitable for wintering cattle and especially dairy stock are to be grown, why should not corn be one of these crops? In Ontario and in the United States we find it forms the main bulky food for wintering beef and dairy cattle.

It would not be without this profitable plant. In fact, since its introduction almost twice as much stock can be retained on the same amount of land, besides considering its great value for keeping the land clean. Some may say that many crops that can be grown in Ontario and the States cannot be grown here, but not so with corn, even now we find scattered fields of corn in Alberta and Saskatchewan.—Advertisement.

Worth Knowing.

The weight of the Greenland or right whale is 100 tons, or 220,000 pounds, equal to that of 88 elephants or 440 bears. The whalebone in such a whale may be taken at 3,360 pounds, and the oil at from 140 to 170 barrels. The remains of the fossil whale which have been found on the coast of Ystad, in the Baltic, and even far inland in Wagonpass, Westergothland, betoken a whale which, although not more than 50 or 60 feet in length, must at least have had a body 27 times larger and heavier than that of the common or right whale.

Important to Mothers

Examine carefully every bottle of CASTORIA, a safe and sure remedy for infants and children, and see that it bears the Signature of Dr. J. C. Fletcherson in Use For Over 30 Years. Children Cry for Fletcher's Castoria

Nothing Doing. "So you demanded an apology. Well, and what happened?" "The supply wasn't equal to the demand."

Or Any Other Kind. "I shouldn't think that prisoner could be particularly successful in uttering forged notes." "Why not?" "He stutters so."

The Vital Question. Hye—Are you really in love? Slye—Dunno. Haven't received Bradstreet's report yet.

Dr. Pierce's Pellets, small, sugar-coated, easy to take as candy, regulate and invigorate stomach, liver and bowels. Do not grip.

Some people can't stand prosperity. Fortunately, they don't have to try very long.

PORTABLE FARROWING HOUSE IN FAVOR

Berkshire Sow With Litter.

In order to give the pigs the right kind of a start in life, they must be born under good conditions. If the brood sows can have their way they will slip off to the woods when ready to farrow, pile up a lot of leaves at the side of a stump or in a fence corner and here the pigs will be born in the open air.

This procedure is all right in warm weather, but in the spring when cold, wet weather prevails much of the time, a large loss is sustained when the pigs come amid such surroundings, writes W. F. Purdue in Successful Farming. Hogs are so poorly protected by nature against the cold that warm, dry quarters are a necessity for the sows that farrow early in the season, or so many of the pigs will be lost that most of the profit is gone in the beginning. The loss of young pigs every spring is enormous, though it is largely preventable. All farmers who are waiting until they are able to build a fine, big hog house, with all modern conveniences, are making a mistake. These men should do the best they can at once and provide such shelter as will be dry, warm and well lighted.

The portable type of farrowing house has rapidly come into favor lately, even with those who are well able to provide more expensive quarters. The A-shaped building is a very serviceable type of the portable house that commends itself to many farmers who are engaged in the hog business on a large scale. It is warm at all seasons and it may easily be kept in a sanitary condition. Two men can move it to a new location in a few minutes and thus it does not become infested with rats or hog house smells. The slopping and feeding are always done outside, hence the floor never becomes wet and filthy. These houses are just the thing for nervous sows, as they can be located so as to be out of the hearing of other sows and pigs.

NOT PROFITABLE TO KEEP OLD HENS

Yearling Fowls Considered Superior to the Pullets for Breeding Purposes.

For the man who rents, the portable house is very advantageous, since it can be readily moved. He can well afford to construct portable houses at his own expense, if his landlord will not provide them, since he can retain them as personal property when he moves. These houses need not cost much. One can be made out of good materials for from four to five dollars. Any farmer who can handle a hammer and saw with any degree of skill at all, can construct these buildings during spare time and thus save the large wages demanded by carpenters.

Houses 6 by 6 feet at the base are large enough for young sows, while they should be made 6 by 8 feet for the large sows. Floors are not essential if the houses are located on a high, dry site that provides perfect drainage. In cold weather a swinging door should be provided; a piece of heavy canvas may be used for this purpose. There is an opening for ventilation at the back of the house.

The sows should be placed in their individual quarters at least a week before due to farrow, in order that they may become accustomed to their new surroundings. Quietness and but little feed are needed by the sow for the first 24 hours after farrowing; water with the chill removed and a little middlings stirred in it is all that she needs in any case. It is not desirable to start the milk of the sow too rapidly, as it might be more than the little pigs would need, and if it is not all drawn out of the udder it is liable to congest and cause trouble, not only to the sow but to the pigs. It requires caution, therefore, in the start not to push the sow with feed that will start the milk too rapidly. If the litter is a small one, more time should be taken in getting the sow on a full feed than otherwise. But the demands of the pigs will increase every day and it will not be long until they will be able to take about all the milk their mother will furnish from the best quality of feed. Care must be taken not to overfeed.

A practical method of feeding a sow with young pigs is to allow her at regular times, night and morning, just what she will eat perfectly clean and still want a little more. This method of feeding will retain the sow's appetite and keep her in a good healthy condition. The sow does not demand a fattening feed, such as an all corn ration, but she requires a milk-producing protein ration. The farmer who produces a large quantity of separator skim milk daily, has one of the best feeds for sows with young pigs to be found, when the milk is combined with ground grains and mixed into a thick sloup. Access to a growing pasture will help greatly to keep the sow's bowels regular as well

as adding to her appetite and assisting in the furnishing of milk for the pigs.

Clean kitchen slops are all right for the sows, too, but care must be taken that no spoiled fruits or vegetables are put into the slop, for these are pretty sure to result in diarrhoea or scours in the pigs, and there may be some loss before corrective remedies can be administered. One of the best of these, after the error in diet has been corrected, is to give the sow in her slop twelve to fifteen grains of copperas night and morning; if necessary, slightly increase the size of the doses until effective.

Provide dry bedding for the pigs, and in good weather they should follow the sow around in order to get the exercise which they need. In bad weather the pigs will probably remain in their beds, drawing plenty of milk, and they will then become too fat, which condition is likely to be followed by the thumps. Thumps is a condition brought on by a fatty growth about the heart and lungs, and it is fatal in a large percentage of cases. Even though it does not prove fatal, it always results in a decided setback for the afflicted pigs at the time and for a considerable while afterwards. It must be guarded against, first, by not overfeeding the sow, and second, by forcing the pigs to take exercise if they will not take it of their own volition. As long as the weather remains bad, thus keeping the pigs in their quarters, they should be stirred up and forced to scurry around for 15 to 20 minutes every day.

Nature Never Intended

Woman to be Sickly

As a matter of fact it is her duty to enjoy perfect health and strength—to be just as strong and healthy as man—perhaps more so—in view of the fact that it is she who brings up the world's offspring. Every woman can be strong and healthy. Don't resign yourself to a delicate life. If you suffer from headaches, backaches, nervousness, low spirits, lack of ambition, or have lost all hope of being well again—it's more than an even chance that you will speedily regain your health if you will try

Dr. Pierce's Favorite Prescription

(In Tablet or Liquid Form)

This famous remedy is the result of years of patient research by a physician who has made women's peculiar ailments a life study.

Since its introduction—more than forty years ago—thousands of women in every part of the globe have testified to its wonderful merits. You, too, need not be a weakling. Try it now. Your dealer in medicines will supply you or you can send to one-cent stamps for a trial box. Address Dr. J. C. Pierce, M. D., Buffalo, N. Y.

Dr. Pierce's Pleasant Pellets regulate stomach, liver, bowels.

Uric Acid is Slow Poison

Unseen in its approach, hard to detect in its early stages, and cruelly painful in its later forms, uric acid poisoning is a disease too often fatal. Bright's disease is one of the final stages of uric acid poisoning. It kills in our country every year more men and women than any other ailment except two—consumption and pneumonia. Bright's disease and uric acid poisoning usually start in some kidney weakness that would not be hard to cure, if discovered early, so it is well to know the early signs of kidney disease and uric poisoning.

When uric acid is formed too fast and the kidneys are weakened by a cold, or fever, or overwork, or by indulgences, the acid collects, the blood gets impure and heavy, there is headache, dizziness, heart palpitation, and a dull, heavy-headed, drowsy feeling with disturbances of the urine.

Real torture begins when the uric acid forms into gravel or stone in the kidney, or crystallizes into jagged bits in the muscles, joints or on the nerve tubings. Then follow the awful pains of neuralgia, rheumatism, gout, sciatica, neuritis, lumbago or kidney colic.

"I don't know what ails me."

It is but a further step to dropsy or Bright's disease. Be warned by backache, by sediment in the kidney secretions, by painful, scant or too frequent passages. Cure the weakened kidneys. Use Doan's Kidney Pills—a medicine made just for weak kidneys, that has been proved good in years of use, in thousands of cases—the remedy that is recommended by grateful users from coast to coast.

SCREAMED ALOUD

In Agony With Awful Kidney Ailments

Mrs. Clara Branch, 206 N. 16th St., Lexington, Mo., says: "My whole system was filled with uric acid poison. I had terrible sharp, shooting pains in my head and sometimes I was so dizzy, I staggered and nearly fell. The poison affected my whole body and my hands, arms, limbs and ankles were swollen and sore. The pains got so bad I screamed and at times I would die. I was nervous and languid and at times I had blinding spells. Remedies and physicians prescribed did me no good. I would die a few days, the soreness and pain began to ease up and I felt a little stronger. In almost no time I was up and around, in good health. Doan's Kidney Pills purified my whole system. I have no more of that which saved my life. Since I was cured, I have had no further trouble."

DOAN'S KIDNEY PILLS. "When Your Back is Lame—Remember the Name" Sold by all Dealers. Price 50 cents. Foster-Milburn Co., Buffalo, N. Y., Proprietors

HIS MIND ON HIGHER THINGS

Scholar Unable to Sit Down and Reason Quietly on Matters of Everyday Life.

A monument was recently unveiled to the memory of Henri Poincaré, the famous mathematician and physicist, who was a cousin of the president of France. The occasion recalls a story or two of his remarkable absent-mindedness.

Almost every day Poincaré left his money lying about somewhere. Finally his mother sewed his purse into the pocket of his coat. But one day, when he had dressed in a hotel, he put on his overcoat without the coat, and left that lying on a chair. Needless to say, he never saw the purse again.

One evening he was looking in a closed bookcase for a manuscript. During the search he set the lamp on a shelf in the case, and in a moment of abstraction closed the door of the cabinet, and sat down in darkness. After he had pondered for a time on the disappearance of the light, he came to the conclusion that he had suddenly become blind. That seemed to him quite possible, since his eyes were weak, anyway, and he groaned at the thought of his deplorable condition. Suddenly, to his surprise, a stream of light appeared, coming from the adjoining room, and he remarked, with much satisfaction: "My sight seems to have come back again." Not even then did he think of the lamp in the bookcase!—Youth's Companion.

A Century Ago.

One hundred years ago saw the end of the Chatillon congress which had been endeavoring to settle upon terms of peace between France and the nations allied against her. From the beginning of the negotiations little hope had been entertained on either side that an agreement would be reached. Napoleon consented to give up Westphalia, Holland and Spain, to restore the pope of Rome and Ferdinand VII to Madrid. He agreed to give up Malta to England, as well as most of her colonial conquests. But he remained steadfast in claiming for France her natural limits, the Rhine and the Alps. The plenipotentiaries, deciding that further discussion would be useless, declared the negotiations at an end, and the allied armies prepared to resume their march on Paris.

Wide Assortment.

She thought she would try the new telephone. "What number?" asked central. "Why, I don't know. What numbers have you?"—Courier-Journal.

CLEVER WIFE

Knew How to Keep Peace in Family.

It is quite significant, the number of persons who get well of alarming heart trouble when they let up on coffee and use Postum as the beverage at meals.

There is nothing surprising about it, however, because the harmful alkaloid—caffeine—in coffee is not present in Postum, which is made of clean, hard wheat.

"Two years ago I was having so much trouble with my heart," writes a lady in Washington, "that at times I felt quite alarmed. My husband took me to a specialist to have my heart examined.

"The doctor said he could find no organic trouble but said my heart was troubled from something I had been accustomed to, and asked me to try and remember what disagreed with me.

"I remembered that coffee always soured on my stomach and caused me trouble from something I had been accustomed to, and asked me to try and remember what disagreed with me.

"I remembered that coffee always soured on my stomach and caused me trouble from something I had been accustomed to, and asked me to try and remember what disagreed with me.

"A neighbor of ours, an old man, was so irritable from drinking coffee that his wife wanted him to drink Postum. This made him very angry, but his wife secured some Postum and made it carefully according to directions.

"He drank the Postum and did not know the difference, and is still using it to his lasting benefit. He tells his wife that the 'coffee' is better than it used to be, so she smiles with him and keeps peace in the family by serving Postum instead of coffee."

Name given by the Postum Co., Battle Creek, Mich.

Postum now comes in two forms: Regular Postum must be well boiled. 15c and 25c packages.

Instant Postum—is a soluble powder. A teaspoonful dissolves quickly in a cup of hot water and, with cream and sugar, makes a delicious beverage instantly. 30c and 50c tins.

The cost per cup of both kinds is about the same.

"There's a Reason" for Postum. Sold by Grocers.

Gifted Princess Sophia.

Princess Sophia, wife of the ruler of the new state of Albania, is said to be a highly gifted woman. She is the mother of two children and quite a musician. She plays the harp, mandolin and guitar, singing to her own accompaniments. She writes poems and paints and has collected about her in Potsdam a charming circle of artists. She grew up in the country, in Roumania, and can ride any kind of a horse. Her husband, Prince William of Wied, is a great student, an athlete, and also is said to be a man of great intellectual force.

DRY SCALE COVERED HEAD

2760 Tamm Ave., St. Louis, Mo.—"My little daughter's head began with a dry harsh scale covering it. First it got a white scale over the top and then it got a dirty brown scab with pus under it. Her hair came out in less than a week and her head itched and bled. She had no rest. I had her wear a scarf all the time, it looked so badly. She was so sore and had such big brown scabs on her head that the teacher would not let her attend school.

"We took and had her treated for three months with no relief. She kept getting worse until I tried Cuticura Soap and Ointment. I used the Cuticura Soap every third day and the Cuticura Ointment at night. In three weeks her head was well of sores. Two cakes of Cuticura Soap and one box of Cuticura Ointment completely cured her." (Signed) Mrs. Walter Rogers, Nov. 28, 1912.

Too Late.

She—What's your opinion of marriage? He—Sorry, but I have a wife already.

Care of Young Chicks.

This is the time of the year when the care of young chicks is uppermost in the poultryman's mind. Whether they are mothered by a hen or hatched in an incubator they require much attention, and it is effort well spent.

Destroying Slugs and Snails.

One of the best means of destroying snails and slugs in the garden is to dust the plants with lime. Salt strewn along the edges of beds will also keep them from the plants.

Transplanting Evergreens.

With proper care and suitable apparatus, evergreen trees of 25 years' growth can be transplanted successfully, but unless one is thoroughly acquainted with this kind of work, it will prove more satisfactory and less expensive to plant smaller trees.

Hatching Pullet.

If you can hatch all the pullets needed within two or three weeks you will find less work and more pleasure and profit in caring for them.
