WESTERN GANADA AND

It is Essentially an Agricultural Country.

Western Canada is the Mecca of the land-hungry man who wishes to earn a good living from the soil and save up

duction of more than 30 bushels to the acre as compared with an average of 17 bushels to the acre in the States.

Wheat raising can hardly be made profitable on land that costs from \$50 an acre up unless such land will produce a much higher than a 17 bushel average, or unless the price of the cereal reaches an excessive figure.

The initial investment of \$50 an acreis more than the average man can afford to make if he expects to raise wheat and to make a success of it.

A good homestead of 160 acres can ada and additional land admirably suited to the raising of wheat can be it can be made extremely profitable.

No other part of the world offers such tremendous opportunities at the present time to the ambitious young farmer as the three great provinces of Western Canada.

It is worth the while of the landhungry man to cease his depressing search for local cheap land or for land that is not entirely worked out by taught to swim, however, they soon long cropping and to look outside his own district. Western Canada is a country that should receive the consideration of all such men. The Western Provinces of Manitoba, Saskatche- Commander islands, belonging to Ruswan and Alberta are essentially agricultural territory.

180 million acres of first-class agricul- The Pribilof islands are government tural land actually available for de- property, and thus it happens that the velopment-a block three and a half United States government finds itself times as large as the total land area of the owner of by far the most valuable Minnesota, and equal to the combined herd of fur seals in the world. land areas of Minnesota, Iowa, Wisconsin, Illinois and Indiana.

But whereas the population of the five states mentioned is fifteen million people, the population of Western Canada is only about one and threequarter millions. It has been said that, the average

States last year was 17 bushels. This average does not, of course, represent the efficiency which may have been them. reached by individual farmers or by individual states. However, place against this figure the fact that the 1915 Western Canadian average-the average from nearly twelve million acres-was over 30 bushels. In the case of the Province of Alberta, the average reached 32.84 bushels per acre. There are already a large number of American farmers in Western Canada. so that the newcomer could neveroverlooking the fact that the same language is spoken-feel himself in an alien country. There seems, in fact, a tendency to establish little colonies posed of those coming from the same sections. The characteristics of the country, and the climate and season, are very much the same as in Minnesota or North Dakota. Social conditions bear a family resemblance. Education is free, and is good; its cost being defrayed partly by taxation, partly by grants from the Canadian Government, from the sales of school lands, of which, when the country was first surveyed, two sections in every township were allocated. Taxation in every rural district, in many towns and cities, is based practically on land values alone, improvements of all kinds

A New Use For This Word

The New Post Toasties are truly entitled to the word "delicious."

They're distinguished by the tiny bubbles found on each flake and they carry the full, rich flavour of choice, white Indian corn - not found in corn flakes

And unlike common corn flakes, they are not "chaffy" in the package and don't grow mushy in milk or cream.

Note carefully the tiny bubbles—then try a handful dry to test the flavour. In comparison, other com flakes are as "chaff."

New Post Toasties

Sold by Grocers everywhere.
