Brownville, June 24, '69. n-49-

### AMERICAN HOUSE.

**New Hotel**  
IN  
BROWNVILLE, NEBRASKA.  
**P. J. HENDGEN.**

Merely to inform the public that he has purchased the  
American House in Brownville, N. T., formerly kept by  
T. J. Edwards, and has remodelled, renovated and en-  
tirely changed the whole from cellar to garret,  
with an especial view to neatness, comfort and conven-  
ience. Having had many years experience as a hotel  
keeper he can make in guaranteeing the patronage  
of Brownville, and the traveling public, that while  
at the American, they will have no reason to complain  
of anything in any respect.  
The Hotel is situated immediately at the Steamboat  
landing, and commands a fine view of the river, and  
peculiar advantages to the traveling community.  
The proprietor asks but to be tried, and if not found worthy,  
discontinue.  
January, 19, 1860. 25-4

### A. L. COATE

**NEMAHA LAND AGENT,  
SURVEYOR & NOTARY PUBLIC.**  
Will locate lands, investigate titles, pay taxes, &c., &c.,  
either in Kansas or Nebraska; buy, sell, and enter  
land on commission; invest in town property; buy or  
sell the same, and will always have on hand parcels  
of townships, counties, &c., showing all lands sub-  
ject to entry, and where desired will furnish parties in-  
terested with the same.  
Being the oldest settler in the county will in all  
cases be able to give full and reliable information.  
Address A. L. Coate, either at Brownville or Nebraska  
City, Neb.—Nebraska Territory. 6m-42-2

**The Nebraska Farmer.**  
16 PAGES QUARTO MONTHLY.

**FURNAS & LYANNA,**  
Brownville, Nebraska.

### THE MELVIN MILLS.

**NEMAHA CITY, NEBRASKA.**  
The proprietor returns thanks for the generous  
patronage thus far extended him, and hopes by re-  
newed efforts to merit increased favors.

**Farmers and Others**  
Will do to have their grain in as soon as possi-  
ble, as spring freshets will soon be upon us, when  
more than likely it will be impossible to run the  
mill for several weeks.  
**Come Along Now!**  
Meal and Flour of Superior Quality  
Constantly on Hand.  
We will pay 75 cents cash for wheat.  
Feb. 27, 1860. J. G. MELVIN.

**Peru Chair Factory,**  
AND  
**Cabinet Shop.**  
The undersigned, having purchased the Chair and  
Cabinet shop lately owned by T. H. Marshall, take his  
method of informing the public that they are now pre-  
pared to fill orders for all kinds of furniture, such as  
Chairs, tables, stands, bedsteads, bureaus, safes, cribs,  
cradles, lounges, &c., either at wholesale or re-  
tail, as cheap as can be bought at any other establish-  
ment in the west. The best of cedar, lumber and trim-  
mings constantly on hand, which will enable us to fill  
orders for desks at short notice.  
We have attached to our shop a good Horse Power and  
Turning Lathe, and we are prepared to do any descrip-  
tion of turning from a Chair-leg up to a Sugar Mill.  
Chairs and Furniture of all kinds repaired in the best  
style.  
S. B. CURT, Wheat, Flour, Dry Goods, Groceries, Lumber  
and produce of all kinds. Money not accepted, ten  
in exchange for wheat or stock. We hope by strict  
attention to business to merit a share of public patron-  
age.  
BENEDICT & BLISS,  
Peru, Nebraska, November 24, 1858.

### AGRICULTURAL.

From the American Agriculturist.  
**Utility of the Barometer.**

"John Underwood, Esq., of Aurelia,  
New York, secured his entire hay crop  
this Summer, by consulting the barom-  
eter. The morning on which he com-  
menced cutting his hay, looked cloudy and  
felt like rain, still the barometer pointed un-  
erringly to dry weather, and upon the  
strength of that he sent in his mowing  
machine. The hay was cut and cured,  
and secured, before any rain made its  
appearance. Who doubts that the in-  
surance paid for itself by that item of  
information? The time is coming when  
the farmer will as soon think of return-  
ing to his sythe, as to be without the  
infallible weather prophet; the barom-  
eter.—*Suburban Advertiser.*

Since we have commenced making ob-  
servations upon the aneroid barometer,  
we have been impressed more strongly  
than ever before, with the great utility  
and importance of this instrument to farm-  
ers. During the dry weather, pre-  
valent here all through June and July, the  
barometer index remained almost steady  
at a point above 30 inches, though  
every slight shower that fell, was indicat-  
ed by a rapid declension of the index  
hand, from two to ten hours in advance.  
The other day we remained at home  
writing until after dinner, and then went  
down to our city office. The sky being  
clear, with no indication of rain, we went  
thinly clad from head to foot. On reach-  
ing the office, clouds had begun to gather,  
and the barometer had fallen nearly  
half an inch, which our associate informed  
us, had occurred within an hour. We  
obeyed its injunction, and started at once  
for home, and had scarcely arrived there  
before a heavy fall of rain commenced,  
accompanied with thunder and a strong  
wind. The barometer in that case cer-  
tainly saved us a disagreeable wetting  
and perhaps a cold. This is only one of  
several similar instances of the positive  
indications of rain, which have been given  
by our barometer during a few weeks  
past.

The contrary indications have been  
scarcely less marked. For several times  
there has been every sign of rain in the  
heavens, but the barometer was unmoved,  
and in no such case a rain fallen. Here  
is one example. We had planned to  
take our family to see the Great Eastern  
early on the morning of July 25. On  
rising in the morning, the sky indicated  
a rainy day, and we were in doubt whether  
to defer the visit or not. A glance  
at the barometer showed no change in  
the index for twenty-four hours, and we  
determined to follow its indication. The  
result was, we had a fine day, and an in-  
structive and pleasant visit to the "Big  
Ship." As it turned out, we could not  
have gone on any subsequent day of her  
stay, and but for our barometer, would  
have lost the opportunity of inspecting her.

We particularize the above instances  
to illustrate the practical utility of the  
barometer. The truth is, science is con-  
stantly contributing in a thousand ways  
not only to comfort and convenience, but  
is also aiding in more successfully per-  
forming the various operations of active  
life.

From the Boston Cultivator.  
**Bee Culture.**  
After the removal of the young swarm  
to the stand, the hive should be elevated  
upon the pins at the corners at once, and  
if the swarm is a large one, and the weather  
very warm at the time, the bees will  
be likely to lay outside of the hive, in  
which case it should be raised, by small  
blocks at the corners an inch or more.  
This will admit such a current of air that  
the bees will soon enter the hive, and if  
the season is a favorable one, will fill it  
with combs in fifteen days.

The boxes for storing surplus honey  
may be put on immediately after remov-  
ing to the stand, or may be left off until  
the bees are seen to cluster down to the  
bottom board, which they will not in any  
case enter them to work till the space below  
is occupied; and the objection that some  
persons raise against my method of fur-  
nishing extra store room upon the top of  
the hive, is without foundation, as in no  
case have I known a swarm of bees to  
commence storing honey in box or sup-  
per, until the main hive was filled with  
combs and honey to within two or three  
inches of the bottom.

No surplus honey need be expected  
from any but old stocks and first swarms,  
as all after swarms will have as much  
space as they can occupy the first season  
in the main section.

The necessity of having very strong  
swarms cannot be too deeply impressed  
upon the bee-keeper's mind. With this  
end in view, he should be governed by  
certain rules, varying them according to  
circumstances. The following is the course  
I would recommend in uniting the weak  
swarms. I have remarked that as a  
general rule, all third swarms should  
be returned to the parent hive; there  
may be an exception to this rule in cases  
of early swarming, when the third swarm  
issues by the 25th of June. Then they  
may be hived, uniting with a second or  
third swarm from another hive, issuing  
at about the same time, or at the longest  
within four or five days. If a longer time  
elapse, they would not be likely to unite  
harmoniously. When issuing thus early  
in the season, the old stock would not be  
likely to suffer from over-swarming, but  
would have ample time to recruit their  
numbers, and by September, if prosper-

ous, would be found very populous. In  
cases of late swarming, say the last of  
June, it is well to unite second swarms,  
if it is not desired to increase the number  
of stocks very fast. If the season is a  
good one, if they would be likely to make  
a few pounds of surplus honey; at any  
rate, they would fill the hive and form a  
strong stock, and probably be very pros-  
perous the year following. Third swarms  
issuing as early as the 16th of June and  
hived alone, will store about 15 pounds of  
honey in an average season, which is  
worth at least two dollars and fifty cents,  
and in the fall the bees may be driven  
out and united with some weak swarm,  
when the two together will winter much  
better, and, strange as it may appear,  
will consume but a small amount more  
honey during the winter, than each would  
if kept separately. It is much the best  
way to unite swarms at the season of  
swarming, and then they will be likely  
to fill the hives with honey and combs,  
and consequently swarm earlier the fol-  
lowing season; whereas, if not united  
till fall, some hives will be only half or  
two-thirds filled, and of course the sea-  
son will be pretty well ad- ced before  
they would fill the remainder and send  
off a swarm.

When swarms are united soon after  
issuing, no fighting will occur. All that  
is necessary to do then, is to hive the  
swarm that is to be united with another  
in any convenient box, and shake the bees  
down immediately in front of the other  
hive, when they will quickly enter, and  
all will go on peaceably. Uniting fami-  
lies in the fall is a very different thing,  
as each stock of bees has a peculiar scent,  
and in uniting them, until the two be-  
come blended, more or less fighting will  
occur.

The course then to be pursued, is to  
place one hive bottom upwards and cover  
with a piece of gauze or very thin cloth.  
The other hive should be set directly up-  
on this, and the bees in both prevented  
from escaping, but care should be taken  
to allow sufficient air for respiration.  
After remaining in this position a cou-  
ple of days, the doors of the two will be-  
come so blended that they may be united  
with perfect safety. To do this, the  
cloth that divides them should be with-  
drawn, and the lower hive rapped smartly  
with a rod, when, with the aid of smoke  
applied to the lower end of the hive, the  
bees will nearly all ascend to the upper  
one, and no fighting will take place. In  
all such operations with bees, one should  
be protected with a bee-dress or a veil,  
and thick woolen gloves, to protect his  
face and hands.

The present month is a good time to  
examine the hives and observe their con-  
dition. All new swarms, to winter well  
and be safe against all contingencies—  
that is, an early setting in of cold weather,  
and a cold, late Spring—should weigh  
at least 15 pounds exclusive of the hive;  
and old stocks considerably more, say  
from twenty to thirty pounds. Many old  
hives will weigh as much without a pound  
of honey, as a new one that has been  
occupied but one season, and contains  
from eight to ten pounds. All late swarms  
and old stocks, that from any cause has  
failed to lay up sufficient stores to do  
them through the winter, may be fed so  
as to winter just as well as any. Un-  
less it is desired to increase the number  
of stocks as fast as possible for a year  
or two, I would not advise to unite such  
weak swarms, but rather to unite them  
with some hive that contains a good  
amount of stores, as recommended above.  
The reason is, a late, weak swarm will  
send off late weak swarms the next  
season. As an early lamb or pig is worth  
more than a late one, so is an early  
swarm of bees more valuable than a late  
one, only there is a much greater dif-  
ference, as can readily be shown. A  
first swarm of mine that was hived the  
first day of June, stored forty pounds of  
surplus honey. A first swarm that issued  
July 2d, have only filled the hive, and the  
two swarms the latter was the  
larger. Therefore it should be an ob-  
ject with the apiarist to secure as many  
early swarms as possible.

### Fecundity of Rats.

Buffon, and others, state, that 1,000-  
000 rats may be propagated in two years  
from a single pair. If this be true, there  
is no occasion to wonder that dwell-  
ings, stores and offices are infested by  
these troublesome and destructive ver-  
min. If what such distinguished natu-  
ralists state to be true, then it becomes  
all whose premises are infested with these  
quadrupeds, to enter upon the work of  
slaying them as vigorously as possible,  
for you see, if let alone, how quickly  
they will fill every hiding-place adapted  
to their wants and necessities. It is with  
them as with most other vermin and  
weeds; if neglected, their patronage be-  
comes perfectly overwhelming. Hence the  
old maxim, "A stitch in time saves nine."

The people of Anderson County, Tex.,  
held a public meeting, last month to  
request Gov. Houston to call an extra  
session of the Legislature. They say  
that the crops in their own and many  
other counties of the State have failed,  
and the people will not only be sorely  
pressed to obtain the necessities of life,  
but be unable to meet their pecuniary  
obligations. They therefore desire that  
the Legislature should adopt measures  
for their relief.

### HON. S. G. DAILY,

Every purchaser of a dollar bottle of the ARCTIC  
LIMBENT, at Dr. Hays's expense, the UNITED  
STATES ARMY, of New York, for one year. The  
Journal is a large illustrated paper, each number con-  
taining sixteen pages, beautifully printed on clear white  
paper, and filled with original matter from the most  
reliable sources of the country. Certificate of subscription  
and full particulars of the novel and philanthropic ex-  
periment, of which this offer forms a part, will accompany  
each bottle.

**EXTRAORDINARY ANNOUNCEMENT.**  
Prices of the Limbent, 25 cents, 50 cents, and \$1 a bot-  
tle. A one-dollar bottle contains as much Limbent as  
eight twenty-five cent bottles.

Persons wishing to borrow money, can be accom-  
modated by applying to the undersigned. Real estate  
also city rented.  
H. M. AKINSON.

**Money To Loan.**  
Persons wishing to borrow money, can be accom-  
modated by applying to the undersigned. Real estate  
also city rented.  
H. M. AKINSON.

The arora borealis affected the tele-  
graph wires a few weeks ago to such a  
degree that messages were sent between  
Boston and New York independently of  
the galvanic battery. The wires run-  
ning eastward of Boston and westward  
of New York were not affected much.  
Eastward of St. John the wires were so  
much under the magnetic influence that  
it was impossible to work them.

The American Agriculturist tells the  
following "Whopper,"—not the story of  
course, but the squash-vine:<
