MOTT'S RESTORATIVE

AN asperient and Stomachic preparation of IRON Purified of Oxygen and Carbon by combustion in Hydro-sen. Sanctioned by the highest Medical Authorities, both in Europe and the United States, and prescribed in their practice. The experience of thousands daily proves that no

reparation of Iron can be compared with it. Impuriies of the blood, depression of vital energy, pale and therwise sickly complexion indicate its necessity in almost every conceivable case. Innoxious in all maladies in which it has been tried, has proved absolutely curative in each of the following

In Debility, Nervous Affections, Emaciation, Dyspepsia, Constipation. Scrofulus Tuberculosis, Salt Rheum, Mismenstruation, Whites, Chlorosis, Liver Complaints, Rheumatism, Chronic Headaches, Intermittent Fevers, Pimples on the Face, &c. In cases of GENERAL DEBILITY, whether the result

of acute disease, or of continued diminution of nervous and muscular energy from chronic complaints, one trial of this restorative has proved successful to an extent which no description nor written attestation would become forgotten in their own neighborhoods, have sudfrom protracted travel in a distant land. Some very signal instances of this kind are attested of female sufferers, emaciated victims of apparent marasmusanguineous exhaustion, critical changes, and that complication of nervous and dyspeptic aversion to air and exercise for which the physician has no name. In NERVOUS AFFECTIONS of all kinds, and for reasons familiar to medical men, the operation of this preparation of iron must necessarily be salutary, forunlike the old oxides, it is vigorously tonic, without being exciting and overheating; and gently, regularly aperient, even in the most obstinate cases of costiveness without ever being a gastric purgative, or inflicting a disagreeable sensation It is this latter property, among others, which makes t so remarkably effectual and perwanent a remedy for

The compacting the frame, thus securing a more erfect balance to the machine: the position of the raker, in the rear of the driver, thus placing the weight where it should be, and relieving the weak-er parts of the machine; the decreased weight and slight indentation of the sickle, the Castor wheel, and other improvements added, have materially lessened the direct draught, and so obviated the side dranght that many assure us that it does not now vxist. The draught of the Reaper is so light that in numerous instances the large four-horse machine is worked with but two horses.
