CHARGES REASONABLE.

JOHN A. SMALL.

in numerous instances the large four-horse machine is worked with but two horses.

As A Mower.

The machine of 1861 will be found fully equal to any test that it may be submitted to. The slight | free for each dozen ordered. indentation of the Sickle, its lightness and combination with the beam and fingers, allows an increase of motion not practscable in other machines, thus enabling us to do good work, with a a slow team, oxen, even, working well. Our

Improved Guard and Patent Cleaner. effectually prevents choking, no matter what the condition of the grass, while our new divider point separates hadly lodged and tangled clover or grass, where other machines fail.

There is also a great advantage in our serrated sickle edge over the smooth, as it does not require sharpening so often, thus saving time. Our Sickle will frequently run through an entire harvest withcut once grinding, while the smooth edge must be ground once each day, if not oftener. With a smoth

edge the draught increases as the knife become dull. Our draught is uniform, and in repeated trials duing the season of 1860, proved far lighter than single Mowers, cutting at the same time from twelve to eighteen inches wider.

Our Mower can be used with or without the reel this is important, and without the reel, weighs but 25,090 Standard Apple trees, of the most hardy and about 670 pounds.

In addition to the very liberal warrantee given to all perchasers, we would say' as heretofore, hat farmers who may desire it, are at liberty to work our machine through the harvest, with any ther, and keep, and pay for, the one preferred.

Pamphlets with full description of improvements estimonials, &c., can be had by application to
