Also field seeds at lowest market rates—Chinese Sugar Cane seed, Pikes' Peak, Top O'notion, &c., &c. Dealers in seeds would do well to send them their orders.

600,000 AGENTS, MALE OR FEMALE. LLOYD'S NEW STEEL PLATE COUNTY COLORED MAP OF THE UNITED STATES, CANADA, AND NEW BRUNSWICK. From recent surveys, completed Aug. 10, 1862; cost \$20,000 to engrave it and one year's time. Superior to any \$10 map ever made by Colton or Mitchell, and sells at the low price of fifty cents; 275,000 names are engraved on this map.

A Hint Worth Heeding. One great cause of the increasing circulation of good agricultural papers is that, the matter of which they are composed, is nearly all the every day experience of progressive farmers.

Wire Fences. In a late number of the Rural New Yorker, C. D. Bragdon argues that wire fences is the cheapest and best that can be built in many sections. He stated that he had just examined a fence which he helped to make eleven years ago, and found it in good condition, though no expense had been laid out on it since it was built, and it has been thoroughly tested by stock of all kinds.

The floor from the hay loft by mice or chickens. It got a start in the garden before plowing in spring, and troubled me much. So much for the time of sowing and the results. Now the different kinds of grasses adapted to culture in our State.

A Woman Who Never Gossips. Oh, no, I never gossip! I have enough to do to take care of my one business, with out talking about the affairs of others, Mrs. Smith.

Two Kinds of Fences. A good fence is very cheaply made by using about two boards securely nailed to cedar posts, with stones or even an embankment of earth underneath. It forms a good road fence, or as a division fence between lots, where sheep or horses run.

daily witness by noticing how often and easily one man, who does not take an agricultural paper, is gullied by agents, who are vending worthless farming utensils, patent cow-milkers, fruit trees with great names, &c., while his neighbor, who believes in book-farming, and reads the papers, is able, by his superior intelligence, to avoid all worthless articles, and choose those that are proven to be good.

Blue grass is of little use for hay, but is valuable to some extent, for pasture. It starts very early in the spring, and is excellent for winter pasture, especially when left without feeding or mowing in summer.

My plan has been to use my manure to a great extent on my meadows, by hauling out and spreading it in the fall—making it as fine as possible. The rain carries it down to the roots of the grass, where it is made available the coming spring—producing a vigorous growth, and insuring a good crop.

In speaking of the comparative value of the different kinds of grasses for pasture, I have noticed several facts. One is, that stock in summer will eat but little blue grass, unless it is fed close enough to prevent it from heading up. Another fact—stock pastured on timothy, if not overstocked, always get fat. I have a large pasture, a part of which has been in cultivation, another part in blue grass, another part in white clover and wild grasses.

How Bodies are Embalmed.—Embalming, which is coming much into practice of late, is thus performed:—The modern embalmer finds an artery into which he can place the nozzle of an injecting syringe. The artery in the upper part of the arm, called the brachial or the artery in the neck, the carotid, answers the purpose.

Explosive Coal Oil.—It has lately been discovered that a certain quality of Coal Oil is as explosive as Camphene, and consequently more dangerous, as (many through ignorance of its properties are careless in their use of it. To detect whether it is explosive or not, pour a small quantity in a saucer and bring a lighted match down to it slowly. If explosive, it will flash up like powder; if not, it will not burn at all. In any way accidents may be avoided. The oil made from light coal is almost worthless.

Venomous Caterpillars. A most singular case (perhaps the only one on record) of death caused by caterpillars occurred a few days ago in the commune of Dardilly, near Lyons. A little boy not more than eight years old had gone into a neighboring wood in quest of bird's nests. Perceiving one on the top of a tree he climbed up, but in so doing shook down an immense number of caterpillars many of which fell on his shirt, his only upper garment, and soon covered his breast, which was bare, and penetrated to his armpits and shoulders.

Another excellent fence is constructed in the following manner; set iron rods three feet high—about 3/4 inch iron—in a stone foot or bottom, and bore inch holes in the ends of the cedar, ash or poplar rails, dropping them over the rods. Have the fence about five rails high, and when completed secure them by a small key through the rod. If placed in the zig-zag or "worm" manner, the fence would be more substantial, though we have seen it built on a straight line, and standing firm and erect. It forms the prettiest fence we have ever seen.

Simple Receipt for Making Vinegar.—T. B. Miller of Clayton, Ind., has communicated to the New-York Farmers' Club the following simple recipes for making vinegar: "Fill nearly full any vessel, jug, crock, pan, tub or barrel, with pure rain or soft water, sweeten it with any kind of molasses, (the quantity is not material), set it in a moderately warm place, in the sun, cover with sieve, gauze or net, to keep out flies and gnats. In due process of time it will be vinegar, when it must be put into a suitable vessel and stopped close.

To convert cider into vinegar—if made from sweet apples, it is only necessary to set the barrel in a warm place and knock out the bung; if from sour, stir in a little molasses, and when sour enough bung up tight. Vinegar barrels should be well painted, as they are liable to be eaten by worms.

It will be proper to state that it is the action of the atmosphere, which in time converts the sweetened water into vinegar, hence the greater the surface exposed to its influence the sooner it will sour. There is a thick scum rises on the top of the vinegar when making, which is the 'mother,' and should not be thrown away.

LOUISVILLE, Dec. 26.—Morgan's command, about 3,000 cavalry, entered Glasgow Wednesday. Three companies of the 2d Michigan cavalry opposed their entrance, but fell back on Munfordsville, having lost one captain and two privates. The rebels lost two captains, five privates and seven prisoners.

The rebels were then reinforced and remained in possession of Glasgow.—Thursday, Colonel Gray and Shanks attacked the rebels at Bear Wallow, Heart county, near Cave City, the rebels previously having damaged the railroad near Glasgow Junction.

At last accounts the Federals drove off the rebels, killing one and taking sixteen prisoners, but sustaining no loss. The train of ammunition cars which left here this morning was fired into at Nolich, and returned. No Nashville passengers.

A train left here this morning. Telegraphic communication between here and Nashville was interrupted this morning.
