AGRICULTURAL.

R. W. Furnas, Editor.

☞ THE NEMAHA COUNTY AGRICULTURAL AND MECHANICAL ASSOCIATION will hold its Third Annual Fair at Brownville, **September 22nd, 23rd, 24th and 25th, 1868.** Competition open to the world.

Important Article.

Next week we will commence the publication of the report of the committee appointed on the part of the United States to visit the Paris Exposition, to obtain and report all information relative to the cultivation of the Grape and the manufacture of Wine. The report is detailed, and is the most valuable paper ever published on this subject. Our readers will do well to preserve the papers containing it.

Half Fare Rates for State Fair.

The following letter from the Assitant Superintendent of the Council Bluffs and St. Joseph Railrood to C. H. Walkar, Esq., Secretary of the State Board of Agriculture, gives the gratifying information that railroad has generously promised half fare rates to those attending the Nebraska Fair by way of that road:

C. B. AND St. JOE RAILROAD,
Superintendent's Office,
COUNCIL BLUFFS, Aug. 4th, '68.

C. A. WALKER, Esq., Neb. City:

Dear Sir:—Your letter of the 3rd inst., is at hand. Will say in reply that all people who attend the "Fair," on the "Line of our Road," we will carry them at one half our regular rates of fare. The above I trust will be satisfactory.

Yours Respecfully,
D. S. RICHARDSON, Ass't. Supt.

An Omission.

By mistake the following class "Field crops," in the Premium list of the Nemaha County Agricultural and Mechanical Association, was omitted in the printed list. It should have appeared as class No. 9. It now stands as class 9½:

CLASS 9½—FIELD CROPS.

	1st Best	2nd Best
One acre Wheat	$4	$2
One acre Corn	4	2
One acre Oats	4	2
One acre Barley	4	2
One acre Potatoes	4	2
One acre Sugar Cane	4	2

1. The land shall be measured by some competent person, who shall make affidavit of the accuracy of the measurement and the quantity of ground.

2. The applicant shall make affidavit according to the forms annexed, to the quantities of grain raised on the ground entered on the Premium List, which affidavit must accompany the applications for premiums together with a sample of the grain.

(FORMS OF AFFIDAVITS.)

——County, ss. A. B. being duly sworn, says he accurately measured the land upon which C. D. raised a crop of——the past season, and the quantity of land is——acres, and no more. A. B.

Sworn to before me, this——day of——, 186—. ——Justice.

——County, ss. C. D., being duly sworn, says that he raised a crop of——the past season, upon the land measured by A. B., and that the quantity of grain raised thereon was——bushels [or measures, as the case may be] and no more, to the best of his knowledge.

Sworn to before me, this——day of——, 186—. ——Justice.

Why Bees Refuse to Stay in the Hive.

Bee keepers often experience great difficulty is getting a swarm of bees to stay in a hive. Not unfrequently a few hours, and sometimes even a day or two, after a swarm has been hived, it suddenly swarms out, and either go to the wood, or clusters again as at first. Their are various reasons given for their doing so, many of which however, are not correct. It is said by some that if a nail appears on the inside of the hive, or if the hive is planed on the inside, the bees will not stay in it. Others, again, affirm that bees will not stay in a painted hive, because they do not like the smell of the paint, and many other equally absurd notions are entertained by some bee keepers. Such reasons, however, are but the flickering rays of superstition, fast fading out before our rapidly increasing knowledge in the science of bee culture. The principle cause of bees leaving a hive after having been newly put into it is, too great heat. When a swarm of bees are cast, they rush from the hive under great excitement, causing much animal heat. They are then, not unfrequently, put into a hive which has been standing exposed to the sun, and are then left with the rays of the sun still falling upon the hive. The consequence is the heat becomes so great in the hive they are compelled to leave. If the hive is new or recently painted, the heat will, of course be greater. Care should be taken to keep the hive well shaded, and if the weather is excessively hot, it is well to wet the hive with cold water two or three times a day for two or three days. Bees will sometimes leave from other causes, such as being hived without a queen, the queen being lost or killed; or if they had found a home in some hollow tree before they swarmed they prefer it to the hive, and accordingly leave and go to it. Such instances, however, are rare, and the more frequent cause, as before said, is excessive heat in the hive.—*Canadian Farmer.*

Value of Turnips.

From an article in the *Ohio Farmer* we copy the following: "Farmers in this country are slow to work into the habit of raising roots for stock, and the neglect is doubtless attributable to the lack of barn cellars, or convenient room for storing vegetables during winter—a hinderance easily overcome. Nearly all who fed roots give testimony in their favor, believing that they are more profitable, especially for milch cows, than grain. Beets and carrots are generally considered the best, yet turnips hold a prominent place, and if the first have been neglected this season, there is now time for attending to the latter. In some of the old countries the turnip crop is considered one of the most valuable raised, for it is prized not only as feed for stock, but as a fertilizer and a purifier of the soil; and why can it not be made use of here for the same purpose?"

Don't Try to Winter Too Much Stock.

Let every farmer now prepare either to get rid of his surplus stock or to store enough to keep it all through the winter. It is astonishing how many farmers there are who habitually undertake to get through the winter with more stock than they can properly feed till grass grows again. If you have ten, fifteen, twenty or thirty head of horses and cattle, and are not positively certain that you have enough hay, straw, stalks, &c., to keep them all in good order till spring, dispose of them before cold weather sets in. Make arrangements now so that you will not be caught with barn-yards full of lean cattle and empty mows in the months of February and March.

Buying Fruit Trees.

The following appears in my last: "Some claim that it (the loss in the enterprise of fruit growing), is in part on account of no pains being taken in taking up and *transplanting* fruit tree stock *by* the purchaser. But few of the many who transplant fruit trees at present, superintend taking them up. Fruit trees are sold mostly by dealers or agents, who canvass the country, taking orders for fruit tree stock, to be delivered at a designated place at a certain time. If the canvasser is a fruit tree dealer, he buys his trees of nurserymen, and superintends the packing, shipping, and delivering of the same, and, *sometimes*, taking them up. If the canvasser is an agent, he is employed by a fruit tree dealer or a nurseyman, who sends him out to sell his stock. The only difference between a fruit tree dealer and his agents, and a nurseryman's agent is, the former sell what the dealer can buy, the latter sells his employer's stock. And of either or both, who orders their stock? Or in other words, who sets the most fruit tree stock? Is it those who understand fruit tree growing, and know what they want? Not at all. It is the farmer, mechanic, tradesman, lawyer or doctor; men of all kinds of business and professions, who have land, or a plot for a house and garden, which they call their own.

That these men all understand their regular profession or business, one would be foolish to question. But do they all understand fruit growing? Do they understand the nature of fruit trees and their requirements under certain conditions? They certainly do not.

Suppose a case: An agent approaches a man in a certain section to sell fruit trees. The man thinks that he knows what he wants. He has seen "such and such" thing doing well in the neighborhood; perhaps he has some trees of his own in a sheltered or favored place, and wants more like them; or it may be he has procured a list from some one in whose knowledge of fruit growing he has confidence, which confidence may be based more on such individual's good talking qualities, than anything else, and he orders from it. One half of the list may be of local varieties, or local names. The agent will do the best he can, but when he comes to pack the order, many or most are not to be had, and to help him out, he has to avail himself of the privilege given him by a little paragraph contained in most agent's orders, "if the varieties ordered cannot be had, others equally desirable may be substituted." Now, who is to be the judge? The nurseryman, of course. And what varieties are equally desirable? Why, the varieties he has most of. They are even more desirable. For why should he have put out and had so many more of them if not more desirable? But even with all these chances against him, the purchaser often stands much chance of being benefitted by the change.

Z. C. FAIRBANKS.

Appleton, Wis.

Grafting Apple Trees.

Having had more than fifty years' experience in grafting, and having read all that has come to hand on this subject, I give the following as practical directions:

Cutting Scions.—For late grafting they should be cut early. In 1863, I cut scions in the month of November. Some of these were set in June following, and all lived. When caterpillars are scarce, scions do best set in April, but when these pests are thick, (as in 1863), late graftings may be protected from their fatal depredations by placing the lower bud one-fourth of an inch below the top of the cleft, and covering the bud entirely with wax. The wax does not hinder the starting of the bud, and when scions are thus set, during the latter part of May, the swarms disappear before the buds appear. I have often known them to kill the upper bud or leaf while the lower one was shielded. And, besides, when scions are set in this way, they are less liable to be broken by wind or by the weight of birds that may alight upon them.

Splitting the Stocks.—A thin knife is preferable to a thick one, as the stock is generally cross-grained or twisting. A thin knife driven down about one inch, cuts a smooth place for the scion. My knife is made from a piece of a wood-saw plate, set in the back of a joiners fine saw, near the centre, and ground to an edge.—*Corr. New England Farmer.*

Rocks about Grape Vines.

The *American Journal of Horticulture* thinks rocks are an advantage to grape vines. It says: "The whole secret of the thing is, the rocks absorb the heat of the sun by day, and give it off at night; keeping the roots of the vine warm, and the temperature about it more fully equalized. The same principle is observed in cities, where grape vines are trained in front of brick walls, which absorb the heat by day, and reflect it when needed by the vine. We propose to test more fully the value of such treatment for the vine by placing stones about the roots of several bearing vines, in different parts of the vineyard where they failed last year to ripen a single grape."

NORTH MISSOURI
RAILROAD LINE
TO SAINT LOUIS!
TWO DAILY TRAINS.

Both Daily Trains of the Hannibal and St. Joseph Railroad from the west make close connection at Macon City with the above line, arriving in St. Louis and connecting directly with all morning and afternoon trains out of St. Louis for

New York, Philadelphia, Boston, Washington, Baltimore, Harrisburgh, Pittsburg, Columbus, Dayton, Cincinnati, Indianapolis, Chicago, Louisville, Nashville

And all Points East, North or South.

The only direct and legitimate route from the

West to St. Louis and the East.

Time to the Eastern cities as QUICK as can be made by any route, with *LESS CHANGE!*

Tickets via the above line can be purchased at all Hannibal & St. Joseph ticket offices in the west.

Fair the same as by any other Route!

L. M. Dunn, General Western Agent.

NOTICE.

I have this day sold my entire interest in the painting business to J. K. Fretz. Thanking my friends for the liberal patronage bestowed on me for the past eleven years, I hope they will continue the same to my successor in business, as Mr. Fretz is an experienced painter, competent to perform all work entrusted to him in a workmanlike manner, and on reasonably reduced cash terms.

All persons knowing themselves indebted to me will please come and settle the same.

August 10th, 1868. LOUIS WALDTER,

The undersigned will continue

C. AULTMAN & Co's
"SWEEPSTAKES."

THE ONLY GENUINE
"SWEEPSTAKES"
THRESHING MACHINE.
C. AULTMAN, Manufacturer, Canton, Ohio. | HENRY H. TAYLOR, Gen'l Western Ag't, Chicago, Ill.

TWO STYLES OF HORSE POWERS.

The Improved "Carey" Power,
(Both eight and ten horse.)

THE "COMPENSATING" POWER,
(Both eight and ten horse.)

A laudable ambition exists among threshers to "own the best machine in the neighborhood." Nothing is more disagreeable to them than to have farmers complain that their work is not properly done, or to lose valuable time by reason of breakages, and they cannot be too careful in selecting a machine.

The Sweepstakes is the accredited head of the Threshing Machine family, and its superior strength, durability, simplicity, ease of draft, style of finish, and capacity for threshing and cleaning grain faster and better than any other in the world, are acknowledged.

The great reputation achieved by this favorite machine has led several unscrupulous manufacturers, and numerous agents, to attach the name "SWEEPSTAKES," in one way and another, to their machines and advertisements to mislead and deceive.

This is the essence of meanness—downright piracy, and salling under false colors. To avoid the counterfeit, see that every machine has the card, "C. AULTMAN & CO., MANUFACTURERS, *Canton, Ohio,*" in gilt letters, conspicuously on both sides of the Separator.

The Genuine Sweepstakes enables the thresher to pick his customers, seldom stops for repairs, lasts much longer than others, saves much grumbling and vexation, does the same amount of work with less labor, and enables him to select the best and most profitable jobs.

The farmers give it a preference, and often an extra price per bushel, because it threshes clean from the heads, separates perfectly from the straw, cleans fit for market without waste, saves all the grain, does its work with the utmost speed, safety and economy, and does not keep a gang of men and teams about them on expense.

The elegant "Patent Pivot Side Gear" is to be found only on the SWEEPSTAKES.

Our "Patent Cleaning Apparatus" enables the operator to control the direction of the blast, and position of the selves, and clean either heavy or light grain, without waste, as fast as it can be threshed,—the chaff and dirt being separated from the grain *before it strikes the selves at all.*

Separators, Horse Powers, Straw Stackers, Gears or Jacks, sold separately, when desired. A written warranty delivered with every machine. The "SWEEPSTAKES" is usualy a very scarce article after harvest, and parties should *order early.*

Call or send and get a pamphlet circular, giving a full description and particulars, together with numerous certificates, and the names and residence of over three thousand persons who have bought and used the SWEEPSTAKES in Illinois, Iowa, Minnesota, Wisconsin, and Kansas, alone.

THE BRINKERHOFF
Corn Sheller,
Separater and Cleaner!

Manufactured and sold by
J. GARSIDE,
ATCHISON, KANSAS.
The trial of this machine at various County and State Fairs, and the judgement of every one who sees and uses it, unite in pronouncing Brinkerhoff's Corn Sheller the best ever invented. With it a man can shell his crop of corn at his leisure without an assistant, and thereby save in a short time more than than the cost of a sheller.
This Corn Sheller has taken the first premium for three years past at the New York State Fair, when but partially perfected. It has since been brought to a degree of perfection, which makes it complete.
The following is the report of the Judges on this machine, at the great trial of Agricultural Implements held at Auburn, N. Y., in July, 1865, under the auspices of the New York Agricultural Society.
Amon the machines on exhibition was a Hand Corn Sheller, Separator and Cleaner, exhibited by J. Brinkerhoff, Auburn, N. Y. We have carefully examined and thoroughly tented this machine, and have no hesitation in pronouncing it the BEST CORN SHELLER WE ENER SAW. It readily adapts itself to ears of any size or shape, shells clean, and with great rapidity and ease, and the same operation separates the corn from the cob, and the chaff from the corn, and delivers the corn ready for market; and it requires but the labor of but one person to operate it. The whole affair is simple in construction, and durable.
J. S. GOULD, Pres. N. Y. Ag. So.
B. P. JOHNSON, Sec. " " "
S. ROBISON, Ag. Ed. N. Y. Tribune.
S. E. TODD, " " "
Reports of Arieultural Fair Committees, and opinion of Agricultural and other Journals, might be cited at great length, but we content ourselves with the following letter as capping them all:
(Copy of Letter from U. S. Agent for Paris Universal Exposition.)
No. 40 Park Row, Times Building.
NEW YORK, Dec. 8th, 1865.
MR. J. BRINKERHOFF, Esq.,—*Dear Sir:* My Advisory Committee, appointed to select Implements for Exhibition at the Universal Exposition in Paris, in 1867, have selected and recommended to me your Corn Sheller as the best in America.
I have accepted their report, and will forward your Sheller, if delivered here ready for shipment, on or before January 1st, 1867.
Yours Truly, J. C. DERBY.
Price, $25 and $30.
According to finish and size of balance wheel.
Sample shellers shipped on receipt of the price, and warranted to give satisfaction, or the Machine will be taken back and the money refunded upon notice within a reasonable time. Address,
