USEFUL AND SUGGESTIVE

Alder leaves steeped in hot water and applied warm will speedily reduce or prevent swelling occasioned by cuts, bruises or wounds of any kind.

—A sure cure for chapped hands is something greatly to be desired. Try this: Wet your hands in warm water, then rub them all over with Indian this: Wet your hands in warm water, then rub them all over with Indian meal; do this twice, then in the water used to wash off the meal put a teaspoonful of pure glycerine. If it is not pure it will irritate the skin.—N. Y. To got through with his examination, one of the committee, an old farmer, said: "My friend, did you ever borrow any bags or jugs?". "Yes, lots of them." "Did you ever borrow your neighbor's newspaper?" "Yes, many with his examination, one of the committee, an old farmer, said: "My friend, did you ever borrow your neighbor's newspaper?" "Yes, many pure it will irritate the skin.—N. Y. pure it will irritate the skin. -N. Y.

—A wealthy old English farmer says that he has always selected his farm-hands after putting them through a whistling exercise. He never knew a whistling laborer to find fault with bed or board, complain of extra work, or be unkind to children or cattle. He is thoughtful, light-hearted, economical and good-natured.

A horse's head ought to be as free as his feet, except that the head must be used as the guiding part. It would be just as sensible to tie and brace up his tail when he is to be backed as to fasten his head when he is going forward. A horse of any spirit always holds his head where it ought to be when he is in motion.-Indianapoiis

-Pickled Peaches: Take six pounds of sugar to one quart of good cider vinegar, boil the peaches in this (after rubbing off the fur, or peeling them, as you prefer) until a broom splint will easily pierce the skin; stick some cloves into the peaches before putting them into the vinegar, and scatter a handful of stick cinnamon over them. Chicago

-There is no more healthful method of keeping the stables, sheds and pens clean than to give them a good coat of lime-wash. The wash is easily and quickly made, as follows: Slake a bushel of fresh lime in a pork, or other barrel, with water enough to make a thick paste, after which fill up the barrel with hot water, and let it stand for a few hours. This wash may be applied in various ways. It may be spread upon the walls with a large whitewash brush, and no pains need be taken to do a neat job. Whatever wash falls upon the floor in the operation is not lost, but helps to sweeten the stable or stall. The quickest and most satisfactory method is to use a force pump, by which the lime-wash can be thrown into every crack and corner. - Cleveland Herald.

To Prevent Pinkeye.

During the past few years owners of horses have been large losers of horses' labor and horses' lives by a disease commonly but erroneously called pinkeye. Local horse doctors have ignorantly treated it as such, and the owners have continued to use horses afflicted with symptoms, thereby losing many valuable animals that if properly used and treated would now be as valuable as ever. My opinion is that by careful investigation, every horse that has been afflicted and succumbed to it, if the truth were known, will be found to have had a disease nearly allied to it, if not identical with, pneumonia. Many horses have been taken suddenly, while driv-ing fast, on a sharp, frosty day, while others have got a cold, seemingly slight at first, and only showing the usual symptoms of a simple cold, and their owners have kept them at work, and in a short time the horse developed what was called pinkeye. By carefully following the disease through its entire course, I think that any intelligent person will find it almost identical with pleurofind it almost identical with pleuro-pneumonia—all its general weakness, never keep their balance in a bank. lassitude, swelling of limbs, want of appetite, and finally water thrown out by the overcharged and imperfectly working vessels of the system—more especially the lungs. Why horses should be troubled in this way, as never very generally before, is a mystery for the wise ones to attempt to solve.

The atmosphere may predispose the horse to it, as it has seemed to cause a large increase of late years of pneumonia

n genus homo. The thing for horse owners to do is to prevent and arrest the disease if possible in its early stages. First—I believe that fast driving on a very cold day is extremely dangerous to a horse, as several horses in the very act of going at a high rate of speed on our principal street during the past winter have actually given out there and then, and these horses have not been driven far enough to distress them in the least in warm weather. A horse in the stable where I had a good one wintering was taken, and they just saved him. On in-quiring of the owner if he had been driven fast, he said: "Not to my knowledge:" but on further inquiry I found that his hired boy had been trying his speed in the farmer's milk team. I believe that in almost every instance similar circumstances will be found to be the prime cause, and the horse has been kept to his work instead of being kept in a stable away from draughts of air, dosed with good tonic and fed on light food, till he shows strong symptoms of returning appetite. For a tonic I shall name something that will surprise most, if not all, of your readers, It is a strong tincture of quinine, made from alcohol, water, and quinine powders.

Give the horse heavy doses three or four times during the day and evening, and keep in a warm place with light

food, as I said before. The action of the quinine is similar to that in the human being—a preventive of fever, a gentle tonic and stimulant, thus assisting nature to throw off the

cold in a natural way. By taken these precautions I believe many valuable horses would be saved, and the so-called "pinkeye" would be rarely known. — Cor. Wallace's Monthly.

A Test of Insanity.

Some years ago in a Carolina town a crazy man was brought before the Examining Board to settle the question as to whether or not he should be sent to the asylum in Columbia. After the doctor got through with his examination, the jugs, bags and newspapers?" "Why, I carried them all back." The old farmer gave a blow almost as loud as a tugboat's whistle, and said: "Gen-tleman, he's no lunatie! Just simply a common liar, and all the asylums in the world won't cure a man of lying."

In the New York Herald we lately observed mention of the speedy cure of Thaddeus Davids, Esq., of the great ink firm, 127 William street, New York, of rheumatic gout by St. Jacobs Oil. - St. Paul (Minn.) Pioneer Press.

THE Colorado beetle has traveled to Europe, but the mosquito stays to hum.—Boston Com-mercial Bulletin.

WE like St. Jacobs Oil, and observe too that the Rt. Rev. Bishop Gilmour indorses the remedy .- Baltimore (Md.) Catholic Mirror.

ROUGH ON SAM.—Sam Rideout is an Austin clerk. He is personally not very attractive, and his morals are of a very inferior quality. One of Sam's peculiarities is to use mercantile to the control of the One of Sam's peculiarities is to use mercantile terms and expressions, no matter what subject is being discussed. He and a few friends were talking about clerymen and doctors the other day, and one of them asked Sam who his family doctor was. "Dr. Doesem supplies us with all we need in the physical department, and Parson Soothem furnishes us a full line of piety goods," said Sam. "Look here, Sam," remarked Gilhooly, "if Dr. Doesem is responsible for your looks, and Parson Soothem furnishes you with your morals, all I've got to say is, that they have shoved a lot of second-hand goods off on you, and they badly damaged besides. You ought to deal, from now on, with first-class houses. You have been swindled outrageously. To look at you one would suppose your good looks and manners were of home manufacture."—Texas Siftings.

Two Women .- A True Story.

A poor, invalid, widowed mother lay suffer-ing on a bed of straw in a shabby broken down tenement house in one of our large cities. Two Christian ladies called; one gave cities. Two Christian ladies called; one gave her a missionary testament and made a long prayer, the other ordered proper food and fuel to be given, but instead of sending a physician, she purchased a bottle of Dr. Guysott's Yellow Dock and Sarsaparilla for her. In a few weeks time the invalid was again out washing and ironing. To whom shall we give

Why should Arabi Bey be the favorite of the children? Because he is one of the Arabian Knights.

INVISIBLE POISON.

Works Its Way Into the Body and How to Counteract it.

One of the great scourges of the present year in all parts of America has been malaria. This is a trouble so treacherous in its nature and so dangerous in Its results as to justly cause apprehension wherever it has appeared. But there are so many erroneous ideas upon the subject that a few words are in order at a time when people are subject to malarial in-

Malaris, which means simply bad air, is the common name of a class of diseases which common name of a class of diseases which arise from spores of decaying vegetable matter, thrown off from stagnant pools or piles of vegetation undergoing decomposition. These spores when inhaled with the breath or taken into the system with water soon enter the blood and germinating there find a foothold, whereby the whole system is poisoned and the various functions disordered. When the germ theory of disease was first advanced it was supposed that these spores were of animal nature, and like the bacteria is diphtheria were propagated in the blood, but they are now conceived to be of vegetable origin, like the fungi found on decaying wood or in cellars. The source of this state of the air is generally swamps or stagnant pools, which, generally swamps or stagnant pools, which, partially dried by the hot sun, send forth vapors loaded with this maiarial polson. These vapors descend to the earth in the night, cooled by the loss of temperature, and breathed by sleepers are readily inhaled. Hence persons living near stagnant pools or marshes are liable to be afflicted with chills and fever, and such localities are never healthy, though they such localities are never healthy, though they are more so when the streams flowing into are more so when the streams flowing into them are pure, and also when the water is high. Again the drainage of houses, slaughter-houses, barns, etc., are a fertile source of malaria. One will often notice in coming into the neighborhood of one of these sluggish streams that pass through almost every village a most villatious smell caused by the offensive refuse which communicates its bad odor to the atmosphere capacially on hot days. sive refuse which communicates its bad odor to the atmosphere, especially on hot days. This absorbed into the system by the lungs or taken in through water, which also absorbs it from the air, poisons the blood and deranges the whole system. This poison is also developed in force in wells and springs when they become low, and the result of drinking these is the same as breathing the poisonous air. In a time of drouth the great quantity of vegetation that dries up in the meadows, stubble fields and pastures, the corn fields and forest leaves produces the same effluyis. On forest leaves produces the same effluyia. On the prairies when large tracts of prairie ground are turned over, the decaying vegetation is a

widespread cause of malaria.

The evils which follow malarial poisoning are almost infinite. Disease of a malignant and dangerous nature, accompanied by symptoms the most distressing are certain to manifest themselves and life is a burden so long as this poison remains in the system. The indithis poison remains in the system. The indications of malarial poisoning are loss of appetite, shortness of breath, pains about the heart, wasting of flesh and strength, despondency, nervousness, chilly sensations, unaccountable lassitude, dull pains in various parts of the body, headaches, dizziness, a coated tongue and dry mouth, night sweats, muscular debility, puffing under the eyes, an unusual color, order or sediment about the fluids passed from the system, etc. Any one of the above symptoms may be an indication of malarial poison in the body which necessitates immediate and careful attention.

But if malarial poison could not find a lodge-

tates immediate and careful attention.

But if malarial poison could not find a lodgement in the human body, it would be just as harmless as the oxygen of the air. The great difficulty is that, after being absorbed into the system, it produces obstructions in the stomach and lungs, clogs the circulation of the blood, affects the kidneys, liver and other organs, and brings on diseases of a most dangerous character. There is only one known way by which these diseases may be avoided or cured after they have once made their appearance, and that is by keeping the great pearance, and that is by keeping the great purifying organs of the body in perfect health. These organs are the kidneys and liver. No one whose kidneys or liver are in a perfect condition was ever afflicted by malarial poison. And when these organs are disordered, they not only permit, but invite, these diseases to make their inroads into the body. It is now admitted by physicians, scientists and the majority of the general public that one medicine, and only one whose power has been tested and proven, has absolute control of, and keeps the kidneys and liver in constant health and hence prevents malarial sickness. one whose kidneys or liver are in a and keeps the kidneys and liver in constant health and hence prevents malarial sickness. This remedy is Warner's Safe Kidney and Liver Cure, the most popular medicine before the American people, and sold by every druggist in the land. It fully counteracts the evil effect of malarial poison in the system, and not only banishes it, but restores the members which that poison has weakened. How we hit does this can be learned from the following:

does this can be learned from the following:

KANSAS CITY, Mo., June 26, 1882.—Moving from the State of New York to the Western country. I was attacked with malaria and general debility. I had lost all appetite and was hardly able to move about. I had tried a great many remedies, but nothing bettered my condition until I began using Warner's Safe Kidney and Liver Cure, which seemed to help me right away, and I feel as well as I ever have in my life. It is a blessing to people in this malarious country.

C. F. WILLIAM, 1412 Grand Ave., of William & Co., Hardware.

This great remedy has proven its power in

This great remedy has proven its power in innumerable cases, and is to-day more extensively used in malarial districts, whether in cities or in the country, than any or all other remedies for the cure of the same class of disease. No one can afford to trifle with the first symptoms of malaria, but instant care should be taken to check it on the start before its evil influences overshadow the life.

'ARE you not alarmed at your children playing on that cistern with the trap door open? Are you not afraid they will drop in some day and get drowned when you are not looking on," said one Austin lady to another whom she was visiting. "No," was the complacent reply; "we get our drinking water from another cistern that the children can't tumble into."—Texas
