the polar snows do not extend further, series of lectures on astronomy in Chi-cago, one of which related to the questherefore the same sort of climate it tion of life in the planets, in which he advanced the following interesting facts and theories, as we find them reported in the Daily Tribune:

MERCURY. To begin with Mercury, the nearest of

all these planets to the sun. The feature which strikes us first in dealing with Mercury is the great heat to which that planet is exposed. Mercury travels on an eccenby the action of the sun. tric orbit, and is exposed to a greater heat from the sun at certain times than at others. Mercury is at one time much nearer to the sun than in another part of his year. The year of Mercury is eighty. me so inconsistent that I put forward myeight of our days, so that in the course of self, or at least I adopted, the theory that eighty-eight days Mercury passes from a very great heat when nearest to a comparatively less heat when farthest from the storm, clouds, rivers, being produced, desun. But, even when the sun's heat is least, it is much greater than that to which our earth is exposed. The quantity of heat received by Mercury varies from this annoying theory that would put Mars altogether out of the scheme of an four times to ten times what we have. inhabited world, that it was only covered Only imagine what would happen to us at night by hoar frost, and that there was if the sun's light and heat were increased four-fold, and then extend your concep-tion to an increase ten-fold. I think I Windo M. Potter, of Davenport; Calvin D. Truesdale, of Rock Island; Charles Atkinson, of Moline; L. D. Whiting, of Tiskilwa; James L. Camp, of Dixon; W. H. Wells, of Peoria; F. D. Brewster, of Peru; William Reddick, of Ottawa; John Mahen, of Muscatine; A. B. Smedley, of Cresco, and D. B. Sears, of Rock Island.

could possibly have life there. In the Torrid Zone, at a certain height you same relation to that of this globe that the Torrid Zone, at a certain height you reach the snow line, and above that line oceans of Mars and its continents bear to ours. The oceans in Mars are very much there would seem to be no life; but yet it does seem possible that life may exist

But there is one circumstance that is overlooked in that. In reality when you go to the higher regions where the air is so rare, the sun's rays are not diminished. The air does not get warm; it does not Asia and Africa form another large island; and we have the oceans around the direct heat of the sun expose your in Mars. You can travel from any one hand and the heat is more intense than is easily bearable. Even with snow and ice leave the sea or land, according to your covering the mountain-tops the face and taste, if you are an inhabitant of Mars. ands are blistered by the heat of the sun. And then there is the small gravity of the We should have a more intolerable conplanet. If the gravity of our own earth were suddenly changed to the gravity in trast in Mercury than in the case of an atmosphere like our own. There would Mars, a pound weight would be reduced be very intense heat under the direct rays of the sun, and comparative cold in the shadow, and life would be almost unenfrom sixteen to six ounces, and the air would be reduced in the same proportion. It had been shown by a certain German durable to us; and if the atmosphere of stronomer that the period of rotation of Mercury were so thin there would be

Mars was 24 hours, 37 minutes and 2312 seconds, or thereabouts. Then another evaporation of all the water, and there seconds, or thereabouts. Then anot German astronomer, Keiser, imi

would be another condition opposed to ours. It appears to me that that difficulty is sufficiently great to make us doubt whether life can exist on Mercury; I will that, and he made the period of rota 24 hours, 37 minutes and 22 6-10 seco Well, then an English student of as omy, one who does not venture to himself an extrement not say such life as can exist on the earth, but any of the higher forms of life, under these conditions

Mercury is a planet waiting for the time when life may exist on it; when the sun's heat shall be sufficiently reduced, and then life will be as comfortable as it is was on earth. Here we are introduced to considerations of great importance in this point of view of life in other worlds. Though life now exists on the earth, there hig v have been long successions of ages during which life has not been possible on earth; and there may be long successions of ages during which life will be tolerable on the planets. A planet is intended to support life, but not for all time, but for a small portion of the planet's existence. years

Now, coming to the gravity of the planets. The gravity of Mercury, owing to its smallness, is so reduced that one the di was e

to its smallness, is so reduced that one pound would only press as four ounces or five ounces; and here we are intro-duced to a consideration of the impor-tance of gravity to ourselves. We some-times look on gravity and weight of 22 7-1

tion to show that it is produced by a force residing in the planet itself. Now there seemed probable prevailed there. Other is one argument derived from the rings features corresponding to the idea of the habitableness of Mars were noticed, scribed by Brewster as glorious bodies Some portions have a greenish hue, as reflecting on Saturn, and making up though there were occaus. The planet's for want of the sun. Instead of doing continents, or what we call continents, that, those rings cut off the sunshine were ruddy; and white surfaces some. When the winter of part of the planet is times seemed to form over these conti. in progress, and when more light is nents or oceans, and to melt away during wanted, the ring cuts off the light. So, the day, as if clouds were being dissipated if we are to argue from causation, if we are to say the Almighty intended that to The theory in relation to Mars was that be the abode of light, we have at once an t was a disc or globe covered with a hoar enormous difficulty brought before us. frost, and having other peculiarities differ-ent from ours. That theory seemed to it seems ill devised. It seems as if the

Instead of the thing being well devised, only time the ring reflected light was when it was not wanted, and when it was Mars is a globe like our earth, where all similar processes take place—rain, wind, storm, clouds, rivers, being produced, de-it off for a short time, but for eight and a half years a certain portion of sunligh nudation taking place-everything seemed half years a certain portion of sunlight so much like the earth. But then came is cut off, and for six of those years the whole of the sunlight is out off The largest of the satellites of Saturn is called Titan, and is certainly larger than

Mercury, and probably as large as Mars. How splendid must be the scene which everything in Mars unlike the earth inthe planet Saturn presents to its inhabit stead of like it. I determined to destroy ants! I does seem as though a scene of such wonderful beauty was not intended to remain without spectators. It presents through the telescope the most beautiful

Now a few words remain to me on the general question of life in the solar system. I must confess the more I study the matter I am convinced we are not bound, in order to reconcile us to the smaller proportionately than the oceans Almighty's work, to adopt the theory on our own earth. There is no Pacific that all or any considerable portion of there. In fact there is no Atlantic. You the planets are inhabited. We look back at the past history of the earth. have only oceans comparatively small; back at the past history of the earth, the lands and seas are intermixed. You and we find that the Creator is, in take the case of our own earth. The two our eyes, wasteful of His powers, though Americas form a single island; Europe, infinity can never be wasted. So in the question of time there has been no special care to make avail of every instant of the hose islands. There is nothing of that existence of the different worlds. We find that for millions of years back our part of Mars to another. You need not world was uninhabited, and we see, in regard to future condition, that even though there should not be destruction from fire, life will probably by other causes pass away from the earth. from considering that every member of the solar family must be inhabited at the present time, the chances really are millions to one against any special planet being inhabited, because the time it has been inhabited, if judged in apstomy with

part of the whole time in which the plan exists.
