Typhoid from Roof-Tanks.

A San Francisco paper has the following: "A gentleman of this city was recently prostrated by typhoid fever, caused, as investigation by his physician proved, of the Times states that "the jails in the particularly as very few fish are caught. by putrid water from the tank on the roof of his house. A heavy deposit of the green, vegetable slime which so rapidly accumulates in all of these tanks was found in this case. The gentleman's doctor informed him that he had previously attended several cases of typhoid fever produced in the same way. Doctors have several times warned householders of the danger to health from vegetable putres cence in water-tanks. These tanks are frequently not cleaned out for years, and are then found to be lined on the sides and covered on the top with a heavy coating of the pestilent fellows. The crowd looked on with breathless inof green scum, which is nearly as poisonwho are too inquisitive about their rights. The float bobbed, the line ran out, ous and injurious to the quality of the There appears to be some ground for this and after a struggle of a few minutes a ous and injurious to the quality of the water as the discharge into it of the leakage from a water-closet would be. All of these tanks should be cleaned out monthly or quarterly. A few pounds of clean charcoal in a net bag left in them would tend to check vegetable decomposition."

A PHOTOGRAPHER in San Francisco

There appears to be some ground for this last supposition in the statement of the Times correspondent that "the all put the grass. Mr. Bailey was astonished. But astonishment soon gave place to grief. Another, another, and still another companies, i... are portentous factors of an ever-present danger." This looks as though the "sedition" was on the side of the whites. The strong probability is

A PHOTOGRAPHER in San Francisco made a likeness for a man who refused to take the picture, claiming that it did not correctly represent him. He thought it made him uglier than the reality. The maker sued to recover the pay, and in the trial the picture was put in evidence and shown to the jury. The jury, by their verdict, decided that the defendant was as ugly as the photograph.

A PHOTOGRAPHER in San Francisco as though the "sedition" was on the side of the whites. The strong probability is that the blacks have not thought of any such thing as a massacre, and that, if they have organized at all, it has been for self-defense. This supposition is in accord with what we all know of the character of the blacks, and of their conduct before, during and since the war.

Of one thing we may feel pretty sure:

If the whites of Coarsio will report that the side of the whort it was on the side of the whort it won't have a grone far enough. Why, I won't have a trout left!!"

But the General did not stop just then. He went on until 200 pounds of the prettiest trout that ever took a fly were lying on the grass. Mr. Bailey was as good as his word. He paid the \$200, which was a like the picture.

The part of the whites, the strong probability is that the blacks have not thought of any such thing as a massacre, and that, if they have organized at all, it has been for self-the went on until 200 pounds of the prettiest trout that ever took a fly were lying on the grass. Mr. Bailey was as good as his word. He paid the \$200, which was his friends the next day cost.—Boston Traceller.

Carried out, for it is evident that if the considerable attention of maintaining an even temperature. ble, provoking human being he ever met people had been allowed to vote yes or no ture while ventilating school-rooms. He is beaten into his head by sheer necessity, with. What he does not think of is that on the question the negative would have described scholars as sitting very often to avoid starving; and he is told that such

The "Nigger Risin" in Georgia.

The Georgia "nigger risin" is explained. In Georgia they levy a poll-tax what is fair and proper, and she has been of one dollar nominally for the support of unreasonable and cross; but, after all, the schools. They also decree that no man shall vote unless he pays his poll-tax. They also punish illegal voting by imprisonment at hard labor for a term of years. In 1870 a Republican Legislature abolished the poll-tax for the very good reason that, while it was nominally levied for the support of schools, there were in uselessness with which he had been filling reality no schools to support. But when her head for a year or two, and, in com- the Democrats came into power in 1871 mon honesty, exact no more from her they revived the tax, and decreed that it than he had bargained for? Feeding and Care of Stock.

An animal well wintered is sometimes said to be half summered, and at the latter half of the winter season especially stock require their status to be well kept up. The great point is always to keep up the thrift, which does by no means imply that they must be fed to the standard of LAY & Co., Proprietors, New Orleans. taking on fat. No absolute rules for feeding can be well given, as this necessity lepends on the kind of stock, the object to be secured, the amount of shelter and protection from the weather, and a variety of other causes. Nothing requires more constantly critical perception and expericontrol of some one competent person. Too much given at a time, whether of hay, meal or coarse fodder, impairs the appetite and interferes with proper thrift,

besides being a waste of material. Animals differ much in their capacity for consumption, quite as much as people and what is a liberal supply for one will be a very scanty feed for others. They also have their likes and dislikes for particular kinds of food, and differ in their powers of digestion. All these points hould be under the observation of a skillful feeder, and require no little tact and judgment. In the winter season milk and butter are of more value than in summer and as without giving the cows good feed and treatment the milk and butter will not be forthcoming, cows in milk have Сноw-Сноw.—One peck sliced green | their remedy for bad treatment by stopping

one ounce of broken cinnamon, three- doled out to them in the scantiest manner, quarters pound of mustard seed, one and we have seen them go from their winund of ground mustard. Rag Carpets.

THERE are many ways to make them. A

If you wish to have a nice, smooth carpet, use six knots of warp per yard, but if you think I'm going to kill my horses? I upon them; but I never use less than w run the plow in up to the beam, and I more warp we use the less rags it will shall do no such thing." We examine the subsoil and find that tions and tastes. I never use blue nor yelthe land should be plowed about ten inches low, only in hit-and-miss, as I think it deep to produce the best crop of grass; so we argue the case with him, and finally persuade him to run his plow that experienced) is, how shall I stripe my lepth, provided that we pay any carpet? As I have a very pretty one, lamage that his team may sustain, and which has been pronounced by my friends also all the expenses of seeding down the prettiest rag carpet they ever saw, I the land, should it prove a failure, thought I would tell you how it is striped. The land being plowed we sow it heavi- I always make center stripes, because we ly to clover, with no other crop or grass- often wish to change ends with a breadth to Robert Wells, 43 Vesey et., 27 Y. D. C. Dox 128 seed, and the result is a good "catch" when partly worn, and you cannot do so

heavy roller over it; and the plowing un- center and give you a draft of each. The der of this crop, with its numerous and center of the light is what I call a candy deeply extended roots, is equal to a heavy stripe. I tore fine white cloth into fine oat of stable-manure in tertilizing the rags, then tore bright pink the same and. Early the next spring we direct width, twisted each, then doubled and farmer to procure a half-bushel of or- twisted them together; there are four ard grass-seed, the same of blue-grass threads of this, then three of salmon, and and a like quantity of red-top, with four pounds of clover-seed; and the whole is red, then six of black and green threaded, sown upon the aforesaid acre of land, after first a thread of one and then the other. owing it ten inches deep and harrowing Then seven of dark green and nine of it to a very smooth condition; then the light, then four threads of calico, which seed is brushed in carefully, and the result is a splendid crop of grass, worth the dark one—the center of this, the dark one, first season five times the expense of pro- is composed of five threads of beautiful ducing it. In like manner thousands of hit or miss-then three of purple and two old fields can be made very productive, of black, then three of nankeen color, and when farmers shall have learned how to nine of light and five of dark brown, then manage their lands in the best manner.— four of black, which joins the calico. But the wide stripes, like the green and brown, the wide stripes, like the green and brown, must be measured, of course, as it would not do to count thread in such wide ones. One can loop rags much faster than they can sew them, and some will do very well looped, but I always sew mine, and my carpets are so smooth they sweep almost as easy as a bare floor.

Yard for Pigs.

by the hot sunbeams or liquefied by the do not prove more profitable on a great ly and preserves its softness and moisture food to eat, but must constantly stay in a ticing. Address, with stamp, Sup't U.T.C., Oberlin, Oute to the last. Of this property the beetles in close yard or pen. For large hogs this requestion are taught by their instinct to striction is injurious, but for little pigs it vail themselves, and, inadequate as their is very much worse. Young animals want bodies may seem to be for such a task, liberty to exercise their muscles and clean they manage to bury beneath the surface of the ground any small animal that make the grass on which to feed. A few farmers N. W. TELEGRAPH INSTITUTE, Janesville, Wis.

the earth from beneath it, and so letting it gradually down. Even in our own country, where land is extensively cultivated, and where in consequence comparatively few carcasses are allowed to lie unburied, the burying-beetles are very numerous, and their work is really valuable. It is chiefly owing to their labors that a dead bird, mouse, rat, or any similar creature is so seldom seen. In bors that a dead bird, mouse, rat, or any similar creature is so seldom seen. In the first place all wild creatures, on feel joining their hog-yard, and let their pigs ing the approach of death, seek out some run a part of the time every day in this
