

SANFORD'S RADICAL CURE FOR CATARRH

It is the only medicine that cures the disease in its early stages, and prevents its return. It is a radical cure, and is the only one that is guaranteed to cure the disease in its early stages, and prevent its return. It is a radical cure, and is the only one that is guaranteed to cure the disease in its early stages, and prevent its return.

COLLINS' VOLTAIC PLASTER

An Electro-Galvanic Battery combined with a highly medicated strengthening plaster, forming the most effective remedy for rheumatism and neuralgia.

TUTT'S PILLS

For TEN YEARS TUTT'S PILLS have been the recognized standard Family Medicine in all the Atlantic States—From Maine to Mexico, scarcely a family can be found that does not use them. It is now proposed to make their virtues known in the West, with the certainty that as soon as tested they will be found as popular there as they are in the North and South.

TUTT'S PILLS!! DO THEY CURE EVERYTHING?

NO.—They are intended for diseases that result from Biliousness, Indigestion, and a Deranged Liver.

TUTT'S PILLS!!

DR. TUTT has devoted twenty-five years to the study of the Liver and the result has demonstrated the great influence over the system than any other organ. It is now proposed to make their virtues known in the West, with the certainty that as soon as tested they will be found as popular there as they are in the North and South.

TUTT'S PILLS!!

The first dose produces an effect which often astonishes the sufferer, giving a cheerfulness of mind and buoyancy of body, to which he was before a stranger. They create an Appetite, Good Digestion, and SOLID FLESH AND HARD MUSCLE.

TUTT'S PILLS!!

ALOUISIANA PLANTER SAYS: "My plantation is in a malarial district. For several years I could not make half a crop on my land. I employed one of your Pills, and in a few days my land was cleared of malarial fever, and I began to prosper. I used them as a preventive, and I have had no further trouble. With these Pills I would not fear to live in the malarial district."

TUTT'S PILLS!!

"BEST PILL IN EXISTENCE." I have used your Pills for Dyspepsia, Stomach and Nervousness, and you say I never had any thing to do me so much good in the way of medicine. I recommend them as the BEST PILL in existence, and do all I can to acquaint others with their good merits.

TUTT'S PILLS!!

THE HERALD.

The Bell-Punch in Politics.
North Carolina proposes to introduce the bell-punch for registering votes at elections. Then the popular song will be:
When he receives a vote the Inspector Will punch in the presence of the elector, A pen, check slip for a white vote, A key, check slip for a black nigger, And I, check slip for a bold elector, All in the presence of the elector, The above is from the New York World. To which we beg leave to add the following:
And if the elector of the elector And he be heard of wood instead of hair, And vote Republican fair and square, The Inspector shall at once prepare To punch the head of the elector That is covered with wood instead of hair.—Philadelphia Bulletin.

We have received a copy of An Insects State Drawing Book intended for the use of Common Schools. Commencing with the rudimentary lines illustrating in a number of different ways with the definitions of them, and thence proceeding on to the more difficult animal, flower, vase, and finally, heads, and the various features, it seems to take the pupil along insensibly, and by defining the various figures and the lines of which they are composed teaches him the foundation of what he is working with, and in short begins at the beginning in a practical manner.

There is scarcely anything which children enjoy the study of so much as drawing, and these books seem to us a most practical way of giving them a few short instructions every day, at a sum of rest to more arduous studies and at the same time acquaint them with at least the rudiments of an accomplishment which is useful in almost every business in after life. They are published by A. H. Andrews & Co., Chicago.

The Uses of an Enemy.

The Rev. Dr. Doerns, in the Sunday Magazine, gives the following advice, with the subjoined reasons:
1. Always keep an enemy in hand, a brisk, hearty, active enemy.
2. Remark the uses of an enemy:
1. The having one is proof that you are somebody. Men who never have never run against anything; and when a man is thoroughly dead and utterly buried, nothing ever runs against him.
2. An enemy is, to say the least, not partial to you. He will not flatter. He will not exaggerate your virtues. Of course, if you have a fault you desire to know it; when you become aware that you have a fault you desire to correct it.
3. In addition, your enemy keeps you wide awake. He does not let you sleep at your post. Your hater watches that you may not sleep. He keeps your faculties on the alert. He stirs you up when you are napping. Even when he does nothing he will have put you in such a state of mind that you cannot tell what he will do next, and this mental *qui vive* must be worth something.
4. He is a detective among your friends. You need to know who your friends are, and who are not, and who are your enemies. The last of these three will discriminate the other two. When your enemy goes to one who is neither friend nor enemy, and assaults you, the indifferent one will have nothing to say or chime in, not because he is your enemy, but because it is so much easier to assent than to oppose, and especially than to reprove. But your friend will take up cudgels for you on the instant.
5. The next best thing to having a hundred real friends is to have one open on my. But let us pray to be delivered from secret foes.—Advocate.

All Sorts.

The London fast young man says the greatest "bass-relief" is clearly "bass" pale ale.

Brain, a journal of neurology, is to be published quarterly by McMillan & Co., of London.

The Bagot will case in Dublin is said to have cost £30,000. Notice of appeal has been given.

If two omnibuses are racing, never hail the first, unless you want to be run over by the second.

The trustees of a Maine village resolved that "the walls of this room be whitewashed green."

Never keep your cattle short; few farmers can afford it. If you starve them they will starve you.

Dr. Kenely, in a recent speech in the House of Commons, declared that "the penny press was the devil's right hand."

The hair of a New Orleans belle will be bright purple until it recovers from her attempt to bleach it from black to yellow.

Lawyer Hart was so affected by the sequel of his client on the charge of murder, in Colusa, Cal., that he wept for joy and fainted.

A salmon was caught in Scotland with eighty yards of tapeworm, three sixteenths of an inch in breadth, in the pyloric portion of the gut.

A salmon has been caught in Scotland, the happy possessor of two roes. This freak of nature will be the means of consigning it to a museum.

Khediv, not Khedive, is the correct way of spelling Ismail Pasha's title. A authority—Capt. Burton, the traveler, who is intimate with his Highness.

The beautiful Pauline Markham's wardrobe, excepting a blond wig and "the lights" that she was wearing, were seized for debt in a St. Louis theatre.

In the island of Guernsey, one of the Channel Islands, is a tree of camellias 35 feet broad by 14 feet high. It is said to be the largest in Great Britain, possibly in the world.

The leak was adopted as a Welsh emblem in consequence of a command given by Dewi, who, after a great victory won by King Arthur, ordered the soldiers to put a leak in their caps.

In the olden time the Cape of Good Hope was called the Cape of Tempests, and was also known as the Lion of the Sea and the Head of Afr-ica.

A burglar broke into a store in South Framingham, Mass., and instantly found himself face to face with a clerk. Both had revolvers, but the clerk was quickest in using his, and the burglar fell.

A magnificent loan exhibition of picture and works of art is on view at Manchester, England, which for years past has been the great absorber of objects d'art offered for sale in that country.

Two of Bismarck's nieces, with whom he had quarreled for some reason reported as futile, were lately applicants at a London agency for situations as governesses. They required the families to be titled, and doubtless demanded a handsome compensation.

According to the tables in the arithmetic, four rooks make one acre, but we have known one acre to make one rook. The acre was on his foot, and his friend trampled on it. It was an acre of corn, as it were, and thereafter the friend was cornered.

The following advertisement is taken, word for word, from the North British Advertiser: "Wanted, a place of solitary retirement by a person 30 years of age, who wishes to exclude himself from all society and live as a hermit, for any period not exceeding seven years, on suitable terms."

Up to the seventeenth century lace dresses were in France restricted by a sumptuary law to royalty. In 1491 a lace dress was presented to Anne de Bretagne, on her marriage with Charles VIII., which was valued at a sum equal to-day to \$250,000. It was entirely of point de Venise.

There is great danger in wearing damp clothes, because when a liquid passes on to the state of vapor there is a great absorption of heat. In the animal economy, heat is generated in the system and given out by the body. If the clothes are damp this heat is abstracted faster than a new supply is formed by the process of respiration, and the result is what is termed a cold.

It seems from a recently published blue book on drunkenness in Scotland that the permission granted some years back to grocers to sell liquors has been attended with very bad effects, so far as women are concerned. Whisky is frequently put down in the bill which they have to pay under other heads. In 1859 125 women were arrested in Kilmarnock for drunkenness; in 1876 no fewer than 270.

Some years ago a man in the North of England proposed for a small wager—that he would, at four distinct intervals, deprive a bull dog of one of his feet by amputation, and that, after every individual deprivation, he should attack a bull with his previous ferocity; and lastly, that he should continue to do so upon his stumps." The experiment was made, and the result demonstrated the truth of the prediction.

The forts round Rome are being pushed on vigorously, although there seems no immediate prospect of need for them. Several contractors having declared that, on account of the unhealthiness of the summer, they would be unable to complete the fortifications at the period appointed, considerable sums have been offered them as premiums if the works are finished before the end of the year.

A patient in the hospital of Beaufort, in France, rushed, during a moment of insanity, upon a sister of charity who was bringing him his food. He cut her hand, but was prevented from slaying her by a man named Hamard, whom he stabbed in the eye. He then entered the female ward and killed three women. The rest fled. One among them had been paralyzed for several months, but under the influence of terror was able to jump from her bed and run. The man was secured.

Western Pennsylvania dairymen who are proprietors of cheese factories, have inaugurated a very remarkable feature of instruction in connection with their factory system. Some twenty factories have secured the services of Prof. Arnold to instruct the factory-men, showing them his methods, while in the evenings he is to lecture to both patrons and factory-men. One day it is to be devoted to each factory. Would it not be well for dairymen of other sections to take the hint and act accordingly?

All meat-producing animals should be killed when they are in the coolest state, or when respiration is the least active. Their flesh will then keep much longer fresh, and be more healthful, and will be more easily digested in a heated condition, or immediately after a hard drive, the flesh will take longer to cool through, spoil sooner, while the flesh and fat will have a dark, feverish look, caused by being killed in appearance or so healthy as usual.

Adam was a farmer in Paradise; Job the honest, upright and obedient, was a farmer; St. Luke was a farmer, and so was Cincinnatus; Darius was a farmer, struck the miser found him at the plow; Washington, Adams, Jefferson, Randolph, Lincoln, besides a vast number of other great and representative men, were farmers. Truly, the profession has been amply dignified by its votaries.

The hopeless fight of the Rev. L. H. Boyle against his appetite for alcohol ended with his suicide in Indianapolis. He was the son of an eminent Methodist clergyman of Kentucky, and was carefully reared and educated. He practised law a few years, and then was editor of the St. Paul Pioneer. Through drunkenness he lost influence and position, but after a seemingly thorough reformation, he entered the Methodist ministry and was made pastor of a wealthy church in Hutchison Ky. His remarkable talents led to great popularity. He was twice tried on charges of intoxication, but his fault was in each instance forgiven. One day he was found lying drunk at the roadside, and the matter was so public that he was compelled to retire from the ministry. He declared that he was unable to do without alcoholic stimulants.

A curious phenomenon has, says a French scientific journal, been observed at Vernon, in France. Five or six years ago lightning struck a garden planted with gooseberry bushes and cherry trees, making a deep hole, the orifice of which was not above a yard in diameter. Subsequently everything died round about. The death circle enlarged year after year, until it is now about eight yards in diameter, and has just reached a cherry tree which planted twelve years ago, which has died like the rest. The cause of the evil was evidently the lightning, but it is difficult to explain why its morbid action continued to steadily gains ground. The lightning possibly generated in the soil chemical compounds injurious to vegetation, or burned the humus.

The Mangold Wurtzel. Besides arguments which are of weight for cultivation of all kinds of roots, there are special ones for raising that of mangolds. The vast bulk of yields exceeds that of any annual crop, as high as eighty tons of roots having been raised to the acre on the sewerage farms of England, and when kept long in succession, as Mr. Mechi, the distinguished English agriculturist, has proved by raising sixty tons per annum on the same tract of land of six acres area, for six successive years. It will keep long in succession, as Mr. Mechi, the distinguished English agriculturist, has proved by raising sixty tons per annum on the same tract of land of six acres area, for six successive years.

It would seem, remarks the American Dairyman, that the abundance and low price of cheese ought to turn the attention of our dairymen to the development of our home markets. The consumption of cheese in America decreases instead of increasing, and we are dependent wholly on the foreign market for the establishment of prices. With cheese low, it is the cheapest food that the people can eat. If given a fine article they would soon learn to eat it. Can not our dairymen manage to reach the consumer with a tempting article?

H. A. WATERMAN & SON Wholesale and Retail Dealers in PINE LUMBER, LATH, SHINGLES, SASH, DOORS, BLINDS, ETC., ETC. Main Street, Corner of Fifth, PLATTSMOUTH, N. B. Still Better Rates for Lumber.

Domestic Recipes. Rice Pudding—To each quart of milk one tablespoonful of rice, sugar to the taste; bake three hours. Frequent stirring makes the pudding creamy.

Corn Starch Cake—Whites of two eggs, half a cup butter, one cup sugar, one cup flour, half a cup corn starch, half cup sweet milk, two teaspoonful cream tartar, one spoonful soda.

Indian Pudding—One flat cup yellow Indian meal, one quart boiling milk poured upon it; allow it to cool; add two eggs well beaten, and one teaspoon baking powder; a dash of nutmeg; top if liked with brown sugar.

Eggs in Cream—Pour into a flat tin dish cream to the depth of a quarter of an inch; bring to a quick boil and then drop in the eggs and cook until the whites are hard; season to taste and serve in the same flat tin dish.

Ramequin Pudding—Three-quarters of a pound of suet, one pound of flour, to be divided to each of a pound of bread crumbs, quarter pound flour, two eggs, juice and grated rind of a lemon, half a nutmeg, a little mace, two cloves, fine. Boil three hours.

Baked Blunard—Cut the pieces about an inch in length; weigh; allow as much moist sugar as flunard, and bake in an earthenware dish; when killed in a heated condition, or immediately after a hard drive, the flesh will take longer to cool through, spoil sooner, while the flesh and fat will have a dark, feverish look, caused by being killed in appearance or so healthy as usual.

Catskill Milk Potatoes—Take good, sound potatoes, cut them in slices, (raw) and put the milk, according to the quantity you wish to make, in a pudding dish, then, after you have put the potatoes in the dish, let it stand over for about 20 minutes, then take out the potatoes with the same milk into a saucepan to boil until done; season before you put them to boil.

Curing Felons—Prof. Huter, of Berlin, cures bone felon or whitlow by first probing the swelling of the finger, making a small incision where the pain appears greatest. The pain of the operation may be lessened by the local application of ether or inhalation of chloroform. The after-treatment is equally simple. The small wound is to be covered with lint and carbolic acid, and bathed morning and evening. In a few days it is perfectly healed.

Scrambled Eggs—Have your spider hot and buttered as soon as you are ready, with six eggs broken into a dish, to which you add a little salt, a "shake" of pepper, a bit of butter of the size of a nutmeg, and half a cup of rich, sweet milk. If you have it, it will do without. Beat up a little, just enough to break up the egg, then pour into the buttered spider. Scrape your spoon back and forth to prevent their adhering to the bottom of the spider. Do not cook too dry, a few minutes will cook them; then pour out on a plate, and nicely browned and buttered toast. This is nice for breakfast or a lunch.

Orange Salad—Peel one dozen oranges, and cut in slices; put in a glass dish, sprinkling each layer plentifully with sugar. Squeeze over this the juice of six oranges, and pour over all a glass of wine or brandy.

Feeding Mangolds. Were it not for the enormous loss that an acre will produce in roots when compared with its yield in hay or grain, there would be a serious argument against the growing of mangolds to any extent beyond what might be needed for medicinal purposes, in the fact that the manure made from them is of so low a value; and the practical weight of this argument would grow in proportion as farmers acquire a knowledge of the most important department of farming. To most farmers a cord or load of manure of cow or horse is a cord or load of equal value; now this is far, very far from being the fact, as will be seen by the following table which is taken from the Scientific Farmer, compiled by the celebrated Mr. Lewis, who, by his careful experiments has laid the agricultural world under lasting obligations. In this table a ton of English hay is taken as the standard and were all the manure saved, both solid and liquid, from a ton of each of these varieties of food, the ingredients at the market value of the Ammonia, Potash and Phosphoric Acid would be worth as follows:

Hay..... 10.00
Clover Hay..... 15.00
Out Straw..... 4.10
Wheat Straw..... 3.50
Secured Cotton Seed Cake..... 45.00
Linnseed Cake..... 30.00
Malt..... 10.00
Wheat..... 11.00
Barley..... 8.00
Mangold..... 1.00
Swedish Turnip..... 1.50
Turnip (common)..... 1.50
Carrots..... 1.50

This table is very suggestive in many ways,—by it we see that there are varieties of food, the manure from which is worth more than the cost of the food itself. In its application to the feeding of mangolds, it at once suggests the wisdom of feeding at the same time a portion of something richer and more concentrated. By so doing the quality of the manure is vastly improved and the crops will not be starved. It is a glance suggests the wisdom of feeding at the same time a portion of something richer and more concentrated. By so doing the quality of the manure is vastly improved and the crops will not be starved.

It would seem, remarks the American Dairyman, that the abundance and low price of cheese ought to turn the attention of our dairymen to the development of our home markets. The consumption of cheese in America decreases instead of increasing, and we are dependent wholly on the foreign market for the establishment of prices. With cheese low, it is the cheapest food that the people can eat. If given a fine article they would soon learn to eat it. Can not our dairymen manage to reach the consumer with a tempting article?
