## The Grasshopper

Historical Review of the Ravages and bury b fore the onference of Governors at Omeha, October : 6, 1876.

cult to obtain information regarding the nature and habits of the locusts or grasshoppers, no particular methods for their extermination or for protection from their rayages have yet been found to any satisfactory extent. We can learn without much trouble of the great destruction made by them in the different States, and especially in the Mississippi Valley, but the vital necessity of the hour-a necessity connected with the best interests of agricultureis a speedy, practical remedy for the great evil. The Bureau of Agriculture at Washington, established for the advancement of our great agricultural interests, is nearly silent in regard to locust or grasshopper devastations, the attention of the Department not having been directed to the investigation of the subject. Is there not a great

Farmers using the Champton Double Hog Ring, can obviate the accumulation of dirt on top of the hogs nose by inserting the ring so as to bring the cross bar in front of the nose and not on top. Many farmers use the Cham pion with cross bar in front of the nose altogether. The Double Ring when carefully inserted is the best Hog Ring in the market, it having no sharp points in the nose. The Brown Single Ring closes on the out te of the nose and is the best single ring. CHAMBERS & QUINLAN, Decatur, Illinois, are manufacturers.
