*baby bones are soft, so soft they scarce can be called bones in the earlier years; gradually they harden. and furnish the frame which supports the growing body. The hardening comes from what chemists term "the mineral substances."
When these are absent we have "Rickets"-a lack of bone-tissue, which shows itself in delayed teething, profuse head-sweats, and later, if not arrested, malformations and deformities.
Such a baby needs lime for its weak bones and cod-liver ail for its fat-starved body.
Scott's Emulsion of Cod-liver Oil with Hypophosphites of lime and soda will give its little body the needed fat in an easy form.
