The editor of a local paper is the most thoroughly criticised individual of a community. To escape criticism he would have to be a member of all churches and none; a prohibitionist and a drunkard at the same time; a married man and single one at once; a philanthropist and miser at once; a saint and a sinner, a genius and a fool; a hypocrite, a backbiter, a liar, a rascal and the opposite of each.—Ex.

A measure capable of holding Nebraska's wheat crop would be seven times as high as the New York city hall, or to be exact, 754 feet, and 300 feet in diameter. The capacity of a ten ton freight car is 240 bushels of wheat. To move this it would require 117,647 cars, loaded to their utmost. The average train of loaded cars consists of 25. It would require 4,706 full trains to transport the crop. The average box car is thirty feet long. Put these 4,706 trains in line, and they would extend a distance of 668 miles.

Some Beatrice merchants have been done up by an advertising fakir who had a scheme. The fakir stayed in town a few days, working the business men, and then rented a bicycle of Hoffstot, and left town in a blaze of glory. He paid a dollar for the bicycle, and shipped it back here from Valley, and Mr. Hoffstot had to whack up a dollar and a half express charges. Merchants will probably learn wisdom from experience in the course of time. When they have advertising to do, they will give the marble heart to oily tongued strangers, and patronize the local newspapers which are trying to help them and the town all the year round.—Beatrice Express.
