Mississippi's Great Stone Wall a Puzzle to Archaeo logists.

Wonderful and Massive Structure That Has Withstood the Ravages of Many Thousands of Years in Clathourne County.

One of the scientific puzzles of the state of Missouri is the "Brandywine Stone Wall." It has long been a problem that is yet unsolved. Some time ago, says the New Orleans Picayune, Thomas Watson, of Hazelhurst, sent Gov. Longino a pencil drawing of an immense pile of stone in the southeastern portion of Caiborne countys suggesting that the stone might be utilized in building the new capitol. In a letter which accompanied the drawing Mr. Watson stated that these stones, piled high on each other, cover an area four miles square. Each stone is six feet long, three feet wide and two feet thick, and they are joined together with an excelent quality of cement. No man knows how they came there. They may have been there for thousands of years. The builders, the Jackson News thinks, were some prehistoric race-it could not be otherwise. This structure is supposed to be a continuation of the great "Chinese wall," which seems to begin below Raymond, in the southern part of Hinds county, and which is traceable through Copiah. It is broad enough to accommodate two or three wagons abreast, and is one of the wonders of the world.

"Mention of this remarkable exhibit," says the Hazelton Courier, "has elicited no little comment-in fact, has brought a letter to Mr. Watson from the warden of the United States penitentiary at Leavenworth, Kan., and also a letter to Dr. T. B. Birdsong from another distinguished source, it being known that the latter some years ago investigated the matter. Mr. Waison, however," says the Courier, "has given the subject more patient thought than anyone else, and to him the Courier is indebted for the following interesting facts:

"He calls it the 'Brandywine Stone Wall,' and says this wonderful and massive structure or parts of structure of masonry done in stone, which has withstood the ravages of time for perhaps many thousands of years, still stands an enduring relic of a prehistoric civilization and a knowledge of the art of building not inferior in many respects to the present day. These stone buildings lie, for the most part, buried in the earth in the southeastern part of Claiborne county, and lying against the Copiah county line, on the slopes overlooking the valley of the Brandywine creek from the west

"These walls run from northeast to southwest. They are built of white or grayish white stone of immense size, weighing from two to three tons, measuring from six to eight feet in length and three feet wide by two feet thick. These blocks, or slabs, are laid a vory fine quality of coment, and as perfectly as brick work. The joints

are perfect and very close. "At one place the top of the wall is exposed by the earth being washed away to a width of 60 feet and a length of 90 feet; this exposure has the appearance of a brick hourth. At another place the stone has been quarried for domestic use to a depth of three layers of slabs, which is six feet, a width of 24, or eight blocks, and a length of 25 blocks, or 150 feet. The length of this wall as indicated by the eroppings is about 1,000 fact. At auother piace about 500 yards away from the place just mentioned is a wall jutting from under a slope for a distance of nearly 2,000 feet. This stone work is exposed in a great many places over

an area of four square miles. "The sides and angles of the blocks of stenes are so perfect that they resemble pressed brick. The tops of these walls are perfectly herisontal and without regard to the uneveness of the earth's surface. The seems across the tiers are perfectly horizontal in position, and these blocks are smoothly dressed on the edges and onds, while the broad surfaces are brought down to a level plane, but not dressed. They are held so firmly together by the sement that it is with great difficulty that they are broken up.

"A personal inspection of these great structures as they lie partly buried in the earth would relieve the minds of the most skeptical of all doubt of it not being the work of the hands of

"In all that is above mentioned in connection with numerous cavings in of the earth's surface, which represent the existence of underground oaverns, abundant evidence is found to bear out the theory of the existence of a great buried city in that locality.

"The information above given is vouched for by other parties who have visited the scene in recent years, and bears out the theory advanced by Mr. Watson. Truly, there is work for the scientist here."

Photographing Distant Objects. Recent improvements in telephoto cameras are said to have obviated the old difficulty which required long exposures, and have rendered it possible to take pictures with such cameras as quickly as with those of ordinary construction. The improvement has been effected by placing a tube, containing a positive lens at one end and a negative at the other, in front of the ordinary lens of the camera .- Youth's Com-

Accidents in Iron Mines.

During 1898 there were 226 accidents in 19 mines on the iron range in Minnesota, resulting in deaths averaging ! to every 193 employed. During 1899 there were 421 accidents, with the same average rate of fatalities. - Mining

BY UNKNOWN HANDS. WORK OF PATRIOTS.

Historic Spots in New York Preserved from Vandals.

Praiseworthy Efforts of a Society Organized for That Purpose-Some Notable Places Proteeted.

The Society for the Preservation of Scenic and Historic Places and Objects refers in its report to the New York legislature for 1900 to the efforts for the preservation of the Palisades. This noble work of creation (the Palisades), famous throughout the world, has of late years been the object of a commercial vandalism so exlensive as to threaten its serious impairment if permitted to continue," the report says. "The offenders have been the quarrymen, who have found these cliffs a profitable source from which to obtain material for paving questioned him about it. and crushed stone for roadmaking."

The report recites the appointment of the state commissions in New York and New Jersey to prepare the way for the establishment of an Interstate Palisades park, and the work of the commissions with its premise of ultimate success when a park shall extend from the beginning of the Palisdes at Fort Lee to their termination 131/2 miles up the Hudson river at Piermont, N. Y. The legislative bills in the two states, resulting from the commissions' work, the report saye, "taken together form the first definite and effective steps thus far New York Sun.

The society in its capacity of public trustee is now in custody of the state reservation of the battlefield of Stony Point, and it has in hand important plans for the rehabilitation larly the battlefield of Lake George. capture the animals .- N. Y. Sun. The Stony Point reservation is now placarded with signs of warning to trespassers, the work of the society, which employs a watchman to protect the state's property there.

The proposed reservation of Watkins Glen, the report says, can be made to yield an income of 21/2 per cent, on the purchase price within two years, and the society is persunded that within five years the income could be raised to five per cent. from hotel and other privileges.

The society is anxious that steps be taken, and has already done what it could to that end, for the preservation of the Philipse manor hall at Yonkers. The report says: "It is built of brick imported from Holland and is at the same time one of the state's most ancient buildings and one of its best preserved specimens of Dutch colonial architecture. It stands almost alone in representing in this country the feudal system, which dominated all Europe in the middle troubles were to be traced to the kidneys, isment of this colony. In the early | sing in kidney trouble. history of New York state there were in the lord of the manor the legislative, executive and judicial authority and converted the occupants of the and into his servants. These were by all druggists in fiftythe Philipse, Van Cortlandt and Van cent and one-dollar siz-Renselaer manors."

The society has lent its influence sample bottle by mail Home of Swamp look in New York city for the preserva- free, also pamphlet telling you how to fine tion of Fraunce's tayers, the Poe cottage and the Jumel mansion particularly, and has sought to prevent further loss of street names of historical interest in this city through the recurring efforts of the thoughtless to rename old thoroughfares here, as in the substitution of Park row for Chatham street. It has also sought to overcome the sentiment of similar character which every little while makes itself felt in villages and seeks to have their historic names changed. Among other matters to which the society has given its attention are the diversion of water from Niagara falls for commercial or drainage purposes and the methods of landscape gardening in Central park, of this city.

Too Belf-Confident. Mr. Bodkin, Q. C., tells the following anecdote of the late Mr. Francis Macdonagh., Q. C., who, says the Green Bag, was for upward of 40 years the

recognized leader of the Irish bar: "I remember once in the early glory of my wig and gown I got a case for an opinion. The solicitor thought it a very simple case, or he would not have sent it to me. I thought so, too. With the touching confidence of the neophyte, I took my pen and be

"'I am clearly of epinion.' "Now it happened that I sat in the law library beside the silver-haired silken nestor of the Irish bar, a leader of unfathomable astuteness. This elder chanced to glance over my

shoulder as I wrote. "'My dear young friend,' he said, softly-we were all his dear young friends-'never write that you are clearly of opinion on a law point. The most you can hope to discover is the preponderance of the doubt."

Remains of Ancient Man.

In some grottoes in Algeria French explorers recently discovered stone implements mingled with the remains of extinct animals belonging to quaternary times. Further explorations indicate that during the age when the grottoes were inhabited the coast of Algeria had a configuration different from that of to-day. Among the animals associated with the ancient haman inhabitants of Algeria were the

rhinoceros, the hippopotamus and various species of ruminants .- N. Y. Sun.

Sustaining His Theory.

No man is a real man of science unless he is ready to abandon his own conclusions, duly put on record, if subsequent investigations prove them fallacious. The president of a great college once wrote a volume on the practice of medicine. After it had been completed and he had gone to New York to arrange for its publication, his house was burned, and the manuscript of his book and all his notes were destroyed.

He couldn't reproduce it. Ten years afterward he said: "That fire was the greatest of good fortune to me. If I had published the book, I should have had to stand by it, whereas now I know that it was all wrong!"

Mr. Andrew Lang, in Longman's Magazine, tells of two geologists who were gathering specimens in a lonely mountain place. One of them had written a book. The other, looking about one day with a field glass, saw his friend occupied a long time-unobserved, as he thought-in rolling a great stone downhill, and at dinner

He pretended at first that he had been doing it for exercise, but, hard-

pressed, confessed: "Well, the fact is, the confounded thing was 200 feet too high to suit my

But nature is too big to be rearranged to suit anyone's theory—even our own.

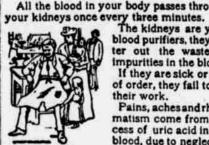

Locomotives for Rent.

Hundreds of locomotives are rented every year. Several corporations make their chief revenue this way. The Baldwins have many a machine out on the rental form of payment. That is, the engines are rented in the same jointly taken by the adjoining states way that you would buy a stove on infor the conservation of one of the stallments-so much down, so much a most beautiful and impressive scenic month, the payments to apply on the features of the Hudson," reports the final purchase money. It is seldom. however, that a railroad rents locomotives .- Engineering.
