Following these number of subject were taken up as per program and were ably discussed in an interesting and instructive manner. The subjects were: "What can be done to cause members of the church to regard their pledges to the church as sacred," "Is the preacher or the church members responsible for non-attendance at

Men of Oak

Timbers of oak keep the old homestead standing through the years. It pays to use the right stuff.

"Men of oak" are men in rugged health, men whose bodies are made of the soundest materials.

Childhood is the time to lay the foundation for a sturdy constitution that will last for years.

Scott's Emulsion is the right stuff.

Scott's Emulsion stimulates the growing powers of children, helps them build a firm foundation for a sturdy constitution.

New Use for Refined Paraffine Wax.
A new and important use for refined paraffine wax seems to have been discovered by a prominent resident of Ohio, living near Lancaster, who had two trees badly damaged by storm, one being a maple and the other an apple. In each case a large limb was broken down from the trunk, but still attached to it. The limbs were propped up and fastened securely with strips, very much as a broken leg might be fastened with splints, and then melted refined wax poured into and over all the cracks. The "surgical operation" was entirely successful. The Paraffine prevented the escape of the sap, kept out the rain and moisture which would have rotted the trees, prevented the depredations of insects, and the limbs seem thus far to be perfectly re-attached to the trees.

SNAKE RIVER PLAINS OF IDAHO.

In Bulletin No. 198 now in press. United States Geological Survey, Prof. Israel C. Russell discusses the geology and the water resources of the Snake River plains of southern Idaho. The main objects in view when the work was undertaken were to ascertain how far the geological conditions, particularly beneath the broad lava-floored plains bordering Snake river, favor the hope of obtaining flowing water by drilling wells, and where test wells should be put down in order to determine the correctness of inferences based on geological and other conditions. Of the 25,000 square miles of the region, about 1,300 square miles were examined, the main route lying eastward from near Boise across Elmore, Lincoln, and Blaine counties and into Bingham county as far as Blackfoot.
