NEBRASKA'S CORN CROP.

Union Pacific Gets Up Statistics of Acreage and Yield.

Omaha, Aug. 17.—Nebraska's corn crop promises to be big enough if it were all shipped to fill a train of 250,000 cars. The Union Pacific's crop estimate for 1906 is about completed, and will be ready to give to the public in a few days. The figures have been obtained by experts who have been through the grain producing counties of the state, visiting farmers and by conferring with the elevator men and others along the lines of the road.

In acreage they got these figures: Winter wheat has an increased acreage of 110,229 acres over last year; spring wheat, 56,631 acre decrease; corn, 385,419 acres increase, and oats, 22,144 acres increase. Winter wheat is estimated at from 18 to 30 bushels per acre; spring wheat, 11 to 20, and corn, 20 to 50.

The corn crop of the present year—most of which is considered safe unless there should be an early killing frost—is estimated at 250,000,000 bushels.
