## SEE THE NON-SKID TREADS ON NO-RIM-CUT TIRES

These are extra treads, made of very tough rubber, vulcanized on to the Goodyear tire. Thus a double-thick tread.

The extra tread consists of deep-cut blocks. They present to the road surface countless edges and angles.

Each block widens out at the base, so the strains are distributed, the same as on smooth-tread tires.

Come see how efficient, how enduring, is this Goodyear winter tread.
