

Train Control Devices Ordered on 49 Railroads

Safety Measures Demanded
by Interstate Commerce
Commission—Claim
Big Saving.

Washington, June 16.—Automatic control devices were ordered installed on specified divisions of 49 railroads, having annual revenue of \$25,000,000 or more, not later than January 1, 1925, by the Interstate Commerce commission yesterday. It is estimated that under the order about 5,000 miles of track will have to be equipped with some device to effect automatic train control.

Declaring that in the period, January 1, 1906, to December 31, 1921, there were 26,297 head-on and rear-end collisions resulting in death to 4,426 persons and injury to 60,682 persons, and \$40,969,663 damage to railroad property, the commission said automatic train control would effect great savings in money and life.

Roads Oppose Plan.
The railroads took the position that train control devices had not been developed sufficiently to warrant their being required to make a general test of them now and further that the cost of installation and maintenance was not within their present financial ability.

The commission said the cost of installing the devices depended on the nature of the particular installation and the type of device, and that therefore the cost per mile could not be stated.

Omaha Lines Named.
The order issued included the following railroads: Chicago and Northwestern, between Chicago and Omaha; Chicago, Burlington and Quincy, between Chicago and Omaha; Chicago, St. Paul, Minneapolis and Omaha, between Minneapolis and Omaha; Galveston, Harrisburg and San Antonio, between El Paso, Tex., and Houston, Tex.; Great Northern, between St. Paul, Minneapolis and Minot, N. D.; Kansas City Southern, between Kansas City and Texarkana, Tex.; Missouri Pacific, between St. Louis and Kansas City; Northern Pacific, between St. Paul and Mandan, N. D.; Oregon, Washington Railroad and Navigation company, between Portland and Pendleton, Ore.; St. Louis, San Francisco, between St. Louis and Springfield, Mo.; Southern Pacific, between Oakland and Sacramento, Cal.; Union Pacific, between Omaha and Cheyenne.

**Dr. George Meredith Dies
at Home of Daughter Here**
Dr. George W. Meredith died Thursday night at the home of his daughter, Mrs. T. H. Brice, 2448 Manderson street, after an illness of six weeks. He practiced medicine in Ashland for more than 35 years and for the last four was located in Lincoln.

He served two terms as representative and two terms as senator in the state legislature. He was married twice. Both wives preceded him in death.

He is survived by two sons, George E. of Oakland, Cal., and Dr. E. I. Meredith of Ogallala, Neb., and five daughters, Mrs. Brice and Mrs. E. H. Litchfield of Omaha, Mrs. Joseph Laughlin and Mrs. Ira Miller of Ashland, and Mrs. Al Gavin of Alliance, Neb.

Funeral services will be held Sunday afternoon at 3 from the Masonic temple at Ashland. Scottish Rite services will be held Saturday.

**Nude Mania Ramps Over
Des Moines Golf Course**
Des Moines, June 16.—(Special Telegram.)—The "honey man," the rival of all golfers or the bugbear of childhood, has been located in real life here.

Wednesday night a nude maniac, thought to be the same one which has terrorized numerous homes in the residential districts of Des Moines in the past few days, made his appearance at the exclusive Waveland Park Country club.

The crazy man romped along the fairway and across the greens in full view of the club members. He was not clothed. Patrons of the club gave chase. The man fled into a thicket. Police were called, but failed to find him.

**Newport Woman Slays Self
at Farm Home With Rifle**
Newport, Neb., June 16.—Mrs. Frank Martelle, 34, committed suicide at her farm home near Newport yesterday by shooting herself in the head with a rifle.

Both make money—the man who reads Bee Want Ads and the man who uses them. Are you taking advantage of the Want Ad opportunities?

RADIO

Entertainment in Home by Radio

Song, Music, News and Market Reports Brought Into Family Circles.

By JOHN KENNEBECK.
(This is the twelfth installment of The Bee's story of radio.)
Not long ago, radio was a plaything—a sort of hobby for the youth of America.

The ether was a vast concert hall and on clear nights was a bedlam of buzzing with numerous sparkling stations filling the air with the dot and dash.

With the development of the radio telephone, broadcasting stations have been erected throughout the United States and they have used the vast amphitheater of space to send forth music, news announcements, concerts and speeches that may be heard in any home equipped with antenna and receiving set.

If a person can operate a phonograph, he can operate a receiving set. It is simply a case of turning a knob of a running coil and listening to the music or news as it comes in. Radio amateurs may wonder at the source of the concerts et alia. That is ably being cared for in any city having a broadcasting station as it is attended to in Omaha.

The Bee's concerts from the Omaha Grain Exchange station, WAAW, entertained thousands of radio fans throughout the middle west at least once a week.

Five time every day, the Omaha Grain Exchange station broadcasts the latest grain and livestock market reports, while every night this station fills the ether for hundreds of miles around with music and entertainment that might cheer mother and daddy, sister and brother.

Ranchers out on the prairies, who have audio bulb receiving sets may listen in on the programs as they are sent out from powerful broadcasting stations.

Weather reports are broadcast also from the grain exchange station. Sermons are becoming common over the radio, so that the typical preacher has literally become a "sky pilot" after all.

What the future holds for radio in the home is a matter of conjecture. What radio means to the farmer and rancher will be taken up in these columns of The Bee tomorrow.

Static Still a Bother.
However, static, the old enemy of wires and wireless both, is giving radio operators lots of trouble these days. The radio section of the bureau of standards is being flooded with inquiries as to what to do about it. Echo answers "what," for the inventor who finds a way of nullifying it will make a fortune.

Static is atmospheric disturbance caused usually by a heated atmosphere, dust storms, the aurora borealis, or northern lights, rain, snow and other disturbances which have caused trouble to half-hearted novices.

SPARKS
The bureau of standards says that a properly erected radio set acts as a lightning rod and protects the building where it is housed. Says the bureau:
When the antenna and the connection to the ground are properly made, and the lightning switch is closed, the antenna acts as a lightning rod and is a protector to the building.
If O. Henry's gentle grafter were operating today he would discard the lightning rod as having outlived its usefulness and he would be selling trick radio sets. But for radio to relegate the lightning rod to the limbo of the ancient would be kicking off the rungs by which it has ascended the ladder of success. The lightning rod was the father of the antenna.
A "white elephant" can be turned into cash quickest by advertising it for sale in The Bee Want Ads.

Omaha-Made Plane Is Winner in Two Events

Monmouth, Ill., June 16.—The marriage in the clouds yesterday of Miss Alice Tinder and Charles O'Mara marked the opening of the Midwest flying meet. Rev. G. O. Miller of the Seaton Presbyterian church performed the ceremony. Two witnesses also made the flight while thousands of persons on the ground looked on.

The Ballanca plane, made in Omaha and piloted by Harry G. Smith, Omaha air mail flyer, won two main events, reaching an altitude of 6,500 feet and returning to earth in 15 minutes, and also capturing the 15-mile race. Jimmy Curran of Chicago won the altitude contest at 19,000 feet.

Twenty planes took part in yesterday's program. Today the feature will be a gliding contest, while Saturday the aviators will be turned loose to go the limit in stunt flying.
