

### McAdoo Attacks Esch-Cummins Act as Rate-Raiser

Declares if Tariff Bill Passes There Will Be No Need for a Merchant Marine.

Reno, Nev., June 28.—Introduced by Governor E. D. Boyle of Nevada as a man "not seeking public office, and not a political candidate, potential or otherwise," William Gibbs McAdoo, former secretary of the treasury and war-time director-general of railroads, addressed a Reno audience last night on the tariff, the four-power treaty and "shirt-tail" diplomacy.

He attended the state democratic convention here, where he made a short address, discussing mainly the need for party organization and praising the efforts of Senator Pittman of Nevada for progressive legislation.

"Democrats have the most votes as a rule," Mr. McAdoo told the delegates, "but the republicans excel in getting the votes out."

The Esch-Cummins act was severely criticized in the former cabinet officer's afternoon speech. He referred to the act as "the bill which put rates up and wages down."

The ship subsidy bill also was brought up by Mr. McAdoo, who said that with a tariff such as now planned there would be no need for a merchant marine because there would be no ocean-going trade for it to carry.

The former secretary of the treasury said promises of the administration for soldier bonus legislation have not been carried out and that postponement of action on the measure until after tariff discussion was completed means an interminable delay.

### Fine Screw May Be Used on Crystal

Carborundum Gives Good Results With Slight Pressure of Contact Wire.

Various kinds of detectors require different kinds of contacts. With galena, satisfactory results are obtained only with a light contact made by a fine wire, perhaps No. 30 or smaller, which makes contact with only a very small surface. Iron pyrites and molybdenite usually give best results with a fine wire, but can be used with larger points.

Silicon can be used with a fine wire contact, but will also give good results in contact with the end of a small machine screw under considerable pressure. The screw is usually tapered to a blue point. Iron pyrites is sometimes used in contact with the tapered point of a screw under pressure. Carborundum gives best results with a contact of appreciable area under considerable pressure, providing this contact is made with the most sensitive spots, which may be deep in the mass of crystals in a specimen.

**Screw in Carborundum.**  
For service in the field or on shipboard, where it is necessary to have rugged instruments which require very little adjustment, silicon or carborundum, in contact under considerable pressure with the blue point of a screw, are therefore most desirable. With silicon and carborundum the same contact may be used for a considerable time. For permanent land stations, where new crystals are easily available and new adjustments can be easily made, the more sensitive galena crystals are preferable.

It is usually necessary to examine a considerable number of specimens of any of these minerals before a crystal is found which is sensitive as a detector. The three most widely used contact detectors are probably galena, iron pyrites and silicon. Pieces of metallic silicon are usually sensitive. Sensitive specimens of galena are obtained only by a careful selection, and sensitive iron pyrites is still harder to find. Good specimens of galena and iron pyrites are usually the most sensitive detectors. Sensitive specimens of molybdenite are much more easily found, but molybdenite is usually much less sensitive than galena or iron pyrites.

### Radio Sets Sell Low in England, Report

London, June 28.—British government officials are giving close study to American methods of wireless broadcasting and gradually are adopting some of them. While the wireless telephone is not as popular in England as in the United States, due largely to government licensing and control, the people are beginning to show intense interest in it. Some of the big London department stores have established wireless departments and are selling receiving sets for as low as \$10. Radio terminals are rigged up on their roofs, and crowds of shoppers are entertained each day with wireless concerts, speeches and weather reports. Direct communication with Arlington and other American stations is easily established.

Nothing written on the subject of wireless broadcasting has brought it home to England so vividly as a recent New York dispatch to the London Times. "In the United States," says the correspondent, "there are already half a million home-made receiving sets for listening-in and 1,000,000 manufactured sets have been sold." "By the purchase of the simple and inexpensive receiving sets as used in America," continues the writer, "there is no village in the British Isles so poor or so unfriendly that it will not be able to afford, or find a patron to give, the necessary receiving instrument. The villager and every remote farmhouse should receive every night as good singing, as good opera, as good dance music, as good a lecture, or as good a survey of the news as any millionaire in London can buy."

In answer to a published statement that wireless broadcasting of concerts would hurt the musical

and theatrical industries, Louis Sterling, president of a large American phonograph company, has said that in the march of science there never yet was a great invention that had not been of incalculable benefit both to the industry with which it was immediately concerned and to kindred industries.

### Sparks

A survey of the radio industry in Omaha shows that dealers are able to make immediate deliveries on wireless equipment. Shops are stocking up also for expected rush business again this fall.

Since Maj. Gen. Squier announced his method of operating a wireless set through a lamp socket fuse manufacturers have reported a remarkable boom in their business. Operation by the new method requires a lot of experimental work—and a lot of fuses.

**Cortland Doughboy Home**  
Beatrice, June 28.—(Special).—Herman Miltenberger, who has been with Uncle Sam's troops in Germany the last few years, has returned to his home at Cortland, this county. He went overseas at the outbreak of the war with Germany.

### Body of Rathenau Lies on Rostrum Used for Bismarck

Leader of German Republic First Man in Three Decades to Be Honored as Was Maker of Monarchy—Mourning Mother Sits in Chair Once Used by Kaiser—Nationalists Boycott Services.

BY GEORGE SELDES.

Berlin, June 28.—Where 30 years ago the body of the proud Prince Bismarck, the maker of the German monarchy, lay in state on the rostrum of the reichstag yesterday the body of Dr. Walter Rathenau, the first leader of the German republic, received the same honors. In these three decades no other man has been so honored.

Under the stained glass roof of the reichstag everything was dark and dismal. The rain fell. The members of the German congress and the Prussian diet sat in silence, all garbed in black. Color was there in great embankments of pale hydrangeas, roses and orchids, and the gold, red and black service flag of the republic over the walnut coffin.

In the seat the former kaiser once occupied sat an old woman in deep mourning, with bowed head, restless and weeping. It was the mother of the murdered foreign minister, sharply and sadly outlined against the red brocade chair. Nearby in the diplomatic gallery, resplendent with gorgeous uniforms, medals and swords, in sharp contrast with the plain black attire of the American ambassador.

Black streamers hung everywhere. One fact stood out in strong gruesome clearness—that the nationalist party, the party which stands for the monarchy and which was openly accused in the reichstag of protecting and financing the assassins' organizations, boycotted the funeral services. Karl Helfferich, their leader, was absent. Only three representa-

tives were sent, and these as listening posts, to report to the party how strong the feeling was running against the monarchy. A half million persons attended a Rathenau demonstration in the Lustgarten before the former kaiser's palace yesterday afternoon. On account of the street car traffic being stopped, crowds overfilled a suburban train, hundreds remaining on the running boards. Then a train, with an open side door, passed the first train, sweeping the passengers off the running board, killing 15 and wounding 100.

Potter Lodge of Masons.

No. 313 Receives Charter

Potter, Neb., June 28.—(Special Telegram)—Potter lodge No. 313, Ancient Free and Accepted Masons, was fully constituted Tuesday night, having received its charter from Worshipful Grand Master Wellman of Omaha, Grand Chaplain Shepperd of Lincoln and Grand Custodian "Bob" French of Kearney.

Among the speakers were Martin Dimery and Judge Joseph Oberfelder. A splendid banquet was served. Delegations were present from Sidney, Kimball, Lodgepole, Chappell, Gering and Scottsbluff. The installation of officers was public and many women were present.
