PHILIPPINE SMALLPOX.

Several months ago the country was flooded by statements relative to smallpox in the Philippine Islands. Extreme charges were made, not only that vaccination had proved a failure as a protection against smallpox in these islands, but from that it was argued that vaccination should be abandoned in this country.

Those making the charge and recommendation had no substitute plan to offer. If the anti-vaccinationists have ever offered any plan for the control of smallpox, or if any anti-vaccinationist has ever made use of any other plan to control smallpox, I have never heard of it.

These statements, after quoting from published statements, some of which were official, as to the presence and virulence of smallpox, proceeded to add statements and conclusions which were not drawn from official and other publications.

It was difficult to get at the truth of the statements other than those published in official and reputable publications, because most of the people with knowledge of the facts were in the Philippines.

After some months the United States public health service, having gotten together the facts, published them. The proper conclusion from the facts, as well as certain basic facts, were directly contradictory to the statements made by the opponents of vaccination.

By May of this year, the misleading, untrue and deceptive statements made by these people, had reached the attention of Gen. Leonard Wood, the governor stationed at Manila.

Prior to the American occupation, smallpox was not known in the islands. When we took charge, a fearful epidemic of this disease was raging. Our army threw in a corps of vaccinators, vaccinating everybody in the fact in which the disease was prevailing, and ended the epidemic.

Since about 1906, there has been but little vaccinating done among the Filipinos. To serve the 11,000,000 people, many of whom are savages living in remote islands, there are 1,100 trained nurses and 1,200 physicians.

By 1918 a large proportion of the population was protected from smallpox neither by vaccination nor by having had an attack of the disease. Smallpox became prevalent. Many thousands people had it.

By 1919 the disease was ending, under control. In 1920 there were only five cases in Manila and in 1921 there were none.

So much for the chronology of the outbreak.

Now for the facts as to the relation of vaccination to smallpox, as they are given by Governor Wood.

Investigation shows that there had been practically no effective vaccination done since 1913. A large part of the wilder, outlying population and practically all of the child population were unvaccinated, and of the adults vaccinated, most had not been successfully vaccinated for something like 20 years. Ninety per cent of the deaths occurred in children born since 1913. Of 389 deaths in Manila, all but 100 were children under 10 years of age. Of 1,826 cases of smallpox at the hospital, only 176 had ever been vaccinated, and most of those had not been vaccinated for many years.

In 1919 the policy of vaccination was resumed thoroughly, whereupon the disease came under control.

Gov. Wood said that the real facts are directly opposed to the statements made in the anti-vaccinationist circulars. He says: "Instead of there being any doubt as to the value of vaccination against smallpox, its efficacy has been doubly confirmed."

Childbirth at 37.

T. A. G. writes: "Is it dangerous for a woman 37 years old to bear a child, having been married a few years, and what would the danger be?"

REPLY: The danger of childbirth under these circumstances is increased about 10 per cent.

Fruit is Not Fattening.

J. E. O. writes: "I. Is fresh fruit fattening, if one eats about five or six peaches and one or two oranges through the day?"

REPLY: "2. I would like your opinion of whole wheat bread. Is that fattening?"

1. No.
2. Yes.
She Has Enlarged Spleen.

L. T. Z. writes: "What is the cause of an enlarged spleen in a woman 48 years old? Is there any cure?"

"She has never been in malarial districts."

REPLY: It may be due to leukemia. If so, there is not much hope of permanent cure.

A thorough examination would show the cause and would point the treatment and the prognosis.

- I Cannot Sing the Old Song. (Claribel) All Through the Night. Soprano Solos. Margaret Romaine. A-3704 \$1.00

Know Tootsie's Love-Tutor?

BET a hat you'll guess it before we say, "Al Jolson!" Who else could it be; who else could take Tootsie a tooting up and down Lovelane like Al, old boy? All the girls know Al!

A la Jolson, you call "Too, Too, Tootsie," for it's a peach from the garden of love! Al makes it quite sad for every one when he bids Tootsie a fond farewell—yes, to be exact, seven continuous and consecutive farewells. Then, with a breezy "Too, Too, Tootsie, Goo' Bye," he hops a choo-choo and hies himself hence.

On the other side of this record, there's old friend Frank Crumit awaiting a turn with "True Blue Sam"—the tale of the traveling man! Here's a scream, all right, for it tells how Sam blew into Honolulu. There he saw a South Sea Sadie shaking her shredded wheat. That settled it! What happened next—well, you want to hear it! What's the use of taking the kick out of the situation! Both songs on 10-inch Record A-3705, for 75c.

But these are just samples picked from the new Columbia program that's out to-day. They're all equally good. And they're all made by the new three-ply, laminated process—an exclusive Columbia feature which gives Columbia Records a playing surface of velvet-smoothness that does away with disconcerting surface sounds.
