

The Omaha Poultry Association Exhibition Opens Today

NEW POULTRY BOOK

Mr. Lee is author of a score of books on poultry, having a distribution of more than TWENTY MILLION copies. He considers, as best of all, his latest book, "POULTRY TROUBLES". There are climatic troubles; seasonal troubles; neighborhood troubles; epidemics; accidents; vermin; housing and feeding troubles—their PREVENTION and TREATMENT all told in the plain, easily understood, common-sense way for which Mr. Lee's writings are famous. It's worth reading. A copy may be had FREE from any dealer handling Lee's Lice Killer and Germicide, or from GEO. H. LEE CO., 1115 Harney St., Omaha, Neb.

Poultry Exhibit Opens Today at City Auditorium

Only Free Show of Its Kind in Country—Experts Will Attend and Lecture on Flocks.

Every day of the annual show of the Omaha Poultry Association, which is to be held at the Auditorium, starting today and continuing until December 2, there will be an educational program conducted by men nationally known in the poultry breeding world, according to Harry Knudsen, secretary. The show is the only free poultry exposition in the United States and is made possible by the Chamber of Commerce, which has backed it for three years.

During the exposition there will be lectures and talks by professors of poultry husbandry of the University of Nebraska. These experts will have exhibits to illustrate their talks. The programs will be carried out each afternoon and evening.

Dr. Kent to Lecture. Dr. Kent, formerly of Cornell university, Ithaca, N. Y., a world authority on poultry breeding, also will give a series of lectures and talks. He also will answer any questions pertaining to poultry breeding asked by visitors or exhibitors, according to Secretary Knudsen. Exhibits at the show are expected

Feeding Mash Is Only Solution to Egg Problems

Investigation by Experts Show Reason for Falling Off in Production Is Absence of Soft Feed.

By ALBERT ANZELL, Jr.
It has taken many years experimenting with poultry to arrive at just what consists of the proper egg-making material necessary to enable the hen to shell out eggs in large numbers—hatchable eggs at that. We learned much from watching the hen while on free range, balancing her own ration. We noticed that she laid freely in the spring of the year, when the green stuff—worms and insects were a plenty.

Then as the months pass and the changing of the seasons take place, the green grass, worms and insects all gone, Biddy soon stopped laying. In fact, she stopped for the winter when the moulting season came on. In the management of laying stock to produce the greatest possible egg yields we learned that it was necessary to supply the hen with all the material she picked up herself in the spring and summer if we were to have eggs when wanted. This material was all soft food—green stuff, such as grass, and almost every sort of vegetable; in fact almost anything green the hen would relish—then bugs and worms were the animal food. This soft feed was consumed every day and all day. The hen never getting too fat on it. It was turned into eggs—rapidly—because it was soft, easily assimilated—in fact, predigested. The more she consumed the better she laid—and she had to consume great quantities to lay an egg every day or five eggs a week—because it was the only food that would make eggs.

High Class Roosters to Be Sold at Auction

Auction sales of hundreds of high-class roosters from accredited flocks in Nebraska will be on in many counties of the state this month and in December, according to poultry experts at the state poultry show. The birds to be sold represent the best results of the breeding work in the accredited farm flocks project. Specialists at the state university agricultural school claim that there will be valuable additions to Nebraska poultry flocks. One specialist has this to say regarding the sales: "People have been buying roosters these many years. They now will have the opportunity to purchase high-class males and announce to the world that 'only pure bred poultry sires are kept on this farm.'"

Nebraska Sheep Are Stricken by Rare Disease

Sarpy County Flock Found to Have Coccidiosis—Federal Doctors Are Watching Situation.

A disease of sheep never before reported in Nebraska and very rare in this country was discovered a few days ago on a farm in Sarpy county. The owner of the affected flock had lost about 200 head, when Dr. C. H. Hays of Lincoln and Dr. H. T. D. Lackie, connected with the federal bureau of animal industry visited the farm. An examination of the diseased body parts by Dr. G. B. Morse of the federal meat inspection bureau of South Omaha confirmed their belief that this disease was coccidiosis. Relative to this disease in sheep, Dr. Morse says: "The disease was first discovered in 1892 by Dr. Stiles of the bureau of animal industry at Washington. Ten years later it was discovered in Europe and is probably much more prevalent in European countries than in this country. In Europe, it is found in valleys of the Swiss Alps and also in certain parts in Germany and Hungary. It seems to thrive in more or less damp or wet places and in the Swiss Alps it was known that transferring the sheep to higher elevations was a good control measure."
Dr. H. T. D. Lackie states that there are several forms of this disease, one being the cause of a form of fowl cholera and another affecting calves. In sheep it causes a very serious dysentery, rapid loss of flesh and when it once invades a flock, large losses usually follow. It is not a bacterial disease but is propagated by means of spores. Animals become infected throughout the contamination of water or food by diseased animals. An examination of the intestines of diseased animals shows a spotting of the intestines, the spots being white and varying in size from a pin point to a pin head.
Dr. Lackie states that the control of the disease is best accomplished by moving sheep to a new quarter and cleaning up the infected quarters. As to whether this disease of sheep will become widespread in the state is rather difficult to determine, as relatively little is known about the disease in this country. This outbreak is being closely studied and because of its rarity, it is attracting considerable interest.

Beatrice Poultry Show to Start December 11

Beatrice, Neb., Nov. 26.—(Special.)—The annual exhibition of the Beatrice Poultry association will be held here December 11-15. A. D. Modlin has been selected as judge. The premium list which is now being printed will be distributed within the next few days, and the merchants are offering prizes for the highest scoring birds. Entries close December 7. The officers of the association are: S. A. Seymour, president; C. E. Shower, vice president; and David O. Kassing, secretary-treasurer.

Custer County Will Build Machine Shop for Repairs

Broken Bow, Neb., Nov. 26.—(Special.)—The county board of supervisors will establish a county machine shop in or near Broken Bow for the purpose of doing all the repair work on the county trucks and other machinery belonging to the county. The work on the new project will start at once.

Farmer Sells Personal Property for \$8,000 Cash

Beatrice, Neb., Nov. 26.—(Special.)—Henry Heiger held a farm sale at his home near Plymouth, disposing of \$8,000 in personal property, most of the sales being spot cash. One horse sold for \$225, another for \$200, and a team of mares for \$320. Farm machinery went accordingly.

A New Knowledge of Animal Nutrition

Every poultry raiser should be encouraged to use these feeds.

Helping Poultrymen Get Started

is our business. We believe more acreage tracts have been sold by us to buyers who intend to raise poultry on a large scale or just to help out the family income than any other firm in Omaha.

Our latest acreage tract appealing to poultry men is West Benson. Here you can get a "man's size" piece of land right in Omaha. You will have room enough for the kiddies, and plenty to raise chickens. Berries do fine; a bunch of rabbits will cut down the meat bill. Then there's money in squabs, fruit trees and vegetables. You can have all of this on this rich, level, stone-free soil. And

\$25 Down Starts You \$10 Per Month
