NEWS OF INTEREST TO NEBRASKA AND IOWA FARMERS

Barberry Drive in State Will Be **Ended This Year**

Funds Available to Complete Eradication of Bushes Blamed for Rust in Nebraska Grain.

By Associated Press. Lincoln, May 6.-Nebraska will receive \$22,500, available July 1, for the continuation of the farm-to-farm search for common barberry bushes this season, according to A. F. Thiel, state leader of the federal barberry eradication forces, on his return from the annual conference of barberry eradication workers held at Urbana,

Later this sum will be supplemented, if necessary, by enough to assure the completiion of the original survey in Nebraska, Mr. Thiel was assured. The United States Department of Agriculture has \$125,000 for distribu tion to states, in addition to their original apportionment, to match appropriations that may be made by the individaul states or raised within the

No State Assistance. The Nebraska legislature has made no appropriation, but if additional funds are needed, they may be obtained from amounts set aside to match money raised by the conference for the prevention of grain rust, an organization representing the business and agricultural interests of the spring wheat states.

Experts at the Urbana meeting agreed, Mr. Thiel said, that the goal of the campaign was in sight in the states west of the Mississippi river. The eastern states reported that rust loses already had been reduced in many areas by the removal of barber-

New System Planned. A feature of the work this year will be a new system of eradication to be put in force by state and federal eradication workers. Heretofore, the barberry bushes have been pointed out to the farmers, and the work of digging up the bushes left for each farmer to do for himself. This year the men on the eradication force will remain on the ground until the bushes have been dug up and destroyed. either attending to the work themselves or remaining until the farmer or some of his men has destroyed the pest pointed out to him.

This system, it was declared, has proven most valuable in states where the barberry has been found, and asthe place only once. Under the former system, in which the farmer was left to dig up the bushes himself, many failed to do the work, putting it off from time to time. Therefore the new system was adopted.

Personal Hygeine Course
