

Kearney, Neb., Sept. 23.—At last the romantic possibilities of Nebraska history have been realized by the motion picture industry.

Famous Players-Lasky is to produce "The Long Trail," said to be the last story Emerson Hough wrote. The manuscript was found after the author's death, written in pencil on yellow paper.

He found the site of the fort empty and belonging to an estate, of which a Minden man is administrator. He also learned that the old pontoon bridge is in existence at present, but is being used as a fence.

The government was able to give the company the specifications of the fort, but had no picture of it. The representative, elated by his finds, led to report to the company. He promised to return, however, and take up the search for a picture of the old fort and to talk to old settlers who remember outstanding features of the building.

Negroes Flock to Iowa Cities Colored Population in State Gains One-Third in Five Years.

Des Moines, Ia., Sept. 23.—The negro population of Iowa has been increased by one-third since the end of the world war, by the negro exodus from southern states, according to S. Joe Brown, negro attorney of Des Moines, and widely known through his efforts to better the condition of his race.

Most of the immigrant negroes, it is said, are farm workers or small farm owners in the south, and are leaving their acreages to come to the cities of the north much as rural dwellers of the north flocked to cities during and after the world war.

Iowa will eventually feel a greater effect of the negro migration, negro leaders here believe, when the reaction from migration to the cities sets in, and the negroes begin to leave the centers of population, where many of them have found temporary employment in industrial plants.

Sheridan County Potato Crop Averages \$50 an Acre

Gordon, Neb., Sept. 23.—Several cars of the Sheridan county potato crop, shipped recently, caused a net of \$40 an acre for the shippers. The cars were shipped at 50 cents a bushel, field run. It is expected that the average potato yield will be about \$50 an acre.

Farmers' Union Notes

A. C. Davis, Springfield, Mo., secretary of the National Farmers union, will make a two-day speaking tour in Nebraska beginning Monday, October 1. President J. O. Johnson of the Nebraska Farmers' Union has announced.

Grand Island—A resolution condemning the "poisoning of history" by foreign propaganda was adopted by the convention of the Grand County Farmers union held at Grand Island, Neb., Sept. 22.

Spencer—Sales of grain, coal and warehouse commodities by the Farmers Union cooperative association here in the first eight months of this year totaled \$44,477.49, and hog sales amounted to \$129,447.49, making a total volume of \$173,924.98.

Home—Farmers near here attended the annual convention of the Farmers Union of Nebraska at the home of Mrs. J. H. Hart, Hoskins, and Sam Jenkins, Winnebago, respectively of the county organizations.

Lincoln—Following discussions relative to the possibility of a local tuberculosis eradication service has been announced that one of the extension agents will be a full time extension agent for the county.

Lincoln—Following discussions relative to the possibility of a local tuberculosis eradication service has been announced that one of the extension agents will be a full time extension agent for the county.

H. C. Willett Dairy Farm in Iowa Is a Model of Practice and Theory Equipped With Every Modern Improvement, and Results Are Shown in Remarkable Success Achieved by Owner.

By ROBERT WORTHINGTON DAVIS. The Springfield dairy farm, midway between Woodbine and Logan, Harrison county, Iowa, the property of H. C. Willett, is representative of the practical embodied with the theoretical. Mr. Willett received his training at Syracuse university and in New York.

He owns an accredited herd, chiefly Guernseys, which he finds to measure up best for quality as well as quantity. And he has had sufficient experience with various breeds of cattle to know that he is talking about it.

In relation to and in direct harmony with the outstanding sagacity of his choosing, lies the natural advantages of his farm. A portion of it includes a rough stretch of country which affords excellent pasture, and is being used as a fence.

But pasture needs rest. Mr. Willett avers, and he is prepared to meet this necessity. There are certain months during the year when lowland pasture is ideal, depending upon the season, and it is in such times that his herd grazes upon some 15 acres in the valley bordering on the river.

Alfalfa has long passed the experimental stage, and has been found to contain food elements best suited for milk cows. Mr. Willett grows 20 acres from which the usual three crops are taken annually to meet his winter requirements.

Findings Hogs Profitable. The introduction of hog raising on a dairy farm is, perhaps, unwise, but well worth observing from the practical viewpoint. Mr. Willett does not permit this to attain such proportions as to interfere with his dairy work, but he says that the most who raise pigs and fattening them is trivial, and the remuneration received is practically all profit.

Uses Milking Machines. Some criticism is usually evoked concerning the practical merit of milking machines, but Mr. Willett has found them to be reliable. One can not depend, he states, upon the "hired man" to milk cows. In other parts of the country where dairying is more common the problem is insignificant, but in the midwest the secret of keeping milk sweet for the longest possible period lies in the time and manner in which it is cooled.

More Than 1,000 Cattle Sold by Norfolk Stockman. Norfolk, Neb., Sept. 23.—A sale of more than 1,000 cattle brought to the local livestock market by cattle producers of Cherry county was held recently.

Uses Milking Machines. Some criticism is usually evoked concerning the practical merit of milking machines, but Mr. Willett has found them to be reliable. One can not depend, he states, upon the "hired man" to milk cows. In other parts of the country where dairying is more common the problem is insignificant, but in the midwest the secret of keeping milk sweet for the longest possible period lies in the time and manner in which it is cooled.

The Omaha Bee: Monday, September 24, 1923. The Business Barometer This Week's Outlook in Commerce, Finance, Agriculture and Industry Based on Current Developments.

By THEODORE H. PRICE. Copyright, 1923. Editor Commerce and Finance, New York. When in the past Tuesday and Wednesday every business man that I met asked the same question: "What is the outlook for the future?"

They were all busy and optimistic, but having been taught that the action of the stock market is the best indicator of the future, they were at a loss to understand its persistent lethargy. That the tone of the New York Stock Exchange is no longer as optimistic as it was a few months ago is a fact which is not in dispute.

Logic suggests the reverse and the movement of the market is in the direction of a recovery. The market is now in a position to make a recovery, and the movement of the market is in the direction of a recovery. The market is now in a position to make a recovery, and the movement of the market is in the direction of a recovery.

Prices Are Improving. For reasons already mentioned of them, cotton, sugar and coffee are all strong and higher. Even copper and leather are showing signs of recovery.

Speculators Quit. As to the larger capitalists the very opposite is true. They are not buying or unmaking value on the stock exchange.

Pure-Bred Stock Is Emphasized. In the improvement of livestock, a movement which is being accelerated by the state agricultural college and the United States Department of Agriculture through the better sires, better stock campaign, the sire exerts the greater influence, but, once the grading up process has been started, the importance of the sire is recognized.

Root Crops Taking Place of Ensilage. In the improvement of livestock, a movement which is being accelerated by the state agricultural college and the United States Department of Agriculture through the better sires, better stock campaign, the sire exerts the greater influence, but, once the grading up process has been started, the importance of the sire is recognized.

Findings Hogs Profitable. The introduction of hog raising on a dairy farm is, perhaps, unwise, but well worth observing from the practical viewpoint.
