

Death of Corn Pickers Is Blow to Bumper Crop

Huskers Paid 6-Cent Average in State—Able to Supply Only Tenth of Hands Needed.

Lincoln, Oct. 28.—Husking of Nebraska's corn crop, which has previously been estimated at about 255,000,000 bushels, or the second largest in the state's history, has been started in nearly all parts of the state during the week just past.

Mr. Boles stated his office had been able to supply only about 10 per cent of the demand for cornhuskers so far, and that he saw no means of improving this situation in the near future.

Mr. Boles declared that the shortage was the price of a bumper crop. He said that the price of corn husking was about 6 cents per bushel—the average wage offered by the farmers.

But as a general rule farmers pay by the bushel and not with a percentage of the market price as a wage basis.

Reports coming to this office indicate the Nebraska crops are generally in good shape, with little if any down and most crops large and of good quality.

Mr. Boles said that the shortage of huskers is due to the fact that the price of husking is only about 6 cents per bushel, which is not enough to attract many men to the work.

Farmer Finds Bones of Indian Victim

Plainsview, Neb., Oct. 28.—H. W. Hopkins, farmer near Neligh, while plowing in his field, unearthed a bone human leg which so excited his curiosity that he got a spade, and after a little digging found the skull and nearly all the other bones of the body.

It was thought that the bones were those of a person who had been buried in the shallow grave at least 50 years ago. The skull had a hole two inches long on the top, which indicated that the person probably had been killed with a tomahawk by Indians.

Mr. Hopkins says that this is the fourth skeleton he has uncovered on his farm during the last few days and all were in shallow graves.

Annual Meeting of Feeders at Lincoln, Oct. 30

Summer and Winter Feeding of Cattle and Hogs to Be Demonstrated.

Lincoln, Oct. 28.—The annual feeders' meeting, which is held each fall at the Nebraska University Agricultural college here, has been called for October 30. Prof. H. J. Granlich, chairman of the animal husbandry department of the college, announced. The animal husbandry department has arranged for a program of out-of-town and local speakers and is preparing for a large attendance.

The summer experiments in cattle and hog feeding will close just prior to the meeting, it was said at the college and results of these tests will be available to those attending the meeting.

Winter experiments in cattle, hogs and sheep feeding are scheduled to start during this week and immediately after the meeting Prof. Granlich announced.

In announcing the meeting, Prof. Granlich said that the purpose of the meeting is to give the feeders a chance to see the results of an experiment in summer cattle feeding, in which one lot was fed shelled corn and alfalfa hay in a dry lot, one lot received shelled corn and alfalfa hay in a pasture, and one lot got shelled corn and alfalfa pasture.

Another feeding comparison of calves, yearlings, 2-year-olds and 3-year-olds, similar to the ones run at the college during the winter, will be conducted this winter. A hog-feeding experiment to be run this winter will test the comparative feeding values of white and yellow corn and alfalfa and tankage.

Mr. Granlich said that the purpose of the meeting is to give the feeders a chance to see the results of an experiment in summer cattle feeding, in which one lot was fed shelled corn and alfalfa hay in a dry lot, one lot received shelled corn and alfalfa hay in a pasture, and one lot got shelled corn and alfalfa pasture.

The Business Barometer

This Week's Outlook in Commerce, Finance, Agriculture and Industry Based on Current Developments.

By R. G. DUN & CO. Some new signs of increased demand have appeared but there is no general gain. A conservative feeling is reflected in the market for lumber, which is needed chiefly, and in some lines, as in pig iron, textiles and leather, production is not large enough to maintain production. There is still a high rate of manufacturing, but the rate of production is not large enough to maintain production.

The price changes recorded are neither important nor significant. What is an important factor is the fact that the price of cotton has advanced and the price of wool has advanced. The price of cotton has advanced and the price of wool has advanced.

Business on Even Keel. As to money, there is nothing to report. The market for money is on an even keel. The market for money is on an even keel.

Trade Review. Figures are for last week, the previous week and last year. The market for trade is on an even keel. The market for trade is on an even keel.

Wholesale prices of beef cuts effective from Oct. 29 to Oct. 30, 1923. The market for wholesale prices of beef cuts is on an even keel. The market for wholesale prices of beef cuts is on an even keel.

Bank Clearings. Bank clearings in the United States for the week ending Oct. 26, 1923, were \$1,234,000,000, or 1.2 per cent above the same week last year. The market for bank clearings is on an even keel. The market for bank clearings is on an even keel.

Food Index Lower. Bradstreet's Food Index number, based on the wholesale prices per pound of 31 articles, was 112.2 last week and 112.1 the week ending Oct. 26. The market for food index is on an even keel. The market for food index is on an even keel.

Two splendid Wabash trains leave Chicago—Dearborn Station—daily for Detroit at 10:30 A. M. and 11:25 P. M. The market for Wabash trains is on an even keel. The market for Wabash trains is on an even keel.

All-steel equipment, a smooth track, courteous employes and good meals in dining cars make these two fine trains models of comfort, safety and convenience. The market for all-steel equipment is on an even keel. The market for all-steel equipment is on an even keel.
