The Paper Doll that Sets the Styles

## Mother and Her New Clothes

"REALLY, I just know that I shouldn't have paid so much for this dress and wrap," said Fashion Fanny's mother to herself as she turned round and round in front of the tall pier glass. "But I'm so tired of buying clothes for Peggy and Fashion Fanny that I thought I'd see how it felt to buy some new things for myself."

She looked at her new evening dress of green and gold chenille brocaded georgette. "It's just what I'll need when we go to New York for grand opera this winter. And this wrap is so pretty, too." She touched the soft fur which trimmed it and noticed the soft reds, greens and blues in the design which looked so well on the black chiffon velvet.

Just then she heard Minnie, the maid, open the front door, and a moment or so later Fashion Fanny's father came into the room.

"Well, well!" he cried. "So you've bought yourself a new dress! It's mighty becoming to you. Why, you don't look a day older than when we were married. By George, you don't look any older than Peggy does now!"

"Why don't you say Fashion Fanny!" laughed mother. But she was greatly pleased.

"Dear me," she thought, "I only hope he likes my clothes as well when he gets the bill for them the first of next month."

DIRECTIONS FOR USING THE CUTOUT—Cut the figure and mount on pasteboard. Then cut out the garments and fold the tabs back so they will hold the garments in place on the figure. The hat must be cut on the dotted line to slip over the head.

## Latest Developments of Research Work Throughout the World

A large brandy-colored diamond, estimated to be worth \$50,000, has been found in a mine at Johannesburg. The stone weighs 20½ carats and is of irregular shape and of a superb brandy shade.

The total amount of ferrous metals in the 21 battleships and

battle cruisers to be scrapped under the five-power naval treaty is 205,000 tons, about 1 per cent of the annual production of scrap metals in this country.

Three years work, involving more than 1,500,000 calculations, is represented in the new tables worked out

by the United States Hydrographic office, by which the latitude and longitude of fast-moving water and air craft can be quickly determined.

More than 27,000 men are at work building the Sarda canal, in India. This canal is part of a huge irrigation scheme in the central

provinces which ultimately will bring 1,750,000 acres of land under cultivation at an estimated cost of \$29,000,000.

A new phonetic alphabet has been adopted by the Chinese for the transmission of telegrams. Heretofore Chinese telegrams were

coded into numerals and decoded by the receiving office.

Engineers are planning a 1,500-foot tower in connection with the Sesquicentennial in Philadelphia, Pa. It is to be known as the "Beacon of Progress," and will cost \$50,000,000.
