

Turkey to Have Modern Tools

New Project Will Revolutionize Entire Economic Life.

Washington, Dec. 8.—Word received here from Turkey indicates that the importance of the agricultural and industrial phases of the Chester project has been generally overlooked.

Steel plowshares will take the place of wooden ones being taken the place of wooden rakes and electricity will do most of the work so long done by hand.

One of the determining factors favorable to the Chester concessions in the Ankara assembly was the agreement that the Turkish women would be relieved of a great part of manual labor.

Every soldier present applauded this assertion, because he recalled that in the years he had been fighting through the Kurdistan mountains the women had often carried provisions and supplies as far as 100 miles afoot.

Admiral Colby M. Chester denies that he has sent any agricultural machinery to Turkey. He is awaiting for a copy of the concessions accepted by the assembly, on receipt of which he is expected to authorize a start.

General Goethals will have charge of coal mining interests and will turn out coal in blocks, specially treated with petroleum oil, which are expected to revolutionize the coal heating industry.

Family of First Methodist Pastor Campaign on for Conserving Food

Left to right: Mrs. John Clark, Mrs. J. E. Wagner and Eugene Paul Wagner.

Here is Mrs. J. E. Wagner, wife of the new pastor of the First Methodist church, with two of their children, Mrs. John C. Clark of Cornwall-on-the-Hudson, N. Y., and Eugene Paul Wagner. They arrived yesterday morning to join Rev. Mr. Wagner who has been here for 10 days. Their new home is at 104 North Thirty-third avenue.

Mrs. Clark who accompanied her mother from the east will return next week to New York. Mrs. Clark has a brother-in-law in Council Bluffs, Bert Clark, a prominent druggist. She attended Northwestern university

and is a member of Alpha Gamma Delta sorority.

The son, Eugene, was graduated from Old Wesleyan university at Middletown, Conn., last June. Two other sons, William L. Wagner of Flint, Mich., and H. Hughes Wagner, a junior student at Ohio Wesleyan university, will spend Christmas with their parents.

Rev. Mr. Wagner and Mrs. Wagner will celebrate their 30th wedding anniversary on December 17.

A large reception will be held later in December for Rev. Mr. Wagner and Mrs. Wagner by members of his new congregation.

Millions of Dollars to Be Spent to Carry on Research Work.

New York, Dec. 8.—Future generations will not perish from the earth because of shortage of food if Col. William Boyce Thompson's millions can avert the catastrophe.

Mother earth, through a copper cornucopia, poured out a bountiful supply of this world's goods into the hands of Colonel Thompson.

Thompson will be no less liberal in applying the millions yielded by his extensive copper mines to the task of healing Mother Nature's ills.

The copper king already has spent \$3,000,000 to lay the foundations of a plant hospital near his home in Yonkers. It will cost nothing less to establish the Thompson Institute of plant research.

Thompson embraces the gratifying philosophy that he is merely diverting into other channels the bounty that nature so readily yielded to him.

Famine Impends. Hanging over the horizon of the next hundred years, Thompson and his scientific assistants visualize the extinction of the human race unless the impending destruction of plant life is averted.

Said Dr. William Crocker, director of research: "In 25 years the United States population will equal the capacity of its land, as now farm-worked, to produce the daily food. We shall have 140,000,000 souls to feed in 1950 and 140,000,000 daily rations to feed them with."

Their Constant Peril. Thereafter, Dr. Crocker's prediction continued, we shall enter a period of constant famine peril. The population will go inevitably to 200,000,000 with 60,000,000 chairs lacking at the national dinner table.

It will be too late, then, to regret the follies that wasted and the rusts that ate the plant life of 1923. At that moment Mother Earth will make a summary solution of the difficulty—not by taxing her insulted powers to provide 60,000,000 rations, but by the simple device of killing off 60,000,000 humans.

But it is not too late now. Twenty-five years of the labor which have started in the incomplete first structure of the Thompson Institute will, if properly encouraged, humor Mother Nature into another extension of her surfeit of human kind.

Are Working Marvels. The scientists grouped by Dr. Crocker under the Thompson research administration are doing marvels in the diagnosis and treatment of plant disease. Patiently devoting the same care to the rotted fruit and the rusted leaf which the Rockefeller Institute devotes to diseased flesh, they are silently conquering as great a cure as was ever any plague.

Dr. Crocker paused before a row of six glass cases containing his most hopeless diseased "patients." "The rest of the building is far from complete, but we have our isolation ward in full operation," he said.

Plants, he explained, have as many different and serious ailments as human beings. They are different, though, in that their caretakers—the farmer, the gardener—have practically no knowledge at all of the nature of these ailments.

One Bad Handicap. Furthermore, the plant is unequipped to battle disease, for one very curious reason which Dr. Crocker expounded: "The animal has a blood circulation which admirably secures medical care. A doctor of humans can introduce a drug into the arm and know that in a few seconds it will be transported in the blood stream to the sick spot. Plants have a rudimentary circulation, sluggish and full of the no-thoroughfares which block the flow of saps."

Because plants are almost totally unresponsive to treatment after they have contracted disease, the fundamental philosophy of plant physiology, of which Dr. Crocker was professor in Chicago university, is to ward off disease.

School Men's Club to Meet

Two officers are elected and serve for one year only.

The School Men of Central High school will entertain the Omaha School Men's club Tuesday evening, December 11, at a banquet and program at Central High school.

This will be the second meeting of the school year and will be known as Business Men's night. Every member will bring a business man as his guest.

The next meeting will be Tuesday, February 12, 1924, at Technical High school and will be Ladies' night, the men acting as host to their wives and women friends.

The Omaha School Men's club was organized several years ago at Technical high. The idea originated among the men at Technical. Only

two officers are elected and serve for one year only. Dr. H. A. Senter of Central High was the first president. J. F. Woolery of Central high presided the next year as president, and E. H. Orchard of Technical as secretary-treasurer.

Last year the officers were shared by Principal D. E. Porter of Technical high as president, and A. A. Weisbecker of South high as secretary-treasurer.

The officers for the present year are: A. A. Weisbecker, South high, president, and V. E. Chateaufort, Central high, secretary-treasurer.

Membership in the club is limited to Omaha school men of which there are about 125.

Bankruptcy Petition for Barton Millard

Petition in involuntary bankruptcy was filed Saturday in federal court against Barton Millard of Omaha by the Merchants' National bank.

Petition in bankruptcy against the Merriam & Millard Grain company recently was filed by the Merchants' National bank and the National City bank of Chicago.

Gorton Roth, Omaha, was appointed receiver of the Merriam & Millard company Saturday by Federal Judge Woodrough, pending hearing of the bankruptcy proceedings.

The petitions allege that during October, while the Merriam & Millard company was insolvent, Mr. Millard committed acts in bankruptcy by transferring to his wife, Natalie, and to other members of his immediate family, certain stocks, bonds and other securities.

Thompson Not a Candidate.

Monmouth, Ill., Dec. 8.—Justice Floyd E. Thompson of Rock Island, member of the Illinois supreme court, when introduced today at a meeting of lawyers of the fourth supreme judicial district as a candidate for president of the United States, replied emphatically that he is not an active candidate, that he will not print his name to be entered in the Illinois preferential primary, and that he will give his "undivided attention to his supreme court duties."

Deaf Man Hears Well by Radio

First Human Voice Ever Heard Comes Through Receiving Set.

Dubois, Pa., Dec. 8.—Uriah Richards, well known citizen of this city, has not heard the sound of a human voice for 50 years until the other day. When he was 20 months old he was stricken with spinal meningitis and his hearing left him. Though normal in every other way, it has been a world of silence for him ever since.

But at last he has heard a human voice, though he knew not what it said or meant. He was too small to talk much if any when he lost his hearing, so he never learned the meaning of words.

A friend in an electrical store invited him to listen to a radio. It was a high-power receiving set with a two-stage amplifier which magnifies the normal sound about 600 times. To the ordinary person it would sound like a mighty crashing of great guns.

First they put the receivers on Richards' head. Then the friend began to tinker with the dials. Things began to happen which told those watching the experiment that Richards was hearing.

Richards, who is also a mute, became excited. His fingers worked nervously as the dials were turned and adjustments made.

Throughout the entire evening Richards sat deeply interested in the radio. He heard speeches, songs, music and all the usual program of a big broadcasting station. The speeches and songs he could not understand, but still the melody of the songs and the music appealed to him. He keenly enjoyed the music, the first he had ever heard.

Yes, he is a radio fan now. But there is a serious side to this experiment. His friends believe in time he will learn the language and what it means. The fact that his ears have begun to function is encouraging his friends. They hope through the use of the radio that possibly in time normal hearing will be restored to Richards. They also believe with the understanding of words the use of speech will be quickly accomplished. Richards is not a natural mute. He simply could not hear from infancy, therefore he never learned to talk. Now that he can hear others talk it is believed he will soon be able to pick up the language.

Schooner Seized With Rum.

New York, Dec. 8.—The Dutch schooner Zeehond was seized off Fire Island today by the coast guard cutter Lexington and her captain and crew were held for violation of the prohibition laws. In her hold was found 2,500 cases of champagne and other liquors valued at more than \$200,000.
