"They seem to have the cream of can't provide such luxury. Will I be happy if I finally marry one who hasn't much money?"

Money is a great help toward happiness, Elaine, but not everything, as many already know. Many of those women who cause so much wonder in your head would gladly change places with you for a chance of joy. Real devotion and a chance to be a partner in the struggle for success is what many of them crave.

Unless you realize that love requires sacrifice and patience, you'll miss a great deal that life has to offer. There are some women who insist upon a strawberry and cream existence instead of recognizing that love demands that they give as well as receive.

If you are tempted to pass all your admirers by when they offer just love, you are making a great mistake Choose a man who is certain of suc cess and gain world possessions by striving for them not by holding out your hands for them.

When you are tired from work pampered existence is appealing but not satisfying. Women who live for that never bring real happiness. Don't confuse love with lazy luxury. They are miles apart.

# How Do You Like Your loast!

Whether you eat toast upon the recommendation of your physician, or whether you prefer it because of its crisp, fluffy deliciousness, you'll find health and a new delight in this wholesome breakfast food.

## Rules for Making Good Toast

If you like the crispy, snappy, 'crunchy' dry toast such as physicians especially recommend because of its ability to stimulate the flow of gastric juices, follow these general rules:

Use your bread left over from the day before. Slice bread thin. Toast over a medium fire. Turn bread often. Use Peter Pan bread.

Or if you prefer toast with golden, crisp crust and fluffy inside like popcorn-

Use your freshest bread. Slice a little thicker. Toast over a hotter fire. Turn bread only once. Serve at once. Use Peter Pan bread.

Toast makes bread more delicious and more wholesome. It is bread at its best-more tempting in any way it is served. Toasting breaks some of the bread's starch cells. It increases the roughage in bread, which is extremely necessary to the system.
