

Holstein Leads in Milk Record

Agricultural College Cow Produces 7.146 Pounds of Butterfat in Two Days.

Lincoln, Feb. 24.—Varsity Plebe Horstke, an agricultural college student, topped the senior year-old class in the entire list of cows on the January honor roll of high producers of Nebraska, with the two-day record of 7.146 pounds of butterfat from her semi-official test, according to the monthly report released here. She also made a seven-day record of 612 pounds of milk and 52.22 pounds of butterfat, which equals 11.7 pounds of 80 per cent butter. This was the first month of her lactation period.

First place in the aged class went to Gerben Segis Rose, a Holstein owned by the University of Nebraska at the North Platte substation, who produced 6,480 pounds of fat in the two days. Varsity Derby LaVine, another cow owned by the agricultural college, was a close second with 6,470 pounds. A good record for a senior 2-year-old was made during the month by Polly Segis Sylvia Waldorf, a Woodland Dairy Holstein, who made 5,189 pounds of fat.

Ula Lincoln of the college herd placed on the honor roll in January. She produced 5,207 pounds of fat and stood seventh in the aged class. Bona Lee Bargenoch Lincoln was the only Ayrshire cow to place on the roll. She made 4,643 pounds and placed eighth in the aged class. Every other cow on the roll was a Holstein.

Farmers' Cost Accounts Show Oats Cost 35 Cents Bushel

Wahoo, Neb., Feb. 24.—It cost 10 farmers of this county 55.3 cents per bushel to produce oats and eight other farmers 41 cents to produce corn in 1923, according to an average of the cost account records kept by these farmers in this project of the agricultural extension service last year under the direction of County Extension Agent Walter Roberts and State Extension Agent E. L. Taylor. Man labor was figured at 30 cents an hour, horse labor at 15 cents, machinery charged at 4 cents per hour-hour which it was used and other charges for seed, twine, etc., were actually recorded. Land rent was figured at two-fifths of the crop in each case.

The 10 farmers who kept records on cost of oats production grew 288 acres, which averaged 34.5 bushels to the acre. An average of 6.3 hours of man labor and 14.9 hours of horse labor were required per acre. The total cost per acre on the tenant basis averaged \$7.32 or 29.9 cents per bushel. Figuring rent at two-fifths of the crop, or 13.8 bushels, the actual cost of the oats per bushel amounted to 35.3 cents.

The eight cost account records on corn production show that these eight farmers grew 482 acres of corn, which averaged 39.5 bushels per acre. Twelve and seven-tenths hours of man labor and 36.3 hours of horse labor were required per acre. The total cost per acre on the tenant basis was \$9.72. Figuring rent of the land at two-fifths of the crop, or 15.8 bushels, leaving 23.7 bushels to the tenant, each makes the corn actually cost 41 cents per bushel.

Two important problems of efficiency are illustrated in these reports, hatched in the incubator but the hen can't, so just as careful of the eggs you put in the incubator as you do in the hen.

Don't count your chickens before they're hatched," cause generally you'll be disappointed if you do. Once in a while you'll hit 100 per cent, but in other cases just lift your lid to Lady Luck an' acknowledge her smile.

One hundred per cent hatches are like oil wells—you always hear about the gushers an' the fellows that make a clean hit—but the thousands and thousands that sink their heads in the sand that gush nothing but expense don't do much croppin'.

Six or eight chicks from 13 eggs is a darn good average to shoot at for the most of us. It's all right to hitch your wagon to a star, but hardware is of more importance in ornamentals for the yard or grove, according to a suggestion for gardens and orchards by Purley L. Keens of state college.

Asparagus and rhubarb may be profitably fertilized at this time of year, Mr. Keens said. "The application should be applied liberally and cultivated into the soil early in the spring."

It is not too late to top dress lawns. If the grass has become thin, seed may be sown broadcast as the snows are melting in the early spring. A mixture of Kentucky blue grass and white clover is usually most highly recommended.

Twigs of wild plum, lilac, pussy willow and other shrubs may be gathered at this time of year and placed in vases or bottles of water and set in south windows. A great deal of pleasure may be had from watching the young leaves and blossoms develop.

Hog Prices Averaged \$47 at Gage County Sale. Beatrice, Neb., Feb. 24.—Sixty Poland China hogs were the offering at the G. A. Wiebe sale north of the city and were knocked off at an average of a trifle over \$47 each. One extra good sow topped the sale at \$60. Mr. Wiebe has the reputation of breeding the best in Poland Chinas.

Farmers' Union Notes. Humphrey—State President Osborn addressed a special meeting for stimulation of membership in the Farmers' Union, held at St. Mary school, five miles north of Beatrice, on Saturday, February 19. He had special emphasis upon the necessity of farmers organizing and cooperating to help themselves. The house was filled to capacity.

Omaha—L. Hoepfner, the Nebraska Farmers' Union agent for March, to succeed E. Wiebe, who has filled the position since 1918, Mr. Koch goes to Sioux City, Iowa, to meet the members of the Farmers' Union livestock commission there. Mr. Shaver, Nebraska agent for the Farmers' Union, has secured a commercial education, he spent several months teaching in the state. Then he made a real back-to-the-farm place. Several years ago he was drafted to the military service. He has been in the cooperative associations and moved with his family to Omaha, where he resides.

Coleridge—The deficit of the Farmers' Union store here, accumulated as a result of the deficit of the district office, was paid down to \$29.69 at the close of 1923. The merchandise and produce in the year totaled \$46,317.70, on which the net profit was \$14.65. The grossed total of the store was \$1,571.31. Agency—W. F. Dale of University Place, Iowa, was the speaker at the annual meeting of the schoolhouse four miles west of here in the evening of February 22. The attendance was four. Six new members were added to the local, and a new one was made a member of the district in the neighborhood.

Woman Success With Fruit Trees

Apples, Cherries and Grapes Make Good on Gage County Farm.

Beatrice, Neb., Feb. 24.—Fruit was grown on the half-acre orchard of L. J. Koenig, six miles northeast of here, last year, reports County Extension Agent Boyd Rist. This income disproves the statement made by many farmers that the farm orchard does not pay rent for the ground it uses, says E. H. Hoppert, state extension agent in horticulture. In commenting on the report, Rist says that the cherry trees, two crabapple trees and 24 grape vines are bearing in this orchard.

About 100 bushels of apples were sold, given away, and used by the Koenig family from the 20 trees last year. Those sold brought \$1 per bushel. The cherry trees yielded three bushels more than the family could use, the excess being sold at \$2.50 a bushel. The grape vines also gave a good account of themselves, producing six bushels of grapes. All of this fruit was grown on one-half acre of ground.

Mrs. Koenig is the orchardist on this farm. She says the results are due to proper care, nothing else. The soil is kept like a garden all summer. No weeds are allowed to start. The trees are pruned every year, the interfering branches being taken out. Where the top is too thick the branches are taken out to let the light in. The orchard is sprayed three times a year with a barrel outfit. The soil is kept like a garden all summer. No weeds are allowed to start. The trees are pruned every year, the interfering branches being taken out. Where the top is too thick the branches are taken out to let the light in. The orchard is sprayed three times a year with a barrel outfit.

Just as soon as the chicks begin to break through, stop turning the eggs and after all have hatched, throw the ventilators wide open, put out the egg tray and shells and let the chicks get their wings. Don't remove the chicks for 24 to 36 hours, and when you do move them to the brooder see that it is running in good shape before they are placed inside.

Poultry Culling on Increase in Dakota. Brookings, S. D., Feb. 24.—One thousand seventy-three poultry culling demonstrations were conducted in South Dakota during the last year and more than 100,000 birds were examined for egg production ability. The average production of the South Dakota hen just three years ago, census figures showed, was only 50 eggs a year. This was just about one-third the number of eggs to be expected of a good layer, the poultry specialists contended. According to poultry culling was stressed throughout the state.

With the County Agents. Falls City—Ben C. Dale, graduate of the Iowa State Agricultural college and former time county agent of Harrison county, Iowa, has been named as the agent for Richardson county, Nebraska, meeting to take to his new position.

Wahoo—Five pruning and orchard care demonstrations are to be held on different farms in the county, according to the county agent announced. Varieties of small home orchards, setting and pruning trees and vines, pruning and orchard management will be discussed and demonstrated at these meetings.

Geneva—Meat cutting and canning demonstrations were given by the county agent for three days, starting next Monday. The program of instruction will be given over to discussion of the subject of meat cutting. Blair—H. L. Keefe, president of the Nebraska Farm Bureau Federation, was to address the meeting of the county agent for the county here this afternoon.

Geneva—The first of a series of dress construction schools, for the women of the county, was held at the home of C. C. Bertram, near here. Women of the county have been invited to attend the schools, which will be held on Thursdays of each month.

Flock Sets Record of 184 Eggs Per Hen

New York. Bonds

New York, Feb. 24.—The burden placed upon the investment market in the absorption of the \$100,000,000 Japanese loan was reflected in lower prices for bonds that week. Although the success of the loan was reflected in lower prices for bonds that week, the success of the loan was reflected in lower prices for bonds that week.

Accredited Flocks Make Higher Record Than Chickens Handled in Old Way. Lincoln, Neb., Feb. 24.—With every egg that the mighty Nebraska hen laid in the farmer's basket, she put two pennies of clear profit in his pocket book. Such is the average record made by the 39,000 flocks that finished the accredited farm flock project in 1923 under the direction of the agricultural extension service of Nebraska. These hens averaged 112.7 eggs per hen. The average net profit per hen was \$2.14.

Financial News. By Associated Press. New York, Feb. 24.—With the markets displaying a staid tone after the disappearance of the speculative element from Washington and the appearance of bearish sentiment in the attention of business men reverted during the past week to the situation of the industrial sector, the new railroad financing figures were not quite as large as those reported last week, possibly because of weather conditions.

Omaha Produce. Omaha, Feb. 21. General Conditions. There is an upward tendency in most produce markets today, but in some a downward tendency. The market for wheat is firm and possibly increased somewhat. The market for corn is firm and possibly increased somewhat. The market for soybeans is firm and possibly increased somewhat.
