

# GAS COKE

An Ideal Fuel for Furnace or Base Burner. It contains more heat units than the best anthracite coal. Pound for pound it gives more heat, is cleaner, easier to handle, and gives better results.

## This is a Home Product

Our Coke is made right here in Lincoln, and is the best Coke on the market. It is the only Coke thoroughly adapted to domestic purposes

### What Is Gas Coke?

GAS COKE is made in the gas works of the Lincoln Gas & Electric Light Company. It is made from Youghiogheny coal, the best bituminous coal, containing the lowest percentage of ash and impurities.

In the retorts gas, tar, and smoke-producing volatile matter are driven off by external heating.

The solid carbon is left.

This is coke.

Coke is not half-burned coal. It's baked.

### What's so Good about Gas Coke?

Ton for ton, Gas Coke goes just as far as hard coal, and costs 30 per cent less.

It's smokeless. It does away with soot.

It's light to carry; easy to kindle; clean to handle.

It doesn't soil the hands.

### It's a Case of Knowing How

Gas Coke is daily growing in favor as a domestic fuel.

It would be much more widely used if people did not have an erroneous impression that a Gas Coke fire burns out quickly and injures the grate.

Treat it right and it will never do either.

### How to Burn Gas Coke

Our Gas Coke contains more carbon than anthracite coal, and being less dense, should be given less draft. Remember this, and the fire will last as long as with hard coal.

Coke burns more freely than coal if given the same amount of air; therefore, admit less air to a Coke fire, and always leave some ashes on the grate, which will check it.

### How to Kindle a Coke Fire

Kindle the fire in the usual way, and spread with a light body of Coke, and when fairly burning fill up with a DEEP, even body of Coke.

Keep a large body of Coke under a slow fire rather than a little Coke under a strong draft.

This will prevent the formation of clinkers, and the Coke will not burn any faster.

### To Keep a Low Fire

To keep a low fire, close the draft openings in the ash-pit door.

Keep the feed door closed, and the damper in the chimney pipe closed.

The damper should be opened full only when kindling a new fire.

Keep a layer of ashes on the grate, and when shaking, stop just when hot coals appear.

### To Bank a Fire for the Night

To bank a fire for the night, fill the fire box full of Coke, adjust damper according to the strength of the draft in your furnace, and throw on Small Coke or Dock Pea Coal to fill up the spaces.

This Dock Pea is exceedingly valuable to have on hand for banking fires at night.

It makes a fine compact mass, and brings down the average price of your fuel.

### It's a Case of Draft

"Keep down the draft."

There's the whole secret in burning Coke successfully.

A chimney damper is the greatest saver of fuel. If there isn't one in your chimney, have one put in.

Study your furnace. Find now much less draft you need with Coke than with hard coal. Then you'll never complain of burnt-out furnaces.

A representative on request will assist you to learn how to burn Gas Coke. Give your order now.
