

# GAS AND ELECTRIC EXPOSITION

DURING THE WEEK OF

## April 22-27, 1907

THERE WILL BE HELD AT THE

# Lincoln Auditorium

The greatest exposition of applied Gas and Electricity ever held in Lincoln--in fact the only one where both Gas and Electrical Appliances were shown side by side.

There will be Shown

### A Complete Gas Kitchen

### A Complete Electric Kitchen

both in operation and managed by the best experts that the manufacturers can furnish.

There will be every and all kinds of Household Appliances from a Baby's Milk Warmer to a Complete Laundry, among which will be many that are new and novel to Lincoln people.

### Something About It

There are few people who have any idea how many uses have been found for gas alone. There are today nearly eight hundred different uses for gas, and while but very few of the appliances can be shown at this Exposition, there will be people present who will be ready to give you full information about almost anything that you think you will need in your business or your household. In short, this Exposition is designed as a school for everybody who wishes to come and take advantage of it.

### There will be No Charge for Admission

During the entire week Mrs. Hiller, who is probably the most eminent lecturer and demonstrator in the United States, will be present and each day give a practical demonstration in the use of the gas range, covering its entire possibilities as well as opening up some new things in cookery.

During this Exposition you will have a chance to see about

every kind of gas and electric light on the market, and be able to make your own comparisons. The lighting of the auditorium will be a feature worthy of your attention.

The electrical display will be one sure to attract attention, as it will include many things never before shown in Nebraska, things in fact unknown except to those whose business it is to keep in touch with modern invention. Here you can see a complete kitchen, the family laundry and the family sewing machine all run by electricity; Many portable appliances, such as water heaters, milk warmers, cereal cookers, coffee percolators, chaffing dishes, stoves, grids, broilers, etc., besides the power machines, which are common enough today.

It is not possible to tell you in this page the things which will be shown and explained to you by competent experts representing the exhibitors. That there will be something worthy the careful study of the mechanic, the merchant, the manufacturer, the doctor, the lawyer, the preacher, the housewife and the hired girl, we can promise you.
