AMERICAN HIGHWAYS A SHAMBLES

A recent release of the National Safety Council points out that laws to control pedestrians on streets and highways may be necessary, unless walkers themselves take steps to eliminate the pedestrian hazard.

In an average year about one half of all automobile deaths are suffered by pedestrians. And, contrary to the general belief, the pedestrian is not an innocent bystander run down by a Machiavellian motorist. He is, in a great number of cases where death or serious injury results, solely to blame.

Larger cities, for the most part, have laws against jay-walking-the practice of crossing streets against the signal bells or lights. Smaller towns may be called upon to pass similar legislation-pedestrian carelessness isn't limited to the metropolitan centers. Again, thousands of accidents are caused by pedestrians walking on the right on highways and roads, where they can't see cars coming up behind them. It is being urged that this offense be made punishable by a fine, precisely as fines are levied against an automobile operator guilty of driving on the wrong side of the road.

-they will deny themselves almost everything before giv- is actually cheaper than usual. ing it up. And at the moment, with economic conditions

gradually improving, life insurance sales are on the up grade.

The Index likewise quotes statistics indicating how the life insurance industry, as a whole, can withstand depression. It has demonstrated that it comes as near as is humanly possible to being impervious to financial storms. It has made an exceptional record during some of the most trying years in living memory.

CONSTRUCTION AND RECOVERY

employer of ordinary and skilled labor and as a stimulator of all manner of other industries, is vividly illustrated in statistics published in a recent editorial in the American Builder.

In the years between 1923 and 1926, inclusive, home construction (which amounts to a little more than fifty pr cent of the construction industry as a whole in normal times) was a four billion dollar business. It gave employment to several million men actually employed in build- is this: In spending public money for relief and recovery ing, and to as many more in factories, mines and forests activities, where does the point of diminishing return oc- the United States fleet today is not supplying necessary materials. Employment was nicely cur? balanced between large cities, small and medium sized towns and rural areas.

In 1929 one-tenth of all gainfully employed workers were engaged in construction. And in 1930, when census figures were taken, there were 167,500 builders and building contractors, 929,400 carpenters, and 34,070 lumber tate agents.

The nation's normal requirement, to quote the American Builder again, is 800,000 new homes each year. At the moment, a tremendous housing deficit existst, due to the almost entire lack of building, particularly in the low and middle cost field, during the past four years, and the abnormally high rates of depreciation and obsolescence caused by insufficient repair and maintenance. Aggressive efforts are now being made to speed home building by making financing cheaper and easier. Success of such a movement is essential to recovery.

FIRE PROTECTION FOR MERCHANTS

PROTEST AGAINST PUBLIC DESTRUCTION OF FRIVATE PROPERTY

The Board of Directors of the Illinois Manufacturers' Association has adopted a resolution of more than ordinary significance. In it they protested the use of federal funds for the construction of publicly-owned utilities to compete with private plants, and called upon the Public Works Administrotion to change its policy.

The protest is based upon purely business grounds. In the opinion of the Association, construction of a taxfree plant alongside of a privately owned plant, undermines investments and menaces employment. It tends to increase taxes for all other types of property, and gives the users of municipal power an unfair financial advantage over users of private power. And, to clinch the argument, the Association states that municipally-owned plants cost more to operate, charge higher average rates to consumers, increase the public debt, and impair municipal credit. Storekeepers, farmers, wage earners, pro-fessional men, persons receiving their income from any source-all are threatened with the loss of part of their income when municipal ownership appears.

The Illinois Manufacturers' Association consists of experienced, realistic business men. They own factories of all kinds, and employ workers of all types. They are fully conversant with power costs, with taxation, with little in developing farm service. The vast majority of working conditions and employment. Their protest a- rural electrification projects have been carried on and treatment. That is certainly about as logical a program gainst use of public funds to destroy businesses upon which the public treasury depends for much revenue, should receive serious consideration.

DEMONSTRATING FINANCIAL STABILITY

At the close of 1930, according to an article in the Index, approximately 68,000,000 persons, including holders utility pays out about 17 per cent of gross revenues for of group insurance and about 2,000,000 who live in for- taxes-and municipal plants pay nothing at all. eign countries, owned life insurance policies written by American Companies. The Vinson bill authorizes struction in addition of 100 100 tons all the battleships under a general which says:

"Provided, That the President of the United States is hereby authorized to replace, by vessels of modern design and construction, vessels in the Navy in the categories limited by the treaties signed at Washington, February 6, 1922, and at London, April 22, 1930, when their replacement is permitted by the said treaties." This would add approximately one thousand million dollars (1.000.000 .-000) to the navy bill and give the nually.

It will also give the United States the greatest fleet in the world, stimulate naval building in Japan and Great Britain and increase the tension on the Pacific to a highly dangerous point. Moreover, with such fat contracts awaiting them if the 1935 doubt as to the efforts that the shipbuilders with their Shearers will make to wreck that Conference?

These are the essential facts with magnitude is out of all reason. It is being rushed through Congress beexpress the tremendus opposition that exists in this country to so outrageous a measure.
