Kitchen Harmony
Harmonious color schemes enhance the beauty of the kitchen. It isn't difficult to transform dustpans and broom handles into attractive additions to the kitchen color scheme. Painting the back walls of cabinets, cupboards and shelves also produces attractive results.

MILWAUKEE, WIS.—An ingenious man recently visited the North Woods, which he had left 38 years ago, and found that the lumberjacks were handling pulpwood the same old way, by hand. He began to figure out ways to speed-up the work of getting out raw materials so desperately needed for making paper. His solution was very simple and the new equipment operates similar to a man's arms when loading wood.

Two mechanical arms are pushed into the pulpwood. The top arm comes down clamping the wood to the two lower arms. The entire mechanism is then tilted back, lifting the two arms under the wood to a 45 degree angle. The tractor backs away from the pile, lowers the load onto two runners, which are pushed along to the place of disposal. There the pulpwood is raised again, maneuvered to the proper spot and loaded or dumped. The equipment is hydraulically operated. Photo above shows the new type of loading equipment. The inventor is E. A. Drott, president of the Drott Tractor Company and the Hi-Way Service Corp., here, and an outstanding contributor to the war effort.
