Occupational Cancer

(by Dr. John E. Moseley, Assistant Radiologist at Mt. Sinai and Sydenham Hospitals, Chairman of Harlem Committee, American Cancer Society.)

Lying on the beach enjoying the invigorating hot sun, one would hardly suspect that overexposure to these wonderful, life-giving rays could result in a skin irritation which, in some people, might lead to Dr. Moseley's cancer. Nevertheless, cancer of the skin is most frequently found in people who work long hours out in the sun and wind. It is common among farmers, particularly in the sunny South. In the North, the incidence of skin cancer is much lower.
