The Pleasures and Benefits to Be De-

rived in the Mountains of Colorado. The days are here, when one begins to make plans for his summer outing, and studies railway maps and questions friends to learn of the best spots, and where the most varied amusements may be had for the least outlay. To Kansas people the Rocky mountains are the most convenient and afford opportunity for the enjoyment of tastes of all shades. Twenty-four hours places the most eastern dweller of the state right in the heart of the great divide and he has enjoyed such scenes enroute, as wealthy tourists go across the ocean to find. The Denver & Rio Grande road, the Great Scenic Route of the world, takes you at Pueblo or Denver, and whirls you through canons where there must have been an enchantment and where giant arms have dashed the boulders into their present resting places. The ride through the Royal Gorge displays the great ingenuity of its engineers, and the obstinate determination of its builders. The rails are placed in almost inaccesible places, along the edge of the stream or torrent, which with wonderful skill has been forced out of the way to make room for the rock road bed and the iron rails. At certain points the torrent maintains its supremacy, but the difficulty is met and surmounted, a set of hangers being made into the cliffs overhead, to support the bridge work and track. The stream is still jubilant of its power over man, and laughs, booms and dashes by as the train passes, not caring for the queer shadows that fall into it, if it can only be supreme at this critical point. The canon is one of the grandest in the world, barely wide enough, in certain parts, to admit of the stream and the tracks, the granite walls of giant mountains towering above and over all, and giving a still more impressive object lesson of the great force of Nature which has caused it all. The climb is a long one, and after leaving Salida you think it is over and that as you enter upon a slight down grade, or a smiling valley, that you are now going to slide down into the great San Luis Valley. Never were you more mistaken; and if you look you will see two puffing little giants pulling the train for several hours yet. At length, however, when you have begun to wish for breakfast, the summit is reached, and there is a rapid stride down the western slope, and into the beautiful val-For more than fifty miles the track is as straight as an arrow, and the train speeds along bringing you into Alamosa for breakfast, right under the shadow of Blanco, the highest mountain in this country. All around are smiling fields as far as the eye can reach, until vision is interrupted by the mountains which encircle the valley. Some one has said the West Mountain and the Sangre de Cristo range on the east are a ring and that Blanco is the setting. These mountains afford every variety of amusement and enter-tainment. There is fine trout fehing; in season there are plenty of ducks and Sand Hill Cranes, Brants, Geese and Curley. These are in the valley. If big game is desired you must go back into the mountains, where Elk, Bear, Mountain Sheep and Lions, Glouse, etc., are still to be found. Outfit at one of the pleasant little hamlets and spend a month in these mountains and in this valley, if you want an outing. If you wish to meet the gay social parties, that make the mountains their home in summer, go to Colorado Springs, Manitou, or some other of the delightful reserts on the line of the Denver & Rio

We know of no greater advantage to heath, than may be gained by a sojourn away from the cares of business and daily duties of the routine of living. Here there is no routine but a continued change, of pleasure resulting more profitable to a tired body or overtaxed mind than any other opportunity within reach. The Denver & Rio Grande Company looks after the comfort of its patrons with scrupulous care, and provides the best facilities for observation and enjoyment of the ride. If you have never yet visited these precincts, decide now to do so this year, and get the rest and health you have been looking for. F. P. BAKER.

At a village wedding in Worcestershire recently the clergyman asked the bridegroom the usual question whether be his wedded wife, and, the rustic. scratching his head for a moment or two replied. "Ay, I'm wulling, but I'd rather hae her sister."—London Telegraph.

Public Lands in Oklahoms. A careful investigation of the public

records discloses the fact that there are yet several millions of acres of public lands in Oklahoma yet subject to homestead entry and is ttlement.

It has generally been understood that all the lands in Oklahoma fit for agricultural purposes are already occupied, but such is not the fact. Owing to the method adopted for the opening of these lands to settlement, in many cases as high as five or six persons would settle on a single track on the day of the race, and rather than stand the expense of a contest, or run the risk of other trouabandon the land. Again, the main tracts near the cities or proposed town sites and along the lines of railroads, and thus many hundreds of almost equally as good farms as are in Oklahome were paseed over in the mad rush for homes.

It is true that a large portion of the yet unclaimed public lands are more fit for stock-raising than for agricultural purposes; yet there are still hundreds of good homes awaiting the taking in that country and undoubtedly a large number of eastern people will take advantage of the same the coming season.

## Household Marketing.

In the matter of purchasing food, the housekeeper must use good judgment, going to market and not trusting the selection of her meats and vegetables to an ignorant order boy. A little exper ence will enable one to learn to know the best cuts of meats, and if the marketman sees that his customer knows what she wants, and that she will not be satisfied with inferior meats he will serve her with the test. It is generally economical to buy the highest grades of proceries and meats, as the best goes further and is more readily susceptible to changes and va-

### BIG DAY FOR BEETS.

NEBRASKA'S PROMISING INDUS-TRY ENDORSED.

The State Convention Starts With Much Promise and a Fine Array of Delegates -Addresses by Congressman Melkle-John, Governor Holcomb, Prof. Nicholson and Other Prominent Gentlemen.

The State Sugar Beet Convention.

The sugar beet convention at Fremont drew a large attendance from all sections of Nebraska. Secretary Nason, in calling the meeting to order, made a brief address on the consumption of sugar and the interest taken in its manufacture from sugar beets.

Congressman Meikeljohn was then introduced and spoke in part as fol-

Mr. President and Gentlemen of the Convention: You have been convened under a call to consider a special subject of agriculture-the encouragement of the cultivation and production of the sugar beet. I feel justified, however, when we contemplate the diversified products of our soil, in diverting for a time to invite your attention to the occupation of agriculture generally.

The tillage of the soil increases in importance with the advancement of civilization, the augmentation of population and the consequent sharp competition in other arts and avocations. The condition existing at the birth of our nation caused our forefathers to turn their attention to agriculture and it was guarded by earnest and zealous

supporters.
We see today in the west a people cultivating and producing this same product, which was cultivated and produced by the Egyptians centuries before the Christian era. These observations lead toward a confirmation of that old maxim, "There is no new thing under the sun." Egypt was the granary of the world when Joseph opened it to Israel. She lighted the torch of civilization in the remote centuries of the past and blazed the way for the westward march of empire.

There is a growing tendency in this generation among our young men to forsake the field and gravitate to the cities to engage in commercial or other industrial pursuits. If this inclination is based upon a sentiment that this avocation of life does not earry with it the dignity of other professions, and that there are not the advantages for him on the farm as in other avenues of life, he should reflect on this expression by Cicero: "Of all pursuits from which profit comes, nothing is superior to agriculture, nothing more enjoyable,

nothing more worthy of a freeman." The farmer today is confronted with a depression of prices for farm prowhich discourages and heartens, but he should remember that he is not alone in his suffering from existing conditions. His distress is that of others in the many avocations of life, for whatever the occupation in an agricultural region none can prosper, when farming ebbs and declines. riculture lies at the very foundation of our national wealth and prosperity and is the main pillar of our nation's glory and strength.

THE BEST CROPS. The consideration of the subject of diversification of farm products leads us to the inquiry of what crops can be introduced and successfully cultivated. There are many elements upon which the answer to this important query must be predicated. The crop must be one to which soil, geographical location, and climate conditions are spe-cially adapted. The diversification should be along lines where cost of transportation will be eliminated and the demand for the product will closely approach the supply to insure a just remuneration for capital and labor employed. The profits from the new industry should be as great or exceed those reaped from the crop which it supplants

Germany and France found these elements combined in the cultivation and production of the sugar beet, and for more than a century has protected, he w s willing to take the woman to nurtured and encouraged it until it has reached the importance of any other industry in the continent. When the great Napoleon was enforcing his continental policy of blockades, decrees and embargoes and putting forth his energy to produce sufficient sugar for his empire his enemy, England, was seeking through every avenue to bribe his chemists, disparage his undertaking and bring ridicule on his efforts and endeavors. Caricatures were exhibited in Paris in which he was represented as squeezing a beet into his coffee and his son, the young king of Rome, as sucking a beet, and the nurse addressing him is made to say, "Suck, dear, suck; your father says it's sugar.

often hear it said, until with many it has perhaps become a conviction, that the cause of agriculture has not had the festering care and attention of our government, but has been sacrificed in the interest of other industries. This unfortunate assumption ble, would, unknown to each other, often hissed from the "hustings" for abanden the land. Again, the main sinister purposes, has had a pernicious race for lands at those openings was for effect upon public minds. The most eminent men in public station since the foundation of our government have zealously guarded and protected agriculture. This is very clearly manifested in the debate on the first tariff bill before congress, in which agricultural products were given special rates of duty to encourage and foster them, and guarding the market from encroachment by other nations whose capital and labor were employed in the same avocation.

Our present status in regard to sugar is such that of an annual consumption of four billions of pounds we produce but one-eighth, and are dependent upon foreign countries for the balance. For this supply of foreign sugar we send abroad annually one hundred million; of dollars in gold, or its equivalent. This is an unnecessary drain upon the

wealth of our nation. That the soil and climatic conditions are favorable to the cultivation and production of the sugar beet, has been conclusively proven by scientific and practical research and investigation. The development of the industry in recent years in Nebraska, Utah and California is a guarantee of its success in this country. Every pound of domestie sugar manufactured represents inrestment of capital, employment of labor, an equalization of the production

and consumption of other farm pro duets and an increment to individual

and national wealth. The beet sugar especially adapted to battery on his wife, and was taken to the soil and climate of Nebraska, the the central station for a hearing. His continuous warm, dry weather producing its saccharine strength, may yet be overtaken by the rains from heaven, to cause it to take on new growth, decreasing its purity or strength for sugar, and such a season we have just experienced here and in continental Europe. Is it good reason for our farmers of sugar beets to become disheartened? We ought to be made of sterner stuff, especially in view of the fact that by later planting, much of such loss can be avoided and more especially in view of the repeated loss of other crops on which so many of our farmers almost wholly rely.

Agriculture will always maintain that rank in the future that it has in the past. Mankind is sustained, sheltered and nourished from the bountiful lap of nature, through the grace and favor of her Divine Master. ground, the air, the sea, are her storehouse. The barbarian, in his darkness and ignorance, is fed by the same hand as he who is born in a land of civilization and enlightenment.

The earth is the commissary of God for His children. She gives food to the hungry, raiment to the naked and protection to the unsheltered. Agricul-ture is but her helpmate. It is the creator of commerce and manufactures. the forerunner of social development and progress and the bulwark of our national strength and glery.

Humanity draws upon her for sustenance, commerce turns to her for aid and support and manufacture invites her products to the door of a great industrial system, where sinew and brawn of toiling masses are exchanged for the

Governor Holcomb was introduced and delivered an interesting address. He said he come to the meeting tolearn more than instruct. The real farmer is Nebraska's wealth. He thought sugar production offered a fruitful source of profit and it should be maintained until we have many factories. He discussed the plan of small factories making low grade sugar and having a large refinery to handle their products. This is an industry that gives employment to men and women, and there is no danger of not finding a market for the

Prof. H. H. Nicholson of the state university gave a very interesting talk upon the scientific treatment, agriculturally considered, of sugar beets. One hundred and fifty years ago, when sugar was first discovered in beets, there was only I per cent of sugar, where it is possible now for beets to contain as high as 20 percent of sugar. The greatest problem is seed. We are dependent upon seed brought from the old country. This seed is bred up from a low to a very high grade. We must learn to produce seed; but it takes several years to put a good grade upon the market. Seed that does well in the vaileys will not do well in other places. By science we must produce something of uniform results. The factories must find a means of saving that which they now cannot use. When this is done many dollars will be saved. The professor thoroughly discussed the small factory question and at the conclusion he was compelled to answer questions for half an hour.

Hon. I. A. Fort read a carefully prepared paper on co-operative factories. He went back into history and recited instances of successes from mutual cooperation. At the present time we only have corporations, of which many disapprove. As law is a rule of action, he would create a law making a paid department in connection with the state university to give its entire attention to the production of beets and fac-Mr. Fort would have a factory established on the co-operative plan to refine low grade sugar. taking it from proposed low grade factories, this cooperative factory to be under the laws of Nebraska and state officers to inspect and approve or disapprove its con-

Daniel Farrell, Jr., read a well prepared paper upon the subject, "The Beet Sugar Industry as a Factor in Manufacturing." In his paper Mr. Farrell noted thirty products that can be made by the factories, after the beet erop had been worked up. Nebraska had good soil and sunshine and with these should forge to the front and compete with eastern sisters.

The following officers were elected: President, R. M. Allen, Ames; secretary, W. N. Nason, Omaha; assistant secretary, C. McLernon, Sidney; treasurer, W. D. Whitmore, Valley; vicepresidents, C. A. Atkinson, Lincoln, D. Farrell, Jr., Omaha, Bert Mapes, Norfolk, W. B. Norcross, Beatrice, J. B. Cessna, Hustings, W. H. Reynolds, Chadron.

## LEGAL BRIEFS.

A Philadelphia woman who put her money in Atchison before the slump in prices sues the president of the company for deceiving her in his resease reports of the condition of the road.

A St. Louis decision runs to the effect that a woman has an insurable interest in the life of her fiance, even when the man is already married, but designing getting a divorce to marry the new sweetheart.

The Massachusetts Supreme court has decided unconstitutional a law compelling the railroads to sell at ruling rates mileage tickets good on any railroad. Michigan has, however, recently passed a similar law.

After a fatal runaway accident in Polk county, Iowa, the coroner was persuaded by several of the leading citizens that there was no necessity for an inquest as to the cause of death. They wished, as taxpayers, to avoid expense to the county, but the coroner has now

begun suit to recover his fees. A fire broke out in a butter factory near Madison, Wis. After all the water on hand was used 2,300 gallons of mild were used in its stead and the fire was put out. Now the insurance company is not quite certain whether it should pay for the milk as well as for the slight damage done to the building.

The wife of a Paris manufacturer ran up a bill of 11,000 francs with a milliner. This the court, without disputing the items, has ordered cut down. on the ground that the woman's husband is not bound to pay bills which are out of proportion to his means and position, and that the dressmaker should have considered this point or referred to the husband before the bill grew so big.

How a little girl likes to say to a bey, "Oh, you're going to catch it!"

A Philadelphia man was arrested on warrant, charged with assault and wife, on her oath, said he beat her so badly that she was detained in bed two days. When Magistrate South asked him why he had beaten his wife, the prisoner said, "Well, judge, you see. I opened the door and threw my hat inside to see if it would be welcomed, and when she threw it out I was so mad that I went inside and licked her.

Very Awkward Indeed.

This is precisely the kind of mistake a an makes if he "turns out" on the wrong man makes if he "turns out" on the wrong side of the road when a vehicle comes to-ward him. No less absurd is the error of the individual who railes drastle medicines to relieve his liver. That organ is on the right side, and the road to its relief is Hostetter's Stomach Hitters, a medicine also adapted to the relief of dyspersia, constipation, kidney and rheumatic adments and mafuria.

Floral Tracery on Metal.

By chance it has been discovered that ven the most delicate tracery of the petals of flowers can be reproduced in During the trial of a new fase the other day a small leaf fell between a dynamite cartridge and an iron block on which the cartridge was fired. As a result a perfect imprint of the leaf was left on the iron.
