Opportunities in the South

No portion of the United States has made greater progress in the last year or two than the South. Northern and foreign capital is rapidly invading that section, finding profitable investment in the various industries and factories that are being rapidly developed and built. The great influx of settlers is creating an increased demand for lands of all kinds and prices are gradually advancing, as they will for years to come. Work is plentiful and roversy practically unknown. Alabama is supplying coal and iron to all the world. More money can be made and with less labor in the raising of small fruits and berries and in truck patching on the Gulf Coast than in any other state in the Union. Strawberries from Alabama reach northern markets before those from the states in the southeast. Cattle can be raised with great profit, there being millions of acres of cheap range lands. If you are interested in the south and its resources and desire information on any subject, address
