WAR NOT SO DEADLY CASUALTIES IN MODERN TIMES

COMPARATIVELY FEW.

Battles of To-day Fought at Greater Distances and With More Humane Weapons-Interesting facts of Some Great Conflicts.

In the annals of the American Academy Gen. T. H. Bliss, discussing the important elements in modern land combats, arrives at the conclusion that the tendency of modern warfare is to become less deadly. He gives a table of the principal battles fought from the beginning of the Seventh Years' War, in the eighteenth century, up to and including the battle of Mukden, in the twentleth. He summarizes the results as follows:

In the twelve principal battles of the Seven Years' War the average losses were-victors 14 per cent, defeated 10 per cent.

During the Napoleonic epoch an average of twenty-two battles gives victors 12 per cent loss, defeated 10 per cent.

The average loss in four principal battles of the Crimea was for the victors 10 per cent, for the defated 17 per cent.

The average of four principal actions in the Franco-Austrian war of 1859 gives for the victors 8 per cent loss, for the defated 8.5 per cent.

In twelve prinicipal battles of the civil war the losses of the Union Army amounted to 19.7 per cent and of the confederate armies to 19.6 per cent.

The average of six principal actions in the Austro-Prussian war of 1866 gives for the victors 7 per cent, for the defeated 9 per cent.

The average of eight actions of the first period of the Franco-Prussian war of 1870 gives for the victors 10 per cent for the defeated 9 per cent The average of three principal actions in the second period of the Franco-German war gives for the victors 2.5 per cent for the defeated 3.5 per cent.

In fourteen battles in the Russo Japanese war (excluding the slege of Port Arthur) the average loss for the Russians 9.5 per cent, for the Jap anese 4.6 per cent.

From these suggestions he concludes that there is a steady tendency to decrease in the battle percentage of loss. This diminution in the deadliness of war is traced (1) to the gradual disappearance of the individual duel. In ancient battles no man played his part properly unless he made a hit on the body of his antagonist In modern battle it requires the combined efforts of many men through a long day's fight to make a hit upon, the body of one antagonist. He notes (2) that there is a tendency in increasing concentration of energy on the battle field, as shown by increased number of combatants, and this increase in concentration is one of the causes of decrease in loss. It was the dispersion of the combatants over a vast extent of country that made the Ameri can civil war so much more sanguinary. (3) Modern wounds are more frequently healed. The modern bul let is humane. (4) The old firearm at close range, against close formation was naturally more deadly than the more rapidly fired gun of to-day discharged at a great distance against extended formation. (5) In olden bat tles, as at Waterloo, only a mile parted Wellington from Napoleon. Defeat meant immediate pursuit and greater loss. Now, at Mukden, the opposing commanders were from twenty-five to thirty miles apart, and before the reserves of the victors could begin pur suit the vanquished could ar range a fairly orderly retreat. (6-Formations are now adapted to the enemy's weapons.

To make Cheap Gas-light for Country Homes

AKE a common Clay Pipe. Put a simple "Acetylene" Gasburner on its

stem. Bind the two in position with a tight-fitting piece of Rubber Hose.

Then till the bowl of the pipe with fine-ground Calcium Carbide.

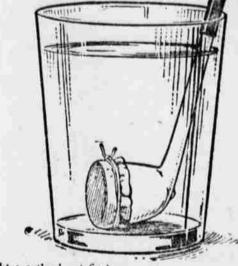

Next tie a rag over head of the bowl to keep in the Carbide.

Now put the pipe into a Glass of Water, as in picture. There you have a complete Gas- plant for 25 cents. Touch a match to the Burner-

and you'll get a beautiful White Gaslight Of course, this is only an experi-

ment, but it shows the wonderful simplicity of Acetylene Lighting.

That very simplicity gave Acetylene

Light a setback, at first.

It seemed so simple to turn Calcium Carbide into Gas-light that over 600 different kinds of "tanks" and "Acetylene Machines" were invented, patented, and marketed for the purpose, by about as many different

Well, the thing to be expected certainly happened! About 530 of these "Acetylene Machines" had been invented and sold by people who knew more about *Tinware* than they did about *Gas-making*. The "Calcium Carbide" was all right all the time,

but 530 of the machines for turning it into Gas were all wrong all the time.

So Acetylene Gas "got a bad name," though it is

clear enough now that it never deserved it at any time. It was like selling Wood Stoves to burn Hard Coal in, and then blanning the Coal for not burning.

Lots of things happened to grieve the Owners of these 530 makes of alleged "Acetylene Machines."

But very few accidents occurred from them even in the days of rank experiment and dense ignorance, among, "Generator" Makers.

Of course, a gun will go off unexpectedly, now and then, if the trigger be pulled by a person who "didn't know it was loaded."

But, that's no fault of the Ammunition-is it?

Well, finally the Insurance Companies got after these 530 odd makes of "Acetylene Machines" that wouldn't Acetylate, and the Insurance Board made an investigation of all Generators that were submitted to them.

Then, out of the 600 odd "Machines" patented, only about 70 were "permitted" by the Insurance Board to be used.

Oh, what a howl was there!

out extra charge, which used any one of these 20 Acetylene Generators it had found safe, and effective, just as it permitted houses to be piped for City Gas, or wired for Electricity, under proper conditions.

Now, the Insurance Companies ought to know whether or not these 70 different makes of Acetylene Generators were absolutely Safe to use.

Because, they have to pay the bills, if Fire or Explosion occurs, from any one of the Acetylene Generators they authorize.

And, here's a proof of their good judgment. Though there are now Two Million people using Acetylene Light in America, there have only been four Fires from it in one year, against \$865 Fires from Kerosene and Gasoline.

There have also been 4601 Fires from Electricity. 1707 Fires from City Gas, and 520 Fires from Candles. Besides these there have been 26 Fires from the

Sun's rays, But, --only four Fires from Acetylene. That shows how careful the Insurance Board was in its examination of Acetylene Generators, and in "permitting" only the 70 makes that were above suspicion, out of the 600 experiments that were once bn the market. . . .

Well,—the boom in Acetylene Lighting made lower prices possible on the material it is derived from, viz., Calcium Carbide, a material that looks like Grante but acts like Magic.

Today, Acetylene Light is a full third cheaper than Kerosene Light, or Gasoline Light, per Candle Power. It is not more than half the price of Electric Light, nor three-fourths that of City Gas.

If I can't prove these statements to your full satis-faction my name is not "Acetylene Jones."

But Acetylene is more than the safest and cheapest

Light of the year 1905. It is also the Whitest Light—the nearest to natural Sunlight in health-giving Blue and Violet rays, and because of this, with its freedom from flicker, it is the easiest of all Artificial Light on the Eyes. It is so much like real Sunlight that it has made

plants grow 24 hours per day in dark cellars where no ray of Sunlight could reach them. It made them grow twice as fast as similar plants that had only the Sunlight of day-time, viz., half the time.

That was proven by Cornell University in a threemonths' experiment made this very year.

Now, I've saved up for the last a point more im-portant to you than all the others about Acetylene Light.

It consumes only one-fourth as much of the vital Oxygen from the Air of Living rooms or bed-rooms, as either Kerosene or City Gas-Light consumes. That's a tremendous difference in a lifetime, mark

you-three-fourths of a difference.

Because, —Oxygen is Life. And every bit of Oxygen stolen from the lungs of Women, Children and Men, through Lighting, is a loss that can never be made good again.

A 24 Candle-Power Acetylene Light costs you only

two-fifths of a cent per hour. That's about \$5.85 per year, if burned every night in the year for four steady hours.

A Kerosene Lamp of equal capacity would cost you a third more, viz.: three-fifths of a cent per hour for Kerosene alone, or \$8.75 per year. That's exclusive of broken lamp chimneys, new wicks, and the everlasting drudgery and danger of demine filling and triumning dolly.

cleaning, filling and trimming daily.

I want to prove these figures to you, Reader, if you are a house-owner or storekeeper.

Tell me how many rooms you've got and I'll tell you what it will cost to light them with brilliant, beautiful, Sanitary, eye-saving Acetylene. Write me today for my Free Book about "Sunlight

on Tap."
