Another Good LAND OFFERING

On May 22nd the Government will open its second tract of 12,000 acres of perfectly irrigated land in the Big Horn Basin, near Garland and Powell, Wyoming. This irrigation project of the Government is first-class and reliable. This land is adjacent to and along side of the Burlington Road. Powell and Garland are prosperous towns. The community is absolutely first-class, and there is not a better place to live in the whole west for climate, sunshine, productiveness of soil and many other good reasons, than the Big Horn Basin. This land is \$45 an acre in ten annual installments without interest.

320 ACRE MONDELL ACT.—Select locations for homesteading in Wyoming near Newcastle, Upton and Moorcroft. Plots on file. Write me.

I conduct an excursion on the first and third Tuesday of each month. Only \$27.50 round trip homesekers excursion rate. No charge for my services. Write me at once about this new tract. The excursion of May 18 or June will be in time for good selections.

Home Course In Modern Agriculture

X.—Some Insect Pests

By C. V. GREGORY,
 Agricultural Division, Iowa State College

Copyright, 1909, by American Press Association

AMONG the enemies which the farmer has to combat perhaps none are more troublesome than insects. Nothing is more aggravating than to have a promising crop of fruit or grain attacked by a horde of "bugs" and greatly injured if not entirely ruined.

Insects, like weeds, are very difficult to deal with if you go at them one at a time, but if properly managed they can be easily held in check. From the standpoint of the damage they do, insects may be divided into two classes—those which attack field crops and those which are injurious to fruit and garden crops.

There are a number of insects which attack corn. While these are seldom present in large enough numbers to destroy any considerable part of the entire crop, the money value of the damage they inflict on the corn grown on a quarter section each year amounts to no small sum.

One of the most important of these pests is the corn root worm. The eggs, which are laid in the cornfield during August or September, hatch during the next June or July. The worms when full grown are about one-third of an inch long and as big around as a pin. They bore up inside the roots, injuring them so badly that the growth of the plant is seriously checked. Often, too, the roots are so weakened that the corn blows down badly. Some time during August the worm goes through a transformation called pupation, which changes it into a small light green beetle. This beetle feeds on the silks and tips of ears and lays eggs for the next year's crop of worms.

Another insect which lives on the roots of corn is the root louse. These lice are very small and helpless. They are kept through the winter in the egg stage in ant hills. In the spring after they hatch they are placed on the corn roots by the ants. The ants are very fond of a sweet fluid which is secreted by the lice, and they take care of them for this purpose.

Other insects which do more or less damage to the corn crop are the stalk borer, wireworm, white grub, bill bug, cutworm, etc. These insects live and multiply in grass land and from there find their way into the adjoining corn fields. They do the greatest damage, however, when the grass land is plowed up and put into corn.

The damage from nearly all insects affecting corn, small grain or grass can be readily prevented by a good system of rotation. This is especially true if clover is used, since such insects as cutworms and grubs do not work to any extent on clover. The frequent plowing of the ground and change of crops where rotation is followed are fatal to most insects. Damage from these pests will be still further reduced if the soil is kept so well supplied with plant food that the plants can get a quick start in the spring. Treated in this way, they are more vigorous and better able to withstand insect attacks.

These remedies, with the exception of the last, cannot be applied to or

FIG. XIX—CORN PLANTS INJURED BY ROOT WORM.

chard and garden crops, since these must be grown on the same land year after year. For the insects affecting these crops spraying is the best remedy.

The principal insect that attacks the apple is the codling moth. These insects pass the winter in a ball of silk, or cocoon, which they spin around themselves. These cocoons are hidden beneath the bark and under rubbish.

Such as happen to escape the hungry search of woodpeckers and other birds change to the pupa stage in the spring.

To this stage changes take place inside the body of the worm which so transform it that early in June it comes out of the cocoon as a small brown moth.

These moths lay great numbers of eggs, which hatch into small worms. These worms eat the path way into the apple through the blossom end. The apples thus affected usually fall off, and in a short time the worms crawl out and again spin cocoons around themselves. The life cycle is lived over again, and a second brood of the

17 CTS. A DAY BUYS AN OLIVER

This amazing offer—the New Model Oliver Typewriter No. 5 at 17 cents a day—is open to everybody, everywhere.

It's our new and immensely popular plan of selling Oliver Typewriters on little easy payments. The abandonment of longhand in favor of clean, legible, beautiful typewriting is the next great step in human progress.

Already—in all lines of business and in all professions—the use of pen and ink is largely restricted to the writing of signatures.

Business Colleges and High Schools, watching the trend of public sentiment, are training a vast army of young people in the use of Oliver Typewriters.

The prompt and generous response of the Oliver Typewriter Company to the world wide demand for universal type-writing gives tremendous impetus to the movement.

The Oliver, with the largest sale of any typewriter in existence, was the logical machine to take the initiative in bringing about the universal use of typewriters. It always leads!

Save your Pennies and Own

OLIVER
 Typewriter
 The Standard Visible writer

This "17 cents a day" selling plan makes the Oliver as low as to rent. It places the machine within easy reach of every home—every individual. A man's "pin money"—a woman's "pin money"—will buy it.

Clerks on small salaries can now afford to own Olivers. By utilizing spare moments for practice they may fit themselves for more important positions.

School boys and school girls can buy Oliver by saving their pennies.

You can buy an Oliver on this plan at the regular catalogue price—\$100. A small first payment brings the machine. Then you save 17 cents a day and pay monthly.

And the possession of an Oliver Typewriter enables you to earn money to finish paying for the machine.

The Oliver is the most highly perfected typewriter ever marketed—hence its 100 per cent efficiency.

Among its scores of conveniences are:

—The Balance Shift
 —The Ruling Device
 —The Double Release
 —The Locomotive Lever

—The Automatic Spacer
 —The Automatic Tabulator
 —The Disappearing Indicator
 —The Adjustable Paper Fingers
 —The Scientific Control Key

—Card Index Work
 —Follow-up Systems
 —Mounting Service
 —Addressing Envelopes
 —Working on Ruled Forms
 —Quill and Microscopic Stencils

Can you spend 17 cents a day to better advantage than in the purchase of this wonderful machine?

Write for Special "Easy Payment Proposition" or see the nearest Oliver Agent.
