The question of good road in this state is pushed way in the back-ground, and irrigation occupies the public thought as of more importance than any thing else. Irrigation serves a two-fold purpose. It insures good crops upon all the lands that are under the ditch and at the same time increases evaporation. That in time augments precipitation, and the rain falls upon the just and the unjust, and produces the second good to the state. With the great valley lands of Nebraska provided with good irrigation ditches, nature can be depended on to take care of the hills and table lands, and when nature does her full duty the mortgage loses its terrors and the per capita of circulation enables us all to do business on a cash basis .- State Journal.
