COUNTY.

Representative, J. E. Hathorn
County Judge, S. L. Green
County Attorney, C. E. Eldred
Commissioner—First district, D. A. Waterman

NEXT in nobility and strenuousness to making an honest man is the keeping of him honest.

MEN who live by the sword die by the sword—and sometimes as in Tracy's case—they provide their own sword.

KEARNEY county farmers own and operate eighty threshing machines, this season, a machine for each six sections in the county.

THE TRIBUNE has small concern about an impending millennium. The evolution of man is too slow. It has taken thousands of years to evolve man to his present estate—and the process is evidently but just fairly under way.

BANDIT Tracy's race is run. Run down and fatally wounded by a posse of five citizens of a little burg named Creston, he crawled into a wheat field and after an attempt to staunch the flow of blood from his wounds received in a hot running fight with the posse, killed himself.

In public affairs secret or executive sessions, star chambers and the like, may in instances accomplish good and desirable results, but the tendency is dangerous, and should most certainly be held within reasonable, very reasonable, bounds. Proper publicity is a great safeguard in public affairs and its effective operations should be broadened—not lessened.

THAT the trusts are creating distrust is evident to every observer of the times, and that thoughtful and patriotic men are giving the matter close and careful and intelligent attention is as well known. Perhaps no one has been more earnestly engaged on the problem than is President Roosevelt, who has practical ideas on public questions and plain and direct ways of stating them. His course is being somewhat widely "guessed" in the daily press, but is probably best outlined by the following lines from his message of last December: "Publicity is the only sure remedy which we can now invoke. What further remedies are needed in the way of governmental regulation or taxation can only be determined after publicity has been obtained by process of law and in course of administration. The first requisite is knowledge, full and complete—knowledge which may be made public to the world."

GEORGE W. NORRIS, the Republican candidate for congress from the Fifth district, has himself to thank for whatever success or distinction he may have achieved in life. And he certainly has claim to both, for it is both successful and distinguishing for a Republican to be twice elected to the office of district judge in a section of the state where the opposition usually has things its own way. Judge Norris has just turned 41, having been born in Sanduska county, Ohio, in July, 1861. Here he grew up, his boyhood being a hard one because of the death of his father when he was quite young. He worked as a farm hand during the summer and attended school during the winter until he fitted himself to teach. Later he attended a normal school at Valparaiso, Indiana, and Baldwin university at Berea, Ohio. During his time as a teacher he was studying law, and after leaving the university he went into a lawyer's office for a season and then attended a law school. Two more years of teaching gave him funds to purchase a library and begin his practice. In 1885 he opened a law office and continued his profession for ten years, when he was elected district judge, and is still on the bench. Personally Judge Norris is described as one of the most popular of men, his popularity being due to his well recognized ability, his keen sense of right and justice, rather than any effort of the man himself in the cultivation of public and private endorsement. He has won public approval by his course on the bench, and his nomination at the Hastings convention was a tribute paid to his worth by his party.—Stockville Republican.

Advertised Letters.

The following letters were advertised by the McCook postoffice, Aug. 4, 1902:
Miss Lydia Biggs, Albert Williams
A. J. Fontmore, Charles Frances
Anna Harris, E. C. Munsey
John Mostly, Wm. Trenhall, Jr.
Advertised August 7, 1902:
Mrs. Emily Clark, J. J. Grundy
C. K. Jesse, S. N. Johnson
T. J. Mack, E. T. Makasko
Shaks Mesivair

When calling for these letters, please say they were advertised.

F. M. KIMMELL, Postmaster.

Kodol

Dyspepsia Cure

Digests what you eat.

This preparation contains all of the digestants and digests all kinds of food. It gives instant relief and never fails to cure. It allows you to eat all the food you want. By its use many thousands of dyspeptics have been cured after everything else failed. It prevents formation of gas on the stomach, relieving all distress after eating. Dieting unnecessary. Pleasant to take.

It can't help but do you good

Prepared only by E. O. DeWitt & Co., Chicago. The \$1. bottle contains 2 1/2 times the 50c. size.

CITY CHURCH ANNOUNCEMENTS.

EVENING SESSION.
7:30—B. Y. P. U. prayer meeting.
8:30—Song, same.
8:15—The coming conquerors.
Pres. Geo. Sutherland

The Progress in Irrigation.

WASHINGTON, D. C.—The progress in agriculture in the arid states and territories during the decade ending with 1899 is shown in the report just published by the Division of Agriculture of the Twelfth Census. As this progress is attributable largely to irrigation, the statistics relating thereto are of general interest.

The number of irrigators in the United States in 1899, not including irrigators of rice, was 108,218, an increase in ten years of 99.9 per cent. The area irrigated was 7,539,545 acres, an increase of 107.6 per cent. Of this area, 5,944,412 acres were in crops, and 1,595,133 acres in pasture and unimproved lands. The cost of irrigation systems in operation, exclusive of those on rice plantations, was \$67,770,942 while the value of the irrigated crops was \$85,300,491.

The total length of all the main ditches in the arid and semi-arid states and territories was 44,149 miles.

The average number of irrigated acres in farms in arid states and territories was 71; the average value of irrigated land per acre, \$42.53; the average value of crops produced on irrigated land, \$14.81; the average first cost of water, \$7.80; the average annual cost of maintenance, \$0.53. Of the 5,711,905 acres in crops, hay and forage occupied 3,005,054, or 52.6 per cent; cereals, 1,369,708, or 23.8 per cent; vegetables, 108,452, or 1.9 per cent; orchard fruits, 251,289, or 4.4 per cent; other crops, 236,881, or 4.1 per cent. The value of the hay and forage was \$34,834; cereals, \$14,338,320; vegetables, \$9,627,491; orchard fruits, \$8,920,409; other crops, including subtropical fruits, grapes, flowers, plants, sugar beets, etc., \$16,712,246.

In Nebraska the number of irrigators increased 214 in 1889 to 1,932 in 1899, or 802.3 per cent, and the number of acres irrigated from 11,744 to 148,538, or 1,164.8 per cent. The ditches in operation in 1899 had a length of 1,701 miles cost \$1,276,978 and irrigated 147,695 acres. There were 843 acres irrigated from wells. The irrigated area in crops was 829,726 acres, yielding products valued at \$982,615. The area irrigated in pasture and unimproved crops was 18,812 acres.

Shortly after sending the irrigation bill to the president, congress passed a resolution authorizing the director of the census to compile statistics relating to irrigation for the crop year of 1902. With the data now assembled, this work will be comparatively simple, most of it being done by correspondence. To secure this information inquiries will soon be sent out to irrigators throughout the United States. The cooperation of those interested in irrigation is earnestly solicited for upon their prompt response will depend very largely the value of these statistics. This is in part a supplementary work, the results which will be utilized in the work soon to be undertaken by the department of the interior under the provisions of the irrigation bill.

FASCINATING DANGER.

The Perils That Beset the Builders of Big Bridges.

The design of a long bridge span is one of the most elaborate mathematical problems that arise in constructive work. The stresses produced by its own weight, by the weight of traffic, by locomotive drivers, by the hammering of flattened wheels, by the action of brakes on an express train, by the high speed on a curved track, by the wind and by the expansion and contraction of the steel in summer and winter are all accurately calculated. The deflection of the loaded and unloaded bridge is determined, and complete drawings are made of every member of it. The bars of steel are tested in machines which will pull in two a horsehair or a steel bar strong enough to lift half a score of the heaviest locomotives at once, and which will crush an eggshell or a steel column, and accurately measure the stress in each case. The different kinds of members are forged, riveted, bored, or planed in perhaps half a dozen remote shops, and although usually not fitted together here, are examined and measured by specialists to see that they are correct, and are then shipped by scores of carloads to the site of the proposed structure, where steam derricks unload them and pile them many feet high in stacks covering acres of ground.

The bridge piers may rise above the water hundreds of feet apart. It remains to place them on a thousand ton structure, high above a savage chasm, over an impassable current or roaring tide, where the water is deep, the bottom of jagged rocks or treacherous quicksand, or where an old bridge must be removed and the new one built in its place without interrupting traffic on the bridge. To accomplish this the engineer has timber, bolts and ropes, hoisting engines, derricks and a band of intrepid builders who have perhaps followed him for years through more hardship and danger than fall to the lot of almost any other calling.

The complicated framework of a great span is a skeleton with many accurate joints and thousands of steel sinews and bones, each of which must go in exactly the right place in exactly the right order. The builder must weave into the trusses pieces larger, heavier and far more inflexible than whole tree trunks, swiftly hoisted and swung them to place hundreds of feet high, fit together the massive girders and huge forged bars with watchmaker's accuracy, support the unwieldy masses until they are keyed together and self sustaining, and under millions of pounds of stress must adjust them at dizzy heights to mathematical lines. This he may need to do not deliberately, but in dangerous emergencies, at utmost speed, putting forth his whole strength on narrow, springing planks in a furious tempest, in bitter cold or in blazing heat. He may be in the heart of an African desert, menaced by bloodthirsty fanatics, or in a gorge of the Andes, hundreds of miles from tools or supplies, where there is absolutely no supplement to his own resources. Under such conditions bridge building is one of the most fascinating and difficult of engineering problems and requires a different solution for almost every case.—Frank W. Skinner in Century.

Bells.

It was long a fixed idea that silver mixed with the bell metal improved the tone, but this is now considered incorrect. The Acton Nightingale and Silver Bell, two singularly sweet bells at St. John's college, Cambridge, are said to have a mixture of silver, but if true this is not believed by competent authorities to be the cause of their beautiful tone. This idea led to the story of the monk Tandio concealing the silver given him by Charlemagne and casting the bell in the monastery of St. Paul of inferior metal, whereupon he was struck by the clapper and killed. In the ninth century bells were made in France of iron. They have been cast in steel, and the tone has been found nearly equal in fineness to that of the bell metal, but, having less vibration, was deficient in length, and thick glass bells have been made which give a beautiful sound, but are too brittle to long withstand the strokes of the clapper.—Gentleman's Magazine.

The Inventor of the Match.

The first match was the product of the ingenuity of John Frederick Kommer, who early in the nineteenth century was imprisoned in the penitentiary at Hohenasperg, in Germany. He invented the lucifer match while in his gloomy dungeon. The German government forbade the manufacture of matches on the ground of public policy, because some children playing with them had caused a fire. Kommer was ruined by Viennese competition when he was released from prison and died a pauper. Up to 1862 the Vienna manufacturers controlled the match business of the entire world.

From Real Life.

Teacher—Evil communications corrupt good manners. Now, Johnny, can you understand what that means?
Johnny—Yes'm. For instance, pa got a communication from ma's dressmaker this morning that made him swear.—Philadelphia Press.

A Pert Reminder.

Little Bertie had been taught not to ask for anything at meals. One day poor Bertie had been forgotten, when he pathetically inquired, "Do little boys get to heaven when they are starved to death?"—London Tit-Bits.

The gravedigger rises to remark that every man finds himself in a hole sooner or later.—Philadelphia Record.

The next hardest thing to getting up in the world is to keep from getting down.

WHEN BABY IS COMING USE Mother's Friend

Woman's greatest dream of beauty and glory is when nature has chosen her to become a mother. Every faculty is keenly alert as she foresees the joy, ambition, success and the life-long satisfaction coming nearer, day by day, in the dear and innocent being so soon to see light, and the uncertainty whether she shall see a sweet girl or a brave boy face beside her on the pillow adds zest to her expectancy. Mother's Friend applied externally throughout pregnancy will relieve the pain of parturition, and no mother and child can fail to be healthy, hearty, strong, clear complexioned, pure blooded and cheerful in disposition, who are mutually influenced by the continued use of this great liniment, MOTHER'S FRIEND. Day of druggists, \$1.00 per bottle. Our treatise "Motherhood" mailed free. THE BRADFORD REGULATOR CO., Atlanta, Ga.

Depredations of Tax Collectors.

CITIZENS of McCook and adjoining counties of Texas are in a state of terror because of the depredations of coyotes, which are killing scores of cattle. Worse than that, the slinking rutes are spreading hydrophobia among the stock. A man living in Tilden was bitten by an infected coit and died in a few days. Ways and means of getting rid of the pests are being considered.

COURT HOUSE NEWS.

JULY MORTGAGE RECORD.
Farm filings, 2—\$600; releases, 4—\$1,006. City and town filings, 4—\$2,697.75; releases, 5—\$2,530. Chattel filings, 62—\$35,249.20; releases, 98—\$31,254.87.

Commissioners' Proceedings.

McCook, Nebraska, August 5, 1902. Board of county commissioners met pursuant to adjournment. Present, D. A. Waterman, Chairman; H. Bennett, county commissioners; W. R. Starr, county attorney, and E. J. Wilcox, county clerk. The minutes of the previous meeting were read and on motion approved. On motion John R. Tate was appointed road overseer for district No. 27. On motion the official bond of John R. Tate, road overseer for district No. 27, was approved. On motion the treasurer was instructed to refund the sum of \$8 to George Rehmeyer, the amount of poll tax illegally assessed to him in 1901 and paid by him under protest. On motion the treasurer was instructed to refund to George Mick the sum of \$3; the amount of poll tax illegally assessed to him in 1901 and paid by him under protest. On motion the treasurer was instructed to refund to R. J. Kipp the sum of \$8; the amount of poll tax illegally assessed to him in 1901 and paid by him under protest. On motion the treasurer was instructed to refund to M. M. Delahunty the sum of \$15.32 the amount of taxes erroneously assessed to her in 1901 and paid by her under protest. On motion the treasurer was instructed to refund to John Florin the sum of \$4.76 the amount of taxes erroneously assessed to him in 1901 and paid by him under protest. In the matter of the sealed bids for the construction and furnishing material for the wagon bridge across the southern river southwest of McCook, the board finds after careful examination that the bid of H. T. Ward & Co. is the lowest and best and on motion same was accepted and contract entered into with them. Amount of bid for bridge complete \$12,000. In the matter of the sealed bids for rebuilding, repairing and furnishing material for the bridge across the Republican river southwest of McCook, the board finds after careful examination that the bid of H. T. Ward & Co. is the lowest and best, (amount of bid, \$60,000) and on motion same was accepted and contract entered into with them. The following claims were audited and allowed and on motion clerk was instructed to draw warrants on the county general fund levy of 1902, in payment thereof as follows: E. G. Cain & Co., coal for paupers, \$ 3 75 W. N. Cratty, same, 17 50 W. C. Bullard & Co., coal for paupers, 14 55 William McCullum, mdse. for paupers, 6 00 A. Guy, same, 6 00 Smith & Cochran, same, 31 10 N. J. Verling, same, 19 00 J. A. Wilcox, same, 9 55 Social Union, medical pauper, 17 50 J. M. Brown, services as physician, 50 00 Andrew Phillips, salary as janitor for July 25 00 R. M. Osborn, drygoods, 1 25 Folk Bros., labor on courthouse roof, 19 37 W. T. Coleman, hardware, 19 37 A. C. Wilson, surveying road No. 363, 14 20 S. S. Graham, chairman, road No. 363, 5 20 James Williams, same, 5 20 James Williams, axman, road No. 363, 5 20 State Journal Co., advertising bids for 12 bridges, 26 00 State Journal Co., supplies, 26 00 G. C. Boatman, postage and office expenses, 12 00 A. C. Crutcher, same, 8 00 E. J. Wilcox, same, 5 80 O. L. Thompson, railroad fare advanced for bridge, 7 50 D. A. Waterman, commissioner service and mileage, 34 80 Maurine Reddy, same, 32 00 J. H. Bennett, same, 32 00 and on county bridge fund, levy 1902, as follows: W. H. Rinck, bridge work, \$ 4 50 J. C. Longacker, same, 2 50 C. H. Angell, same, 3 25 H. J. Hall, same, 4 50 Guy Battershall, same, 1 50 Peter Hummer, same, 1 50 A. W. Dutcher, same, 3 00 Isaac Cromwell, same, 3 00 W. N.
