A Factory Chapel.
For more than half a century the lace manufacturing firm of Messrs. Thomas Adams & Co., Nottingham, England, have insisted on all their work people—who number some hundreds of both sexes, attending a short service each morning prior to commencing their day's work. The firm have a large chapel underneath their warehouse, with an excellent organ, while the choir, composed of their own employees, is one that would do credit to many of our leading places of worship. A local clergyman attends each morning for the service, which usually lasts about half an hour, and a sermon is preached three times a week.

Dog Announces Crossings.
A blind man and a spaniel dog leading him with the aid of chain furnished a curious sight on Chestnut street the other day. A RATTLESNAKE'S BITE.

How, Under Some Conditions, It May Not Kill the Victim.
It may seem absurd to claim that there are cases where the bite of a rattlesnake is not fatal yet such have happened, and to understand these it is necessary only to understand the manner in which this reptile strikes.

The spectacle of a rattlesnake at bay is one a beholder never forgets. The great, long body lies coiled in a tense spiral, the very embodiment of wickedness. Poised in air, the white bellied body is bent into a horizontal S.

Raised from the middle of the spiral is the tail, quivering like a twanged banjo string and emitting a rattle like steam escaping from the pet cock of a radiator or like the sound of a moving machine in a distant hayfield. Awe inspiring, the dread, flat, triangular head, eyes gleaming black and cold as icy steel, is ready to strike.

As the greivous mouth opens wide and pink, the long, thin poison fangs arise from a horizontal position and stand upright like a pair of slender, curved, needle pointed shad bones, ready for business. Like a flash, far too quick for the eye to follow, the snake strikes, sending home its fangs an inch or two, and in that same fraction of an instant he has squirted a tablespoonful of canary yellow, viscid fluid into the wound and lies coiled ready for a second attack.

In this incomprehensibly swift attack lies the answer why sometimes the bite of a rattler is not fatal, for so wonderfully swift is the attack that a bite may be imperfect, leaving only a pair of tiny needle punctures with just enough venom to make a victim seriously ill.

Another reason why a rattlesnake's bite is not always fatal is that temporarily the reptile may be without venom. The snake may have exhausted its poison on a previous enemy, in which case it would have to wait several days before the deadly fluid has reaccumulated, or, again, the viper's fangs may have suffered accident. They may have been broken off and require time for new growth. In any case, certain it is that a rattlesnake's poison applied in the proper way will do its work, and then only the most expert and prompt assistance will save a victim.—A. W. Rolker in Pearson's Magazine.
