Men Past Fifty in Danger.

Men past middle life have found comfort and relief in Foley's Kidney Remedy, especially for enlarged prostate gland, which is very common among elderly men. L. E. Morris, Dexter, Ky., writes: "Up to a year ago my father suffered from kidney and bladder trouble and several physicians pronounced it enlargement of the prostate gland and advised an operation. On account of age we were afraid he could not stand it and I recommended Foley's Kidney Remedy, and the first bottle relieved him, and after taking the second bottle he was no longer troubled with his complaint. A. McMillen, Druggist."

A chautauqua is one of the things that help to lift us out of the depths of sordidness to a broader and better plane of being. It is a good thing for us to think the thoughts and experience the emotions which are throbbing in the minds and hearts of others. It may cost a little, but one new idea that gives new impulse to larger life is worth more than the silver it costs. One emotion which sets the heart singing with better purposes is of more value than many coins.

BETTER THAN LAXATIVES

Ordinary pills, cathartics and purgatives, cause griping, nausea, and distressing and injurious after effects that are frequently life-lasting. You may have your money back for the mere asking if Rexall Orderlies do not overcome constipation and fully restore the intestines to regular activity and good health. They are eaten like candy, and can be taken day or night. They positively do not cause nausea, griping or any discomfort whatever. Two sizes, 10c. and 25c.

L. W. McConnell, The Rexall Store.

Everyone would be benefited by taking Foley's Orino Laxative for constipation, stomach and liver trouble, as it sweetens the stomach and breath, gently stimulates the liver and regulates the bowels and is much superior to pills and ordinary laxatives. Why not try Foley's Orino Laxative today? A. McMillen, Druggist.

CENTRIFUGAL FORCE.

Some of the Wonderful Properties of Rapidly Revolving Bodies.

It is probably well known to our readers that by means of revolving soft copper disks, the edges of which are served with diamond dust by beating it in, diamonds can be sawed up. By means of sharp rapidly revolving iron disks it is possible to cut through heavy steel armor plates of four to eight inches in thickness. These phenomena belong to a very interesting department in physics, the physics of revolving bodies, that doubtless still has a great deal that is remarkable to offer. The rotation of a wheel results in the phenomenon that keeps the wheelman or bicyclist without exertion free on his seat—i. e., the so called free axis. We can also observe it easily in a top, which, its equilibrium disturbed, as long as the rotation is rapid enough always resumes a certain position in regard to its axis without requiring pivot bearings. Rotation also exercises a tension producing effect on the substance of a revolving body, and it is this tension that imparts to the soft saws referred to their notable efficiency. If, for instance, a disk of thin cardboard is caused by a suitable transmission to rotate very rapidly on the lathe the rotatory tension causes the card to behave like sheet metal.

As the *Naturwissenschaftliche Wochenschrift* states, the cardboard can in such case no longer be bent and if struck with a hammer gives off a sound as though we were striking bronze. This is, however, only the beginning. If we place on the shaft of an electromotor a disk of good paper, cut into an exact circle about eight inches in diameter, this paper disk can be made at the highest rotating speed of the motor to saw through cigar box wood. At the cutting surface it acquires a fine brown polish. The publication in question shows other interesting experiments. We can, for instance, fit on the shaft of the rotatory apparatus a drum, about which may be passed an annular closed little chain in such a manner that at the highest rotatory speed of which the motor is capable it will be slipped off the drum. The chain will then behave like a solid ring, roll across the table and when it strikes the ground bounce up like a hoop. The active principle on which all these tension phenomena are based is centrifugal force.

BASEBALL STRATEGY.

A Bit of Quick Thinking and Good Play on the Diamond.

The quickest thinking I ever saw on a baseball field was done by Tommy McCarthy, the Boston outfielder of years ago. Tom Browne, one of the speediest runners that ever played baseball, was on second base, and New York needed one run to tie the score. Jack Doyle, then a great batter, was at bat, and it seemed certain that a base hit by Doyle would tie the score and perhaps win the game, as there was but one out, and Browne was so speedy he could score from second base on almost any kind of a safe hit. McCarthy crept closer to the infield on left, realizing that, although he could throw with wonderful rapidity and accuracy, the chances were all against throwing Browne out at the plate unless he was close and the ball came to him quickly. Doyle drove a hard line hit straight to the left field. Browne went scudding toward third base. Doyle raced for first, and McCarthy plunged forward at top speed. The fielder reached the ball on its first bound, grabbed it and without stopping or looking threw with terrific force and perfect aim across the diamond into the first baseman's hands. Browne had stopped at third base. Doyle, who had turned first with the intention of sprinting to second, was caught standing still ten feet from first. The next batter went out on a fly, and Boston won the game.

After the game I asked McCarthy concerning the play. "Well," he explained, "Browne is a quick thinker. He saw just how hard that ball was hit and knew he would be thrown out at the plate unless I fumbled. Doyle doesn't think very fast, and, knowing that he would turn first and stop to see if I was throwing home, I threw across to first and caught him."

He figured that out while the ball was screaming through the air toward him, probably reaching his conclusions and making the decision in four-fifths of a second.—Hugh S. Fullerton in *American Magazine*.

"Handle With Care."

In her assumed character of mother little Miss Dorothy, "going on five," spanked her new doll so vigorously that the eyes dropped out. This accident seemed to make quite an impression on the young lady, and when it came her turn to be reproved in the good old fashioned way a few days later she glanced up from her mother's knee as the exercises were about to begin and plaintively observed: "Better not spank too hard, mamma. 'Member what happened to the doll?"—Philadelphia Ledger.

A Familiar Trait.

Quaker Oats Griddle Cakes

Try them today!

The family that hasn't eaten Quaker Oats griddle cakes has a delightful surprise coming to it. Besides the delicious flavor, there is the pleasure of knowing you can eat all you want, and the more you eat the better for you. The best of all foods for anyone wanting more strength and vigor.

Hundreds of thousands of packages of Quaker Oats are consumed in Germany annually and almost all of it is eaten in the form of Quaker Oats griddle cakes. In the New York cereal restaurant of the Quaker Oats Company these griddle cakes are very popular.

Here's the best recipe for making them:

2 cups Quaker Oats (uncooked); 1 1/2 cup flour; 1 teaspoonful salt; 1 teaspoonful soda—dissolve in two tablespoonfuls hot water; 1 teaspoonful baking powder (mix in flour); 2 1/2 cups sour milk or buttermilk; 2 eggs beaten lightly; 1 tablespoonful sugar; 1 or 2 tablespoonfuls melted butter (according to richness of milk).

Process: Soak Quaker Oats over night in milk. In the morning mix and sift flour, soda, sugar and salt—add this to Quaker Oats mixture and quantity of melted butter; add eggs beaten lightly—beat thoroughly and cook as griddle cakes—they make your mouth water for more.
