

THE COMERS AND GOERS

HAPPENINGS OF INTEREST TO YOU AND ME.

What Your Friends and Their Friends Have Been Doing the Past Week.

—Eat Sowle's Candy.
Fishing was good Monday.
—Dr. Wilson, Wahl's building.
—The Candy Kitchen for brick ice cream.
John Chism of Stella was in town Monday.

Less Leeds is enjoying a vacation in old Missouri.

Jno. Cornford and family will move to Iowa in the near future.

—If it's shoes you want, call at the Home Shoe store. 14-1t

Stephen B. Miles is enjoying a stay at Excelsior Springs, Mo.

Miss Lela Powell spent a part of this week with Hiawatha friends.

James Ayers of Verdon attended the play at the Airdome Monday night.

Mrs. Jessie Watson of Reserve is a new clerk at Lyford's department store.

—Choice styles of linen and cotton skirts at \$1, \$1.50, \$2 and up to \$5 at Lyford's.

Miss Kattie Cashman of Barnston, Nebraska, will arrive here Sunday to visit relatives.

The familiar figure of Mayor Keeling may again be seen agitating our unpaved streets.

Miss Lois Spencer entertained her friend, Miss Ruth Rummel of Reserve during the week.

Mrs. Frank Werner left Wednesday for a visit to relatives and friends in Greenleaf, Kansas.

Miss Inez Wachtel is home from Peru, where she has been attending the summer school.

Miss Lena Nettlebeck returned the last of the week from a visit to relatives in St. Joseph.

Mrs. G. W. Reneker and daughter, Helen Ruth, returned this week from their visit to relatives at Troy.

Mrs. Hannah Shulenberg and son, Herbert, left Sunday for an extended visit with relatives in Oklahoma.

Mrs. Esburn Wheeler of Stella Nebraska spent a few days with Mr. and Mrs. H. M. Jenne this week.

Miss Florence Judd left the last of the week for a month's visit with relatives at Dawson and other points.

The chautauqua program offers a variety of talent of a very high grade this year. You will not want to miss it.

Mrs. Frank Knickerbocker is acting in the capacity of compositor on the Daily Journal. She took up the work Monday.

Mrs. Daisy King returned Monday from Omaha where she has spent several weeks with her sister, Mrs. Bruno Hanson.

V. G. Lyford left this week for the eastern markets to purchase his fall and winter stock. He will be absent several days.

Mrs. S. Lichty and daughter, Ruth, are expected home from Lincoln tomorrow, where they have been visiting friends the past week.

The heat came very near getting away with Wm. McCray while haying. He will cease agitating the strenuous life until after the hot season.

Mrs. Mary McKiever and daughter, Miss Mazie will arrive in this city Sunday from Chicago for an extended visit with relatives and friends.

Miss Louise Peterson is visiting her sister, Mrs. Parriott in Peru. She is enjoying a vacation from her duties at V. G. Lyford's department store.

Miss Emma Grant returned Saturday from Rulo, where she has had charge of the Kelster College for several weeks. The term closed Friday.

—We are buying apples, peaches, and plums at the warehouse near the mill. Let us know what you have to offer. Call phone 396 or 318a.—Heck & Wamsley.

Railroads are announcing that they will make a cheap rate to the Interstate Live Stock show to be held in St. Joseph the last week in September.

John W. Towle came down from Omaha the latter part of the week to visit his parents, Mr. and Mrs. E. S. Towle, and to look after some business matters.

New Shoe Repairing Shop

In connection with our Shoe Store we have installed a Shoe Repairing Shop, and have in charge a first-class, up-to-date workman. Bring in your old shoes and have them fixed up at reasonable prices.

Half Soles 50 & 65c
Heels 25c

The best leather used in all repairing.

NOTES FROM MEADOWBROOK FARM

By William Pitt

Sheep are excellent farm cleaners.

The bruise on an apple is injurious.

Lice and mites come with warm weather.

Tie the grape vines to the trellis wires before the vines begin to run.

No well bred farmer ever contents himself with scrub stock or poor crops.

It is a sad mistake for a man to make a good crop of grass into poor hay.

Pure fresh air, day and night, is one of the prime essentials for keeping fowls in good health.

Most separators do their best work with the milk at a temperature of from 85 degrees to 95 degrees Fahrenheit.

When the cream has been held at churning temperature for a period of two or three hours, it is ready to be churned.

A good way to keep manure for the garden is to fill a large box, turning it over with a fork about once a week and keeping it moist.

The government is sending out experts to various parts of the country to teach fruit growers the best methods of spraying their trees.

When shrubs are first planted they should be headed back one-half or more, but after they become established they should be allowed to branch at will.

One of the prominent symptoms of shoulder lameness in horses is a difficulty of lifting and extending the limb, which is particularly noticeable when the patient is urged to trot.

The flea beetle is a small, metallic blue insect which is destructive to the fruit both as the larva and the adult. Spraying with arsenate of lead or paris green is generally effective.

Some of the amber honeys are made from the aster, goldenrod, bonaset, queen of the meadow, heartsease, wild sunflower, Spanish needle, sumac, magnolia and marigold.

The earliest sown lettuce should be of some of the loose growing varieties. For summer use plant cabbage lettuce, or heading varieties, as the leaves during the warm season will be whiter and more crisp.

Soy beans shed their leaves before the grain begins to ripen; therefore when hay is desired the plants must be cut when half or more of the pods are fully grown, but before the beans begin to harden.

In cutting rape for soiling it is best to cut about four inches from the ground. It is advisable to arrange the cutting so that each day's product will be consumed within that time, as the foliage soon wilts and is then not relished so much.

The sitting hen must not be disturbed. If eggs are laid in the same nest with those that are hatching it is often difficult to tell the fresh one from the others, hence partly hatched eggs are taken out instead of the fresh ones.

It is a well known fact among farmers and fruit growers that blackberries improve the physical nature of the soil through their root action. When they are removed from the apple orchard the soil is left in ideal condition for the outer feeding roots of the apple trees.

While it is conceded that permanent maintenance of soil fertility without live stock is possible, it is not practicable as a statewide policy, because it is not the highest type of agriculture and because few farmers can be induced to comply with all the conditions necessary to make it effective.

Plant cannas one to two feet apart, depending altogether if they be dwarf or the tall-growing sort. They like very rich soil and plenty of water during the growing season. A mulch of straw manure will help to conserve the water that is given them. Cut off all the seed pods as they form.

Root plants may be transplanted, but it is not advisable unless it were in the case of extra early beets started in the hotbed or turnip-rooted radishes lifted out at thinning time. The roots are usually ill shaped, yet their table quality is not injured. Long varieties always become distorted and are not marketable.

A clean cornfield honors and profits its owner.

Turning under cowpeas adds humus to the soil.

An acre of good land will grow many tons of stock beets.

Warm weather is coming and you will need a good, cool place for milk and cream.

Many farmers make the mistake of planting their apple trees too close together.

An easy way to secure new grape vines is to propagate them by layering.

Keep dusting the setting hen with insect powder, before and after she hatches her chicks.

The careful man will turn and examine the udders of all his ewes intended for breeding.

Never allow the fowls to drink from a stream into which the poultry yards and barn yards drain.

The man who desires large profits from his flock should provide it with the best that good management will produce.

If you have no silo and cannot build one this year then plant an acre or more of beets or other roots for winter green feed for the dairy cows.

Select a dairy breed of cattle whose product and offspring will bring the highest possible price in any market, and you will surely be successful in dairying.

But sometimes the large gray louse gets into the head and under the wings of the chicks, then it is best to rub these parts with grease of some kind. Lard and carbolic acid is good.

Developing of new sections in several of the states of the middle west for dairy purposes in itself will call for more extra dairy cows than all the country can possibly furnish.

A mixed grain ration of corn and oats, when fed with clover hay, is more efficient than a single grain ration of corn for producing large gains in an 84-day feeding period.

Look well to a supply of autumn bloomers by planting a bed or asters. The aster has an almost endless variety of colorings and blooms when most other flowers are past their season of beauty.

Clover hay, when fed with a mixed grain ration of corn and oats, is more efficient for producing gains than timothy hay. In this test clover hay produced 58 per cent. more gains than timothy.

While box stalls are safer than single stalls for stabling horses, they are also more expensive and do not offer merits not possessed by single stalls so far as they may influence the horse in taking on flesh.

It is not reasonable to expect strong and healthy chicks from immature, weak and unhealthy parents. Standard, healthy and vigorous breeding stock is the foundation of successful hatches.

When being fattened wether lambs should have some succulent food in their ration, for the reason that they will remain healthier and not be troubled with the common disorder called stretches and will usually make a better gain.

You cannot afford to keep poor cows and the best way to get good ones is to raise them yourself. Breed the cows you have to a full-blooded dairy male. If you cannot secure the services of one go in with some of your neighbors and buy one in partnership.

With favorable soil and climatic conditions good crops of rape may be obtained from broadcast seeding, but whenever there is any danger of the surface soil becoming very dry during the time the seed is germinating or when land is at all foul, drilling will give much better results.

Grapes propagated from layering come true to name. Hence when you start new grape plants in this way choose canes from your best varieties. Well-rooted young grape plants will begin to bear the third year after setting in a permanent row and with good cultivation and general good care, including proper annual pruning, they will bear good fruit every year, increasing in productivity with age.

In resetting plants it is of permanent importance to place the roots in the soil in as natural a position as possible, a little deeper than they grew in the original bed, making the soil hold them fast, fan shaped and firm. Holes too deep or holes too shallow are both objectionable, the one being too apt not to be closed at the bottom, the other forcing the roots into a matted condition.

The way to reclaim a gully or an unnecessary ditch in a field is to fill it with trash and keep it filled. The trash will hold it from washing any wider or deeper and will gradually catch all soil and sediment that washes into it. By and by it will become filled with trash and soil and when the trash decays this soil will become the best in the field—deep, porous and full of the best available plant foods.

Grand Opening

The New Zimmerman Music House has thrown its doors wide open, and in the fullest sense are now ready to serve the public in their line.

A full line of all kinds of Musical Instruments will be carried, together with extensive assortment of Sheet Music and musical supplies.

TWO CARLOADS High Grade Pianos just received and now ready for inspection.

Zimmerman MUSIC HOUSE

FALLS CITY, NEBRASKA

UNTIL JANUARY 1st SIX MONTHS
