## GOOD FOR MAN AND BEAST

WHAT DR. MORSMAN HAS TO SAY ABOUT EPSOM SALTS.

A Manufactured Product, Though Similar to the Product of Epsom Springs, Eng.

In the sixteenth century Epsom England became noted for the medicinal waters of its springs and it was the mecca of the sick and those "troubled with a humor of the blood," becoming soon a popular resort with reputation or great curative power for all diseases.

Some time later—1675—the water was evaporated and the salts so obtained were sold under the name of Epsom Salts, and this being the only known source of supply, they were highly esteemed and brought big prices. Hence the name "Epsom" as applied to this drug. The Germans call it, "Bittersaltz." The chemical name is "Magnesium Sulphate."

Chemists soon determined the nature of the compound and also discovered that it could be obtained from the evaporation of sea water by careful crystallization and the town of Epsom lost its medical prestige and its monopoly.

Now it is made chemically by treating magnesium bearing rocks with sulphuric acid. Dalmite is one of its native forms and in Germany an impure magnesium sulphate is found, called Kelsierite. In Maryland and Pennsylvania natural magnesium rocks are found in large veins. It is also a by-product in making carbonic acid gas. Epsom Salts are now very plentiful and cheap.

It is a cathartic, diuretic and refrigerant. The old belief that "salts cool the blood" had foundation in fact. It has been used with excellent results in fevers where a laxative was indicated and it is an efficient saline cathartic at all times. It is apt to produce a little griping and the taste is nauseous and bitter. This taste can be partly covered by lemon juice or by taking it in carbonate water, and there are a number of effervescent preparations that contain it. Abbott's Saline Laxative, which the physicians very kindly introduced to the public, is the effervescent Magnesium Sulphate of the British pharmacopoeia. All the mir-

eral waters, natural and artificial contain magnesium Sulphate.

The druggist buys Epsom Salts in barrels. He sells it to his customers in bulk if desired but usually put up in packages with label and directions for use. This is the best way to buy it for family use, because the box or carton keeps it from being wasted. It always hardens unless kept in very dry atmosphere, whether in box or barrel, but it is easily broken up. It will also effervesce on the surface; that is it turns white and powdery. That does not hurt it any. It has merely lost the water of crystallization by evaporation. Very many families keep this drug in the home all the time and aside from the unpleasant taste there is no better Saline cathartic for domestic use.

This salt is very largely used in veterinary practice and has superseded Glauber Salts, although the latter is cheaper.

A little Epsom Salts put in starch makes it stiffer and a stronger solution; in whitewash it makes it whiter and more brilliant. It used to be used in English mills for "loading" cotton goods to give them greater weight and firmness.
