Great credit is due her daughters, Misses Edith and Mildred who engineered the affair. A dainty two course lunch was served. At a late hour the company bade the hostess good-night, wishing her many happy returns of the day.

Dairy Product As Food.

The products of the dairy are perhaps the most useful articles included in the human diet. A meal made up of dishes into which no product of dairy cows enters would not be such as to inspire "the turnpike road to people's hearts I find lies through their mouths, or I mistake mankind." Take away the butter from the bread, the cream for the coffee and porridge, the shortening in the crust and the biscuits, the milk in the gravy and in the pudding, the cream for the desert and the various kinds of cheese which please and satisfy, then take away the cup of milk for the little one and the meal that would be left would be neither tempting nor nutritious.

The health of our people depends so much upon an adequate supply of pure dairy products that even a scarcity is always attended by suffering and death.

Butter is sometimes referred to as a luxury, this is a mistake. Butter is not a luxury but one of the necessities of life, and its composition is such that nothing can take its place and perform the same functions. It is nature's law, a law which man can imitate but cannot understand. Man cannot understand the needs of the human body as nature understands them.

The animal body is developed best when nourished by foods which have been little manipulated by man and machinery. Dairy products are, as a rule, consumed nearly as nature produced them. This is particularly true with milk upon which the growing body must depend. In the case of butter only a small percentage of other products are added to the fat extracted from the milk. Man only manipulates it in order to put it in convenient shape for use. It can still be termed a product of nature designed as only nature can design for use as food by the human body.—National Dairy Union, St. Paul, Minn.
