DEMAND CONCRETE FOR ALL ARTERIAL STREETS

The experience of hundreds of cities proves these facts about the merit of concrete for building arterial streets:

1. Concrete is lower in first cost than any other paving material of comparable quality.
2. Concrete is by far the most economical type of surface to maintain and lasts the longest.
3. Concrete is safe in any weather, drains quickly, increases visibility, improves appearance.
4. Concrete cuts your driving cost by saving on gas, tires and car repairs.

Insist on concrete for your streets.

Plattsmouth's oldest concrete street is now in its 14th year of service. Why not investigate this pavement? Ride over it and note that the surface has remained true and even and that it shows little wear, then ask your city officials for facts on annual maintenance costs. This study will show that this old street was a good investment. Concrete paving is an even better "buy" today
